

# CMS and LHC Update

---

Aron Soha (FNAL)

For the CMS Collaboration

August 1, 2016

All Experimenters' Meeting

# Reminder and Outline

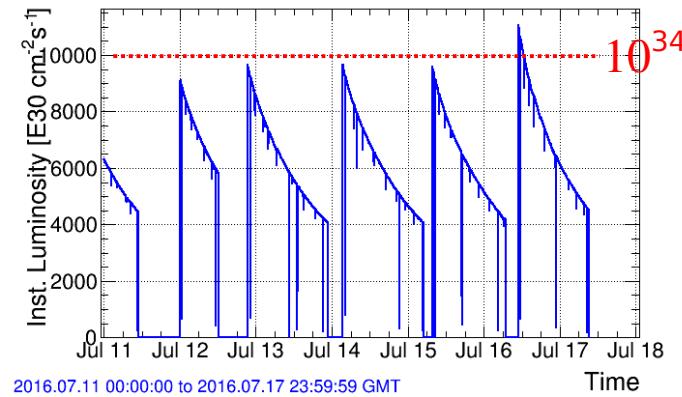

- Last report by Caterina Vernieri on July 11, 2016 (just 3 weeks ago)
  - LHC design luminosity of  $10^{34} \text{ cm}^{-2}\text{s}^{-1}$  had been achieved
  - LHC had delivered  $11.5 \text{ fb}^{-1}$  and CMS had recorded  $10.5 \text{ fb}^{-1}$  (as of July 7)
- Today
  - LHC performance and developments
  - CMS data collection and data quality
  - CMS activities
  - Schedule

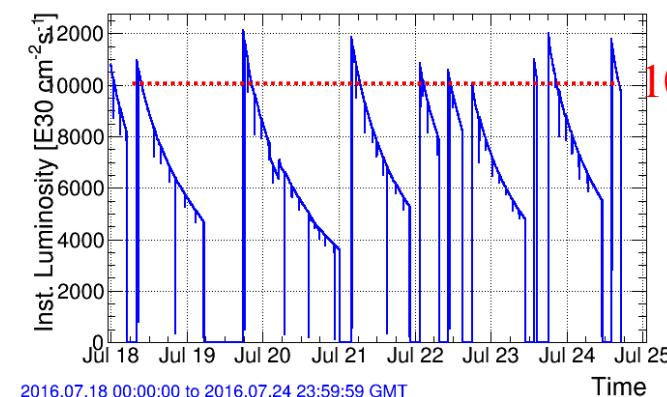

# LHC: Inst. & Peak Lumi

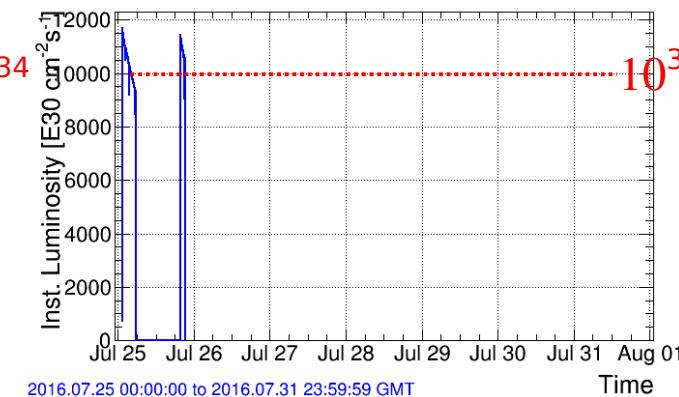

Week28: CMS Instantaneous Luminosity [pp]

Week29: CMS Instantaneous Luminosity [pp]

