## Studies related to the PRISM-FFAG

Akira SATO
Dept.of Physics, Osaka University

FFAG ${ }^{\prime}$ 09: International Workshop on FFAGs September 21-25, 2009
Fermilab, Batavia, IL

## Contents

- Motivation of PRISM-FFAG
- Overview of R\&D results
- FFAG Design
- Magnet
- RF system
- 6-cell FFAG
- Phase rotation test
- PRISM Task Force (covered by Jaroslaw's talk)
- Study for FFAG ring cooler
- New Muon beamline(MUSIC) at Osaka Univ.
- Summary

## Japanese staging plan of $\mu$-e conversion

$$
B\left(\mu^{-}+A l \rightarrow e^{-}+A l\right)<10^{-16}
$$

- without a muon storage ring. (MECO-type)
- with a slowly-extracted pulsed proton beam.
- at the J-PARC NP Hall.
- for early realization (~2017)

The sensitivity is limited by backgrounds: pion induced electrons, decay in orbit electrons, and so on.

## 2nd Stage : PRISM/PRIME

$$
B\left(\mu^{-}+T i \rightarrow e^{-}+T i\right)<10^{-18}
$$

- with a muon storage ring.
- with a fast-extracted pulsed proton beam.
- need a new beamline and experimental hall.
- Ultimate search

A muon storage ring can solve the problem.

## PRISM : Super-muon source <br> PRIME : $\mu-\mathrm{N} \rightarrow \mathrm{e}-\mathrm{N}$ Search with PRISM

- Intensity : $10^{11}-10^{12} \mu \pm / \mathrm{sec}, 100-1000 \mathrm{~Hz}$
- Energy : $20 \pm 0.5 \mathrm{MeV}$ (=68 MeV/c)
- Purity : $\pi$ contamination < 10-20

## Phase rotation in PRISM-FFAG

- A technique of phase rotation is adopted.
- The phase rotation is to decelerate fast beam particles and accelerate slow beam particles by RF.
- To identify energy of beam particles, a time of flight (TOF) from the proton bunch is used.
- Fast particle comes earlier and slow particle comes late.
- Proton beam pulse should be narrow (< 10 nsec ).
- Phase rotation is a wellestablished technique, but we need to apply this to a low energy muons ( $\mathrm{P}_{\mu} \sim 68 \mathrm{MeV} / \mathrm{c}$ ) for stopping muon experiments.

- Large transverse acceptance
- Horizontal : 38,000 $\pi \mathrm{mm}$ mrad
- Vertical : 5,700 $\pi \mathrm{mm}$ mrad
- High field gradient RF system
- field gradient $\sim 170 \mathrm{kV} / \mathrm{m}$ ( $\sim 2 \mathrm{MV} /$ turn)
- quick phase rotation ( $\sim 1.5 \mu \mathrm{~s}$ )
- large mom. acceptance (68MeV/c +- 20\%)

## Expected phase rotation with PRISM-FFAG

## The First PRISM-FFAG Magnet

## Results of Field Measurements

The RF system

## Field gradient of PRISM-FFAG

Proton Synchrotron RF System

## How to realize the 4 MHz sawtooth RF

- Requirements on RF system for PRISM-FFAG
- high field gradient : >170kV/m @4MHz
- Sawtooth-RF
- Magnetic Alloy cores have been adopted
- $\mathrm{Q}<1$ : enable to add higher harmonics
- large aperture is possible
- Adjust the frequency

- Solution 1 : cut core
- used in RF cores for J-PARC MR
- too expensive for PRISM-cores due to their size
- Solution 2 : hybrid RF system
- tested for J-PARC RCS
- can use for PRISM-cavities

## Hybrid RF system

- Proposed by A. Schnase.
- Combination of MA cavity with a resonant circuit composed by inductor and capacitor.
- Developed for J-PARC RCS cavities.

$$
\begin{aligned}
& \mathrm{f}=1 / 2 \pi \sqrt{\mathrm{LC}} \\
& 1 / \mathrm{L}=1 / \mathrm{Lcore}+1 / \text { Lind } \\
& \mathrm{Q}=\mathrm{Rp} / \omega \mathrm{L} \\
& \quad \mathrm{Rp}: \text { shunt }
\end{aligned}
$$

