

Welcome and Chair Transitions

Elizabeth Sexton-Kennedy

Goals of this Meeting

- See if we agree about some of the recent policy developments within the Consortium
 - The OSG Consortium is a consortium of scientific collaborations, scientific computing centers, and existing and new grid research and deployment projects, involving both computational and application scientists, working together to provide and support the set of facilities, services, and infrastructure needed to provide a persistent national grid infrastructure for large-scale US science.
 - “Consortium membership occurs through completed registration of a resource, VO, or other organization with the Consortium through an operations registration process.”
 - Frank says if you are in the Topology (on the map) then you are part of OSG Consortium
 - I would claim that we should update the bylaws to recognize the international aspect of US science.

Goal of the Meeting 2

- We'll hear status reports from Frank about the new software and services projects that make up the Consortium
 - Pelican
 - PaTH
 - IRIS-HEP
- We'll have a discussion about developments with partners.

Chair Transitions

	<i>Meeting in March Official start of the new model</i>				
<i>(s)election</i>		<i>election</i>		<i>election</i>	
↓	↓	↓		↓	
2019	2020	2021	2022	2023	2024
