Type: **Presentation**

Hadronic decays of D(s) at BESIII

Tuesday, 1 August 2017 14:06 (18 minutes)

With 2.93/fb and 3.19/fb e^+e^- annihilation samples taken at $E_{cm} = 3.773$ and 4.178 GeV, respectively, we perform amplitude analyses of $D^0 \rightarrow 4$ -body.

We also measure the CP asymmetries of $D^+ \rightarrow K_{(S/L)}^+ K^0$ and γ_{CP} based on $D^0 \rightarrow K_{(S/L)}^0 \pi^0$. Additionally, we report measurements of branching fractions for $D(s)^{0+} \rightarrow hh^{(+)}$, h^0h^0 , and final states that contain two K_S .