$J$-PARC: add C and L to control Q and f PRISM : add L to control f

## Hybrid RF system

3 Gap Cavity impedance, 6 RCS tanks

Parallel inductor for J-PARC

Inside of PRISM AMP

## This will be tested in this year.

## 6-cell PRISM-FFAG

## Demo. of Phase Rotation with $\alpha$-particles

- FFAG-ring
- PRISM-FFAG Magnet x 6, RF x 1
- Beam : $\alpha$-particles from radioactive isotopes
- ${ }^{241} \mathrm{Am} 5.48 \mathrm{MeV}(200 \mathrm{MeV} / \mathrm{c}) \rightarrow$ degrade to $100 \mathrm{MeV} / \mathrm{c}$
- small emittance by collimators
- pulsing by electrostatic kickers
- Detector : Solid state detector
- energy
- timing

## Apparatus for the test of phase rotation

## Comparison b/w data and simulation

## Preliminary agenda.

## Location

Day 1: Room 539 Blackett Laboratory
Day 2: Ron

## Wednesday $1^{\text {st }}$ Juiy $\mathbf{2 0 0} \mathbf{9}$

Registration: 10.00 to $10: 30$, (Coffee at $10: 20$ )

## Session 1: 10.30 am

Welcome and Introduction to Muon-to-Electron Conversion and Session Chair: Y. Uchida

## PRISM-FFAG Task Force

- The 1st new PRISM-FFAG workshop was held at Imperial College London, UK, 1st- 2nd July, 2009
- organized by J.Pasternak
- http://www.hep.ph.ic.ac.uk/muec/meetings/20090701/agenda.html
- The workshop aims to cover the technological challenges in realizing an FFAG based muon-toelectron conversion experiment which has a sensitivity of $<10^{-18}$
- Physics of Muon-to-Electron Conversion.
- Status of PRISM-FFAG.
- Beam dynamics, design and simulation studies for PRISM.
- Hardware developments for FFAG accelerators.
- Challenges of beam injection and extraction.
- Recent developments in FFAG accelerators.
- The Collaboration and PRISM Task Force are proposed in the workshop, and being organized and created. You are welcomed to join.
- injection/extraction, kicker design
- re-optimization of the PRISM-FFAG design
- possibility of new lattice

Muon cooling in the PRISM-FFAG

- the first attempt to study a racetrack FFAG ring cooler

## Motivation of This Study

- The 6D-emittance reduction of a muon beam is essential for future neutrino factories and a muon collider. No realistic design for the muon cooling section, however, have been designed yet.
- A cooling section using a ring (ring cooler) would be more cost effective than that of with a straight channel, science a number of RF and absorbers would be reduced.
- Some designs for the ring cooler have been proposed. These designs have some issues must be solved:
- injection/extraction and its kicker system,
- window of absorbers and RFs.
- This study is the first attempt to design a realistic ring cooler using the following ideas.
- racetrack FFAG
- FFAG has a large transverse acc. and dispersion in horizontal.
- superfluid helium wedge absorbers

## Ionization Cooling in FFAGs

- There are few simulation studies for the ionization cooling in FFAG rings. Needs more studies.
- in a nufact-j FFAG ring
- (superconducting FFAG for 0.3-1.0GeV/c muon acceleration)
- H Schonauer, J. Phys. G: Nucl. Part. Phys. 29 (2003) 1739
- H. Schonauer, NIM A503 (2003) 318-321
- Thin absorbers in the symmetry plane of all RF cavity gaps were inserted to the ring.

- in the PRISM-FFAG ring by H.Kirk ???

## New Ideas for Scaling-FFAG

- Recently, some new ideas for the scaling FFAG have been proposed by Y.Mori and S.Machida et. al.
- Insertion of straight section into the FFAG ring
- Dispersion suppress in a FFAG ring/channel.

by Y.Mori, NuFact09
- These ideas would be useful for inj/ext of the FFAG ring cooler.