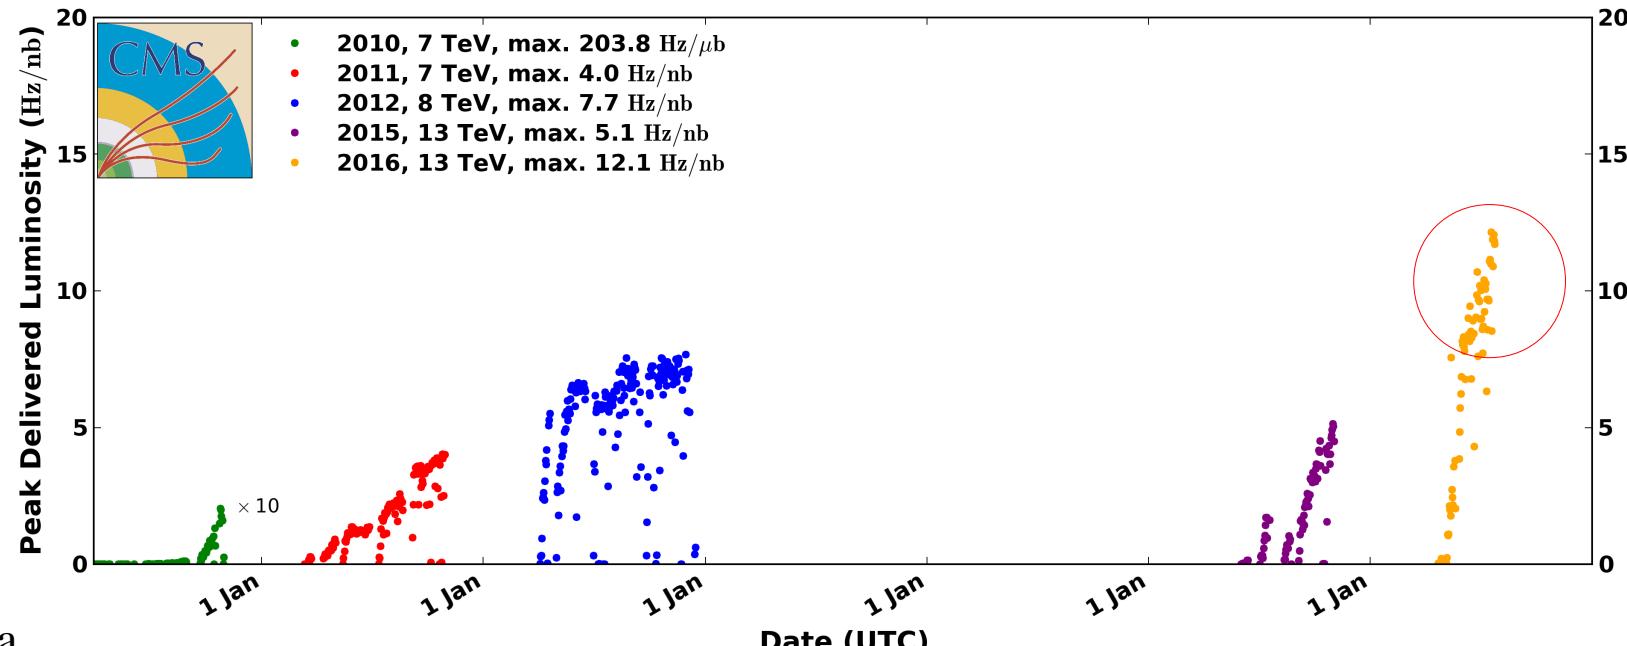

Week30: CMS Instantaneous Luminosity [pp]

