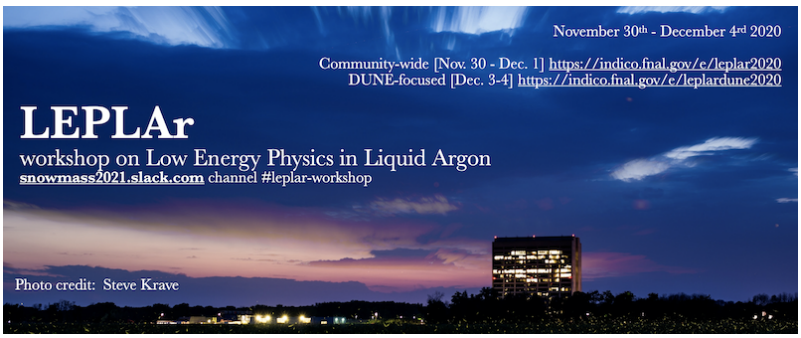
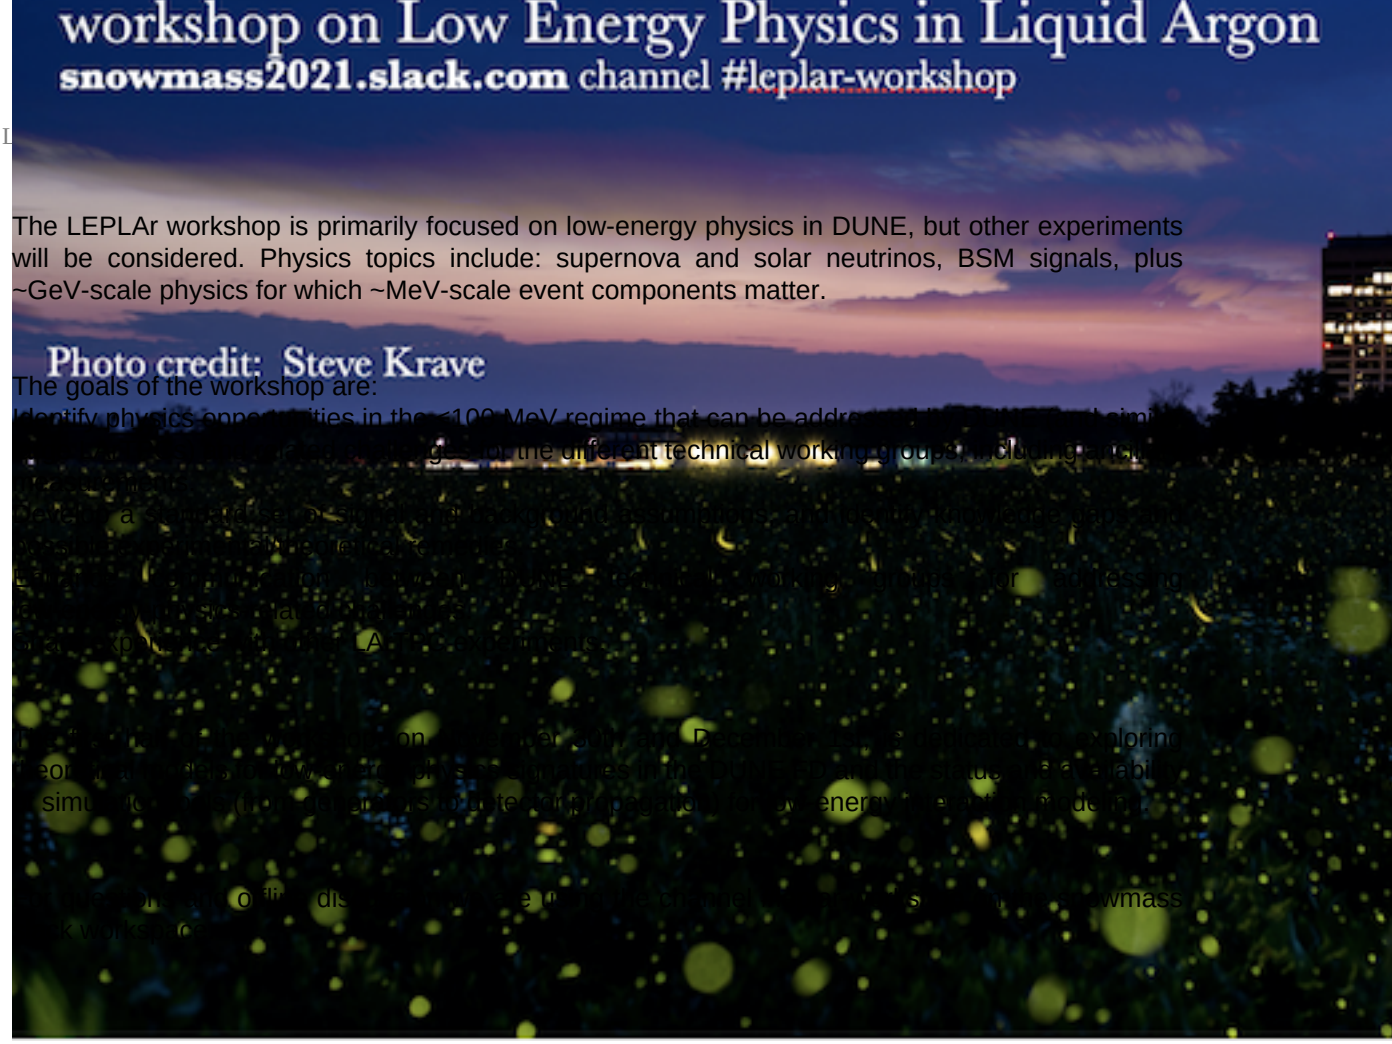
LEPLAr Workshop



Monday, 30 November 2020 - Tuesday, 1 December 2020

Scientific Programme



The LEPLAr workshop is primarily focused on low-energy physics in DUNE, but other experiments will be considered. Physics topics include: supernova and solar neutrinos, BSM signals, plus ~GeV-scale physics for which ~MeV-scale event components matter.

The goals of the workshop are:

Identify physics opportunities in the <100 MeV regime that can be addre[illegible] the different technical working groups [illegible]

[illegible]

[illegible] simu[illegible] energy [illegible]

[illegible] wmass [illegible]
