

2017 IOTA/FAST COLLABORATION MEETING

Tuesday 06 June 2017 - Tuesday 06 June 2017

OTE (IARC)

Book of Abstracts

Contents

300MeV experiments: ICS, Xtal radiation, single photon etc. collaboration subjects	1
Board Shuttle to IARC	1
Board Shuttle to Wilson Hall	1
Closeout	1
Coffee break	1
Coherent instabilities in integrable optics	1
Collaboration subjects	1
Director’s Welcome and Group Photo	1
Discussion: Issues and challenges of NL optics experiments in IOTA	2
Discussion: Issues and challenges of experiments in IOTA	2
Discussion: Tentative plan for FAST experiments in 2017	2
Discussion: Tentative plan for FAST experiments in 2017 IOTA/FAST tur and lunch break	2
Group Photo and Board Shuttle to NML	2
IOTA Electron Lens: nonlinear optics, cooling, and space-charge compensation	2
IOTA optics and NL magnet	2
IOTA/FAST tour and lunch break	3
Introduction- IOTA/FAST Facility Plan, Timeline and Meeting Goals	3
Linac commissioning	3
NML Tour	3
Neural network reinforcement learning control studies	3
New RCS design with IO	3
New RCS design with IO	3
No Host Lunch - Following NML tour you are welcome to take a short walk or ride the shuttle to Wilson Hall Cafeteria. The Cafeteria offers a wide variety of menu options.	3

Non-linear optics in UMER: theory, simulations, experiments	4
OSC progress	4
Opening Welcome	4
Results of the CC2 transverse matrix measurements in 2016 and 2017 plans	4
Ring and p+ injector status	4
Simulation of Nonlinear Decoherence with Space	4
Simulation of Nonlinear Integrable Optics in IOTA using IMPACT-Z	4
Synergia simulations on the impact of space charge on nonlinear decoherence in the IOTA ring	5
Synergia simulations on the impact of space charge on nonlinear decoherence in the IOTA ring	5
TOUR IOTA FAST Facility	5
Talk by Lisa Lopez	5
The neural network reinforcement learning control studies at FAST	5
Wakefield study for superconducting accelerator cavities at FAST Facility	5
Wakefield study for superconducting accelerator cavities at FAST Facility	6

27

300MeV experiments: ICS, Xtal radiation, single photon etc. collaboration subjects

46

Board Shuttle to IARC

48

Board Shuttle to Wilson Hall

41

Closeout

36

Coffee break

39

Coherent instabilities in integrable optics

28

Collaboration subjects

9

Director's Welcome and Group Photo

35

Discussion: Issues and challenges of NL optics experiments in IOTA

40

Discussion: Issues and challenges of experiments in IOTA

42

Discussion: Tentative plan for FAST experiments in 2017

29

Discussion: Tentative plan for FAST experiments in 2017 IOTA/FAST tur and lunch break

47

Group Photo and Board Shuttle to NML

37

IOTA Electron Lens: nonlinear optics, cooling, and space-charge compensation

54

IOTA optics and NL magnet

43

IOTA/FAST tour and lunch break

10

Introduction- IOTA/FAST Facility Plan, Timeline and Meeting Goals

Vladimir will give a brief Introduction of the IOTA/FAST Facility Plan and Review the Timeline and Goals of the meeting.

52

Linac commissioning

44

NML Tour

21

Neural network reinforcement learning control studies

32

New RCS design with IO

33

New RCS design with IO

45

No Host Lunch - Following NML tour you are welcome to take a short walk or ride the shuttle to Wilson Hall Cafeteria. The Cafeteria offers a wide variety of menu options.

34

Non-linear optics in UMER: theory, simulations, experiments

38

OSC progress

55

Opening Welcome

50

Results of the CC2 transverse matrix measurements in 2016 and 2017 plans

53

Ring and p+ injector status

23

Simulation of Nonlinear Decoherence with Space

26

Simulation of Nonlinear Integrable Optics in IOTA using IMPACT-Z

30

Synergia simulations on the impact of space charge on nonlinear decoherence in the IOTA ring

31

Synergia simulations on the impact of space charge on nonlinear decoherence in the IOTA ring

4

TOUR IOTA FAST Facility

Shuttle to New Muon Lab (NML)

25

Talk by Lisa Lopez

49

The neural network reinforcement learning control studies at FAST

51

Wakefield study for superconducting accelerator cavities at FAST Facility

22

Wakefield study for superconducting accelerator cavities at FAST Facility