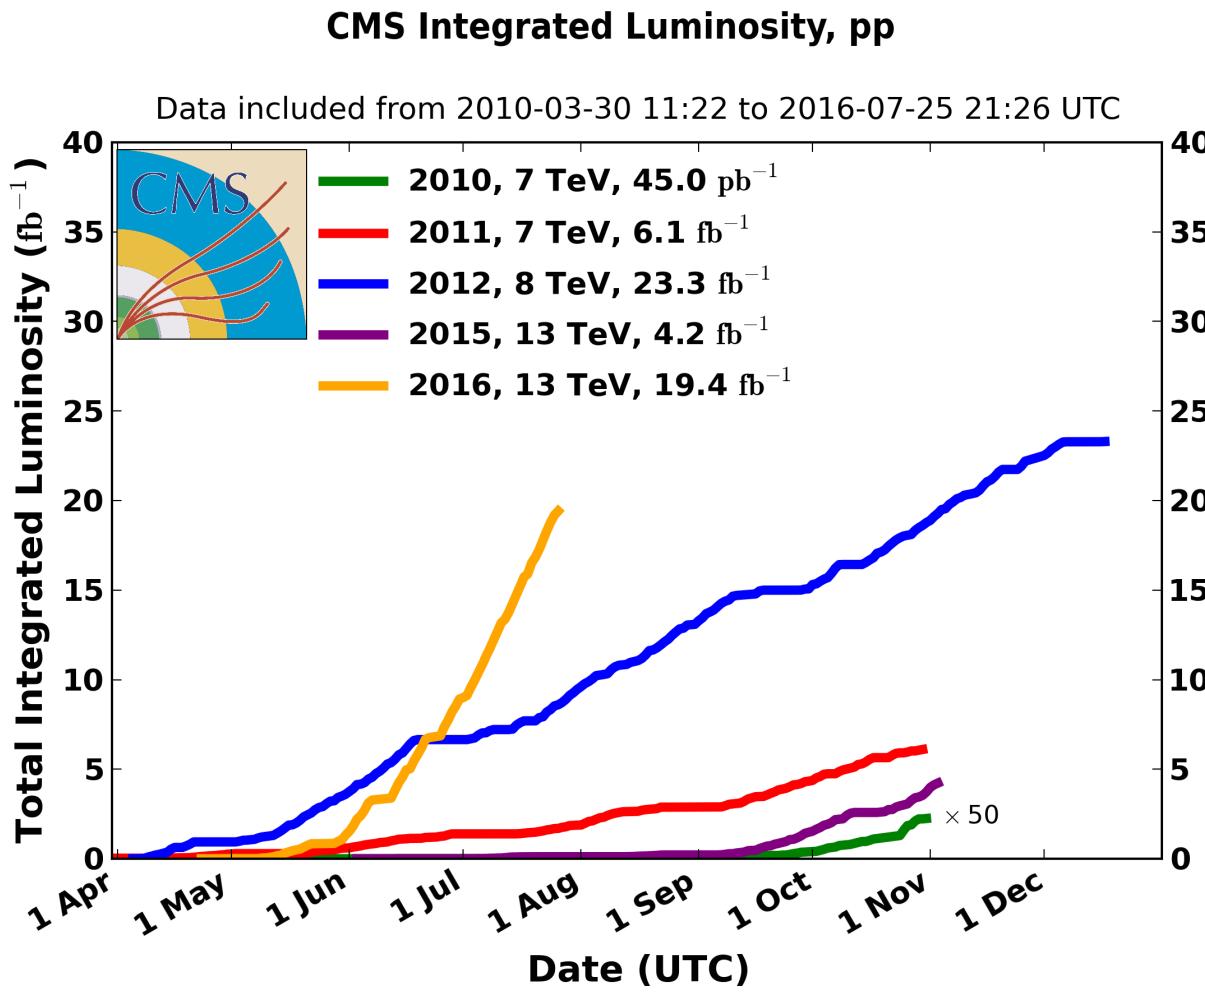

## CMS Peak Luminosity Per Day, pp

Data included from 2010-03-30 11:22 to 2016-07-25 21:26 UTC

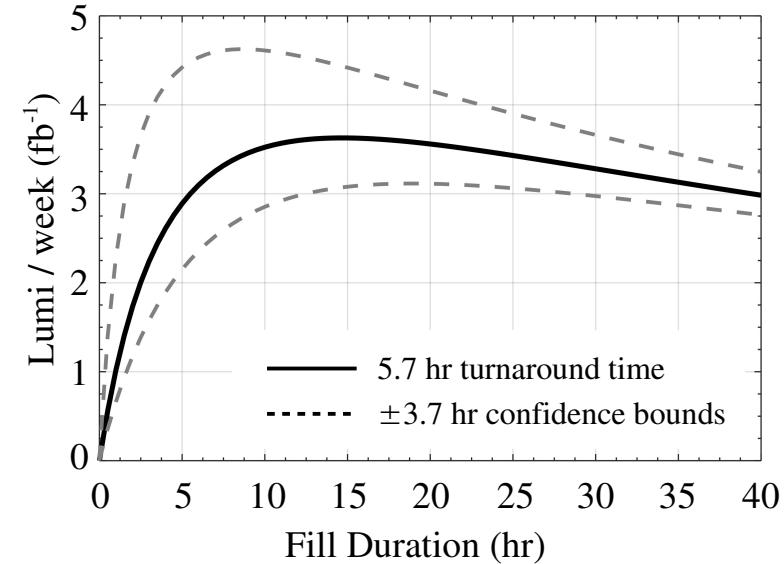

# LHC: Integrated Lumi

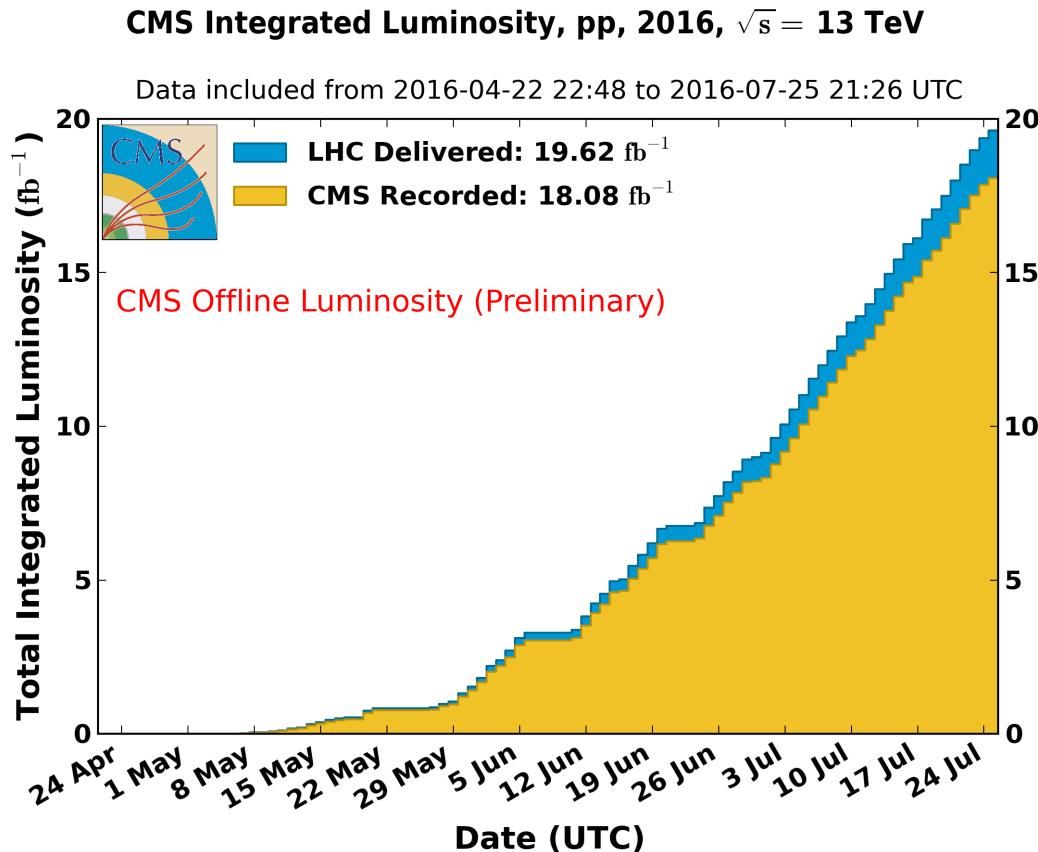

- New phase-space scheme has led to lower emittance, and higher luminosities
