Semi-leptonic B decays at LHCb

Thursday, 3 August 2017 11:03 (18 minutes)

With large branching fractions and controllable theoretical uncertainties, semileptonic B decays are excellent tools for measuring B hadron properties such as lifetimes, as well as the determination of the CKM matrix elements, $|V_{xb}|$ and studying non-perturbative QCD. This talk will review the latest measurements with semileptonic B decays at the LHCb experiment.
