

NOvA experiment report

An update of NOvA operations week of 02/27

GAVIN S. DAVIES

INDIANA UNIVERSITY

03/06/2016

Operations: Last week

March 1st/2nd 2-day beam downtime + Power outage

- Opportunity for some Far Detector maintenance
 - 21 FEB
 - 1 APD
 - 1 TECC

- Successful DAQ and DDT tests
 - Stability tests of supernova self-triggering system
 - Self-shutdown temperature monitoring utility

DAQ Status and Uptime

- Excellent uptime for both detectors
- **99.2%** POT-weighted uptime for last 4 weeks (FarDet)

- **99.1%** POT-weighted uptime for last 4 weeks (NearDet)

Computing: Last Week

NOVA Computing Summary

Average Jobs Running Concurrently [↗](#)

2990

Total Jobs Run [↗](#)

131093

Average Time Spent Waiting in Queue (Production) [↗](#)

3.485 hour

Running Batch Jobs

Total Time Wasted by Running Jobs

New Data Cataloged [↗](#)

19.3 TB

Total Data Cataloged [↗](#)

9.0 PB

Production operations have begun, starting with ND data.

- Moved pretty quickly due to large OSG usage (3-4k slots).
- Production jobs didn't run over the weekend due to typos in some configurations.
- As of now we have 2k+ jobs running again.

Hoping to begin MC generation as soon as tomorrow.