- Lumi decay lifetime is shorter, so fill duration re-optimized
  - Puts emphasis on turn-around time

# CMS: Recorded Data

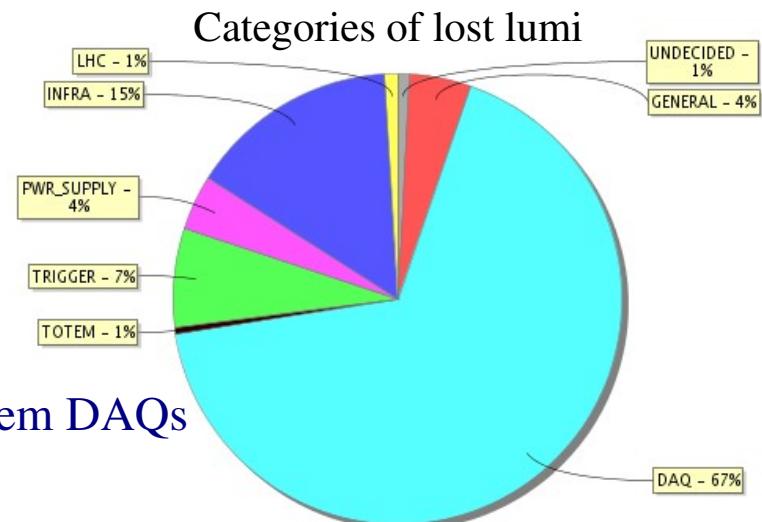

- Lost Lumi due to downtimes
  - DAQ:  $0.70 \text{ fb}^{-1}$  distributed fairly evenly across subsystem DAQs
  - Infrastructure:  $0.16 \text{ fb}^{-1}$  (solenoid, cooling)
  - All others:  $0.19 \text{ fb}^{-1}$

