

Introduction for protoDUNE SP measurement group meeting

10/05/2016

WG meeting at CERN 28-30 June

Two main goals of the workshop

The workshop will be a good opportunity to involve new people in the effort of the measurement group: transfers from 35-ton, synergies with the DP, external contributors

The goal for the outcome of the workshop is:

To provide well-defined parameters of the beam (particle types, rates, momentum resolution, PID) to execute a successful measurement programme.

Discussion points for the Coll. meeting

An initial list of discussion points

- List of measurements with priority to be investigated during the June workshop
- Discussion about any changes in the design that can affect the measurement programme
- Status of the MC and RECO for protoDUNE