## New Ideas for Scaling-FFAG (cntd.)

## APPLICATION: PRISM

## Racetrack FFAG for Muon Cooling

Just an illustration for a conceptual design
matching section
straight section

## Racetrack FFAG for Muon Cooling

Just an illustration for a conceptual design

## PRISM-FFAG Based Ring Cooler

- This presentation shows a result of a ring cooler based on PRISM-FFAG lattice as the first trial of my study. This is a simulation study for the cooling section of the racetrack FFAG cooler.

| Circumstance (m) | 38 |
| :--- | :---: |
| Number of cells | 10 |
| Field index k | 4.6 |
| F/D ratio | 6.0 |
| Maximum field (T) | 1.6 |
| Central momentum (MeV/c) | 308 |
| Magnet type | DFD triplet |
| Magnet aperture | $\mathrm{H}: 100 \mathrm{~cm} \times \mathrm{V}: 30 \mathrm{~cm}$ |
| Horizontal tune | 2.73 |
| Vertical tune | 1.58 |

The magnetic field of the original PRISM-FFAG is multiplied by 4.0.

## Param of PRISM-FFAG Based Ring Cooler

| Circumstance (m) | 38 |
| :--- | :---: |
| Total number of cells | 10 |
| Cell with RF cavities and absorbers | 8 |
| Central momentum Po (MeV/c) | 308 |
| Number of wedge absorbers per cell | 4 |
| Wedge thickness on ro for Po(cm) | 8.672 |
| Wedge opening angle (degree) | 3.86 |
| Absorber material | LH 2 |
| Number of cavities per cell | 4 |
| Cavity length (cm) | 28.75 |
| RF gradient (MV/m) | 8.709 |

## Beta Functions and Dispersion

## Cooling Simulation

- Tracking code: g4beamline-1.16 on Mac OS X
- with stochastic processes
- without decay
- physics model: QGSP_BIC
- RF cavities were simulated as electrostatic parallel plates.
- $5 \times 10^{4} \mu^{+}$have been tracked.

## Initial Beam Condition

Events for $10 \mu^{+}$tracked up to 15 turns

## Result

Initial

after 4 turns
after 8 turns
after 12 turns

No cooling effect is observed with PRISM-FFAG based ring. Since, probably, $\beta$ function is too large, angler acceptance is not enough. Need new lattice design.

## Performance of the Orig. PRISM-FFAG

Horizontal Acceptance
$40000 \pi \mathrm{~mm}$ mrad

Vertical Acceptance
$6500 \pi \mathrm{~mm}$ mrad

## MUSIC project

Muon beam is coming to the RCNP, Osaka-Univ.

## MUSIC (=MUon Science Innovative Commission)

## muon yield estimation

0.4 kW (400MeV, $1 \mu \mathrm{~A}$ protons) $10^{9}$ muons/sec (for MUSIC)

We are also considering to finalize the 10 -cell PRISM-FFAG R\&D using the muon beams in the MUSIC project.

## Pion Capture System

- Inject proton beam from the gap of coils into solenoid magnet
- Capture backward-emitted pions in 3.5T solenoid field

## Summary

- PRISM provides a solution to improve the $\mu$-e conv. sensitivity less than $10^{-17}$ adopting a muon storage ring, which make mono-energetic and pure muon beam. A staging scenario of mu-e conversion experiment (COMET - PRISM) was proposed in Japan.
- We had R\&D program on the muon storage ring from 2003 to 2009. Many successful outcomes were achieved.
- large aperture FFAG,
- high field gardened RF system
- 6-cell FFAG and phase rotation test.
- Hybrid RF to realize the 4 MHz sawtooth (this year)
- Prospects
- The collaboration and task force for the PRISM-FFAG were created. We will continue to study the PRISM-FFAG to realize the ultimate $\mu$-e conv. experiment.
- PRISM-FFAG based ring cooler have been studied. New lattice design is necessary to realize a racetrack FFAG ring cooler.
- A new muon beamlin (MUSIC) is now under construction at RCNP, Osaka Univ., and PRISM-FFAG study can be continue with the muon beam.