Past three weeks:

- Recorded  $7.5 \text{ fb}^{-1}$
- 93% efficiency for recording data

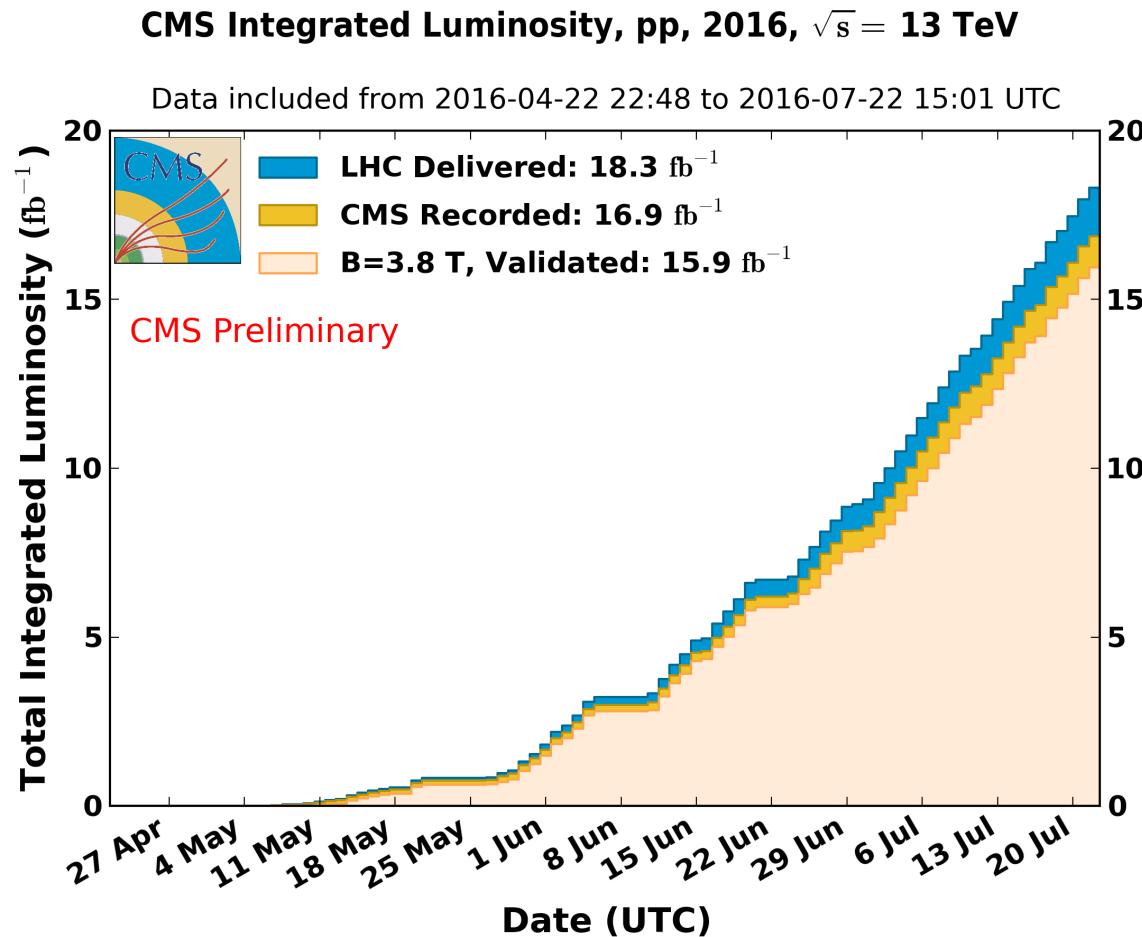

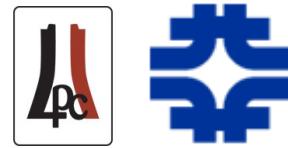

For the year:

