opi-generator - Generate OPI Screens for Control System Studio

Wednesday, 26 April 2023 16:00 (5 minutes)

Control System Studio (CS-Studio) is currently in the process of transitioning from Eclipse RCP to the next UI framework called Phoebus. To ease the transition of OPI (Operator Interface) screens developed for Eclipse-based CS-Studio to Phoebus, the "opi-generator" package provides a solution that generates properly formatted XML files for both CS-Studio and Phoebus from the same Python script. "opi-generator" is designed with a mechanism that can handle the differences in XML formats supported by the two platforms, and it also offers customizable support for unified screen style configurations.