- Recorded  $18.1 \text{ fb}^{-1}$
- 92% efficiency for recording data

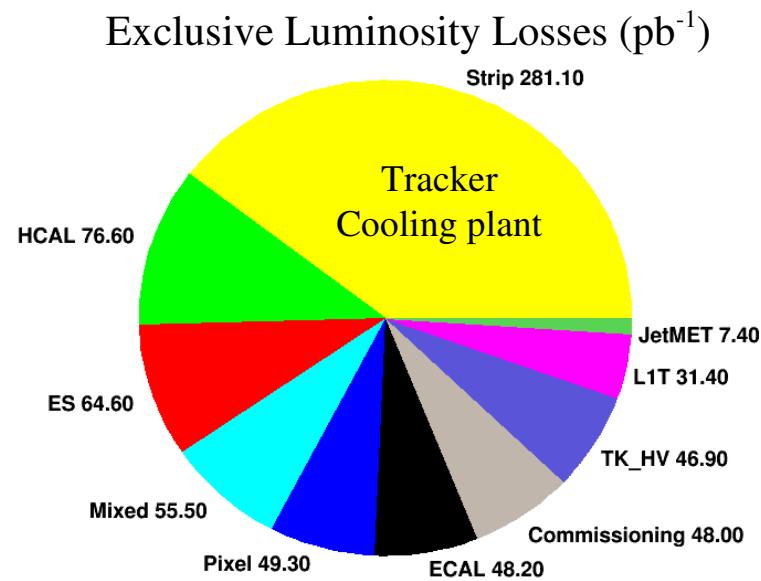

# CMS: Certified Data

- Lost Lumi from certification step:
  - Main lumi lost ( $281.1 \text{ pb}^{-1}$ ) due to tracker cooling plant

For the year: (as of July 22)

- Certified  $15.9 \text{ fb}^{-1}$
- 94% of recorded data is good for all analyses
- $12.9 \text{ fb}^{-1}$  was validated for ICHEP, from sample collected up to July 15

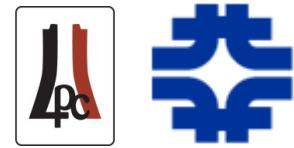

# CMS: Activities/Challenges

- Overall smooth operations, considering high event rate and pileup
- Highly Ionizing Particles in the tracker, saturates strip readout for subsequent bunch crossings → Loss in hit and track efficiency
  - Expected to some degree
  - Strategy: Quantify effects with dedicated runs, include in simulations, mitigate in tracking software, explore hardware mitigation
- Trigger:
  - Efficiency of new version of L1 muon trigger was falling off at high  $p_T$ , firmware bug identified and fixed, being tuned for showering muons
  - High Level Trigger: Working to reduce rate to reduce load on computing
  - Preparing menus for luminosities up to  $1.6 \times 10^{34} \text{ cm}^{-2}\text{s}^{-1}$
- ICHEP preparations:
  - Detector performance studies & physics object efficiencies, scale factors, etc. updated
  - ~50 approvals were scheduled for last week, plus 15 prior to that since mid-June

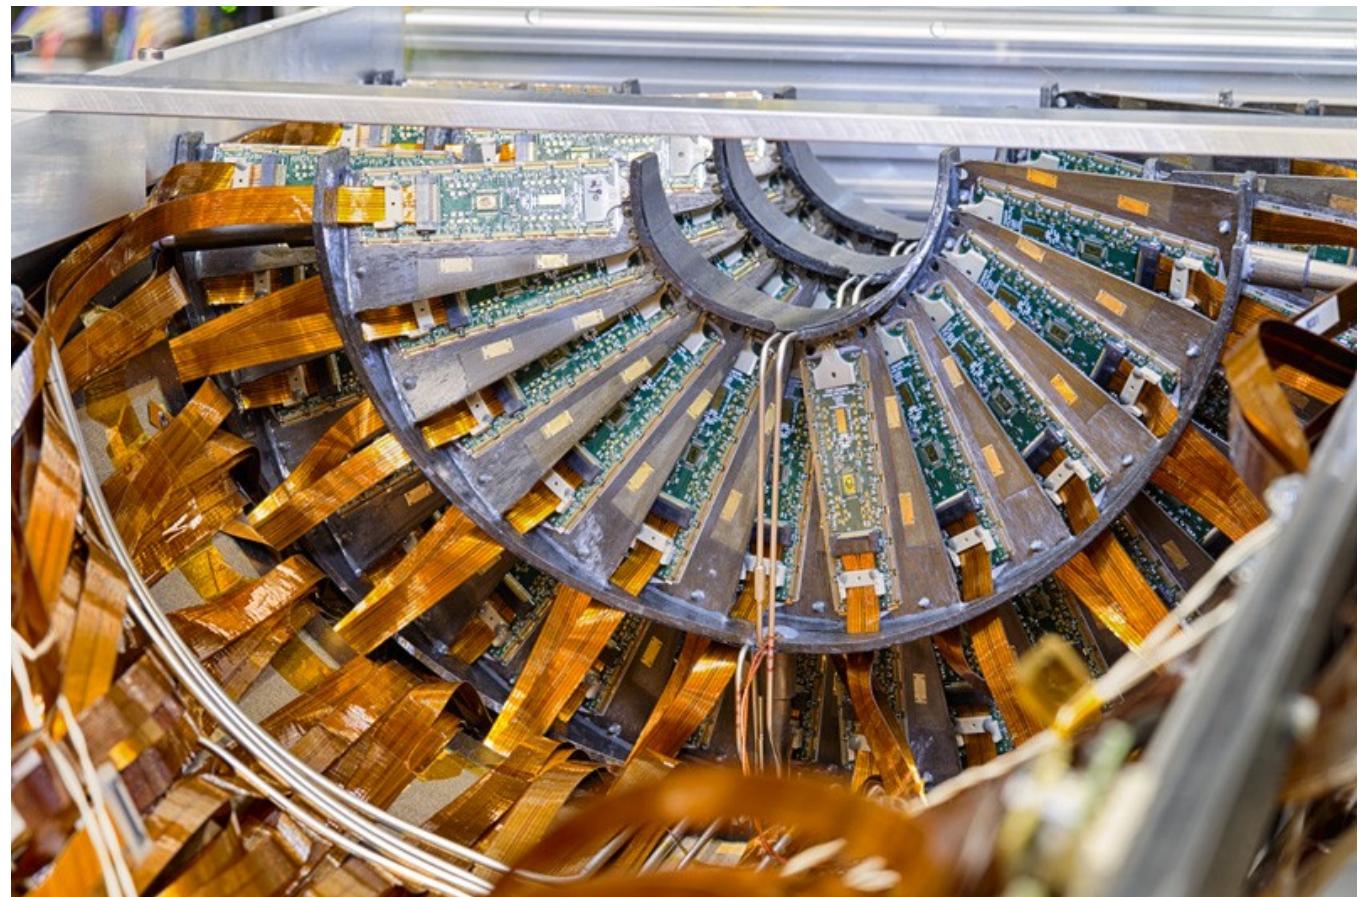

# Phase 1 Upgrade Fwd Pixels

- Assembly at SiDet:

- Two quarter-sections have been fully assembled;  
One under test and soon ships to CERN
- 3<sup>rd</sup> and 4<sup>th</sup> sections will be complete by end of Sept.
- Installation in March 2017

Quarter-section of the CMS Forward Pixel Detector Upgrade (Photographer: Reidar Hahn)

- In the pit at CMS:

- Pilot blade being commissioned with LHC collisions and read out in parallel to CMS DAQ without impacting data taking efficiency

# LHC 2016 Schedule

		July				Aug				Sep					
Wk		27	28	29	30	31	32	33	34	35	36	37	38	39	
Mo		4	11	18	25	31	1	8	15	22	29	5	12	19	26
Tu										MD 2					
We												TS2			
Th					MD 1						Jeune G				
Fr															
Sa											MD 3				
Su					beta* 2.5 km dev.										

Oct Nov Dec																End of run [36:00]
Wk	40	41	42	43	44	45	46	47	48	49	50	51	52			
Mo	3	10	17	24	31	7	14	21	28	5	12	19	26			
Tu	MD 4						Ions setup				Extended year end					
We					TS3						technical stop					
Th					MD 5			Ion run (p-Pb)				Lab closed				
Fr																
Sa										Pb MD			Xmas	New Year		
Su																

- proton-proton run (10 more weeks)
- Machine Development
- Technical Stop / recovery
- Ion setup
- Ion run (p-Pb)
