(on behalf of the SeaQuest E906
collaboration)

Beam

Computing Summary

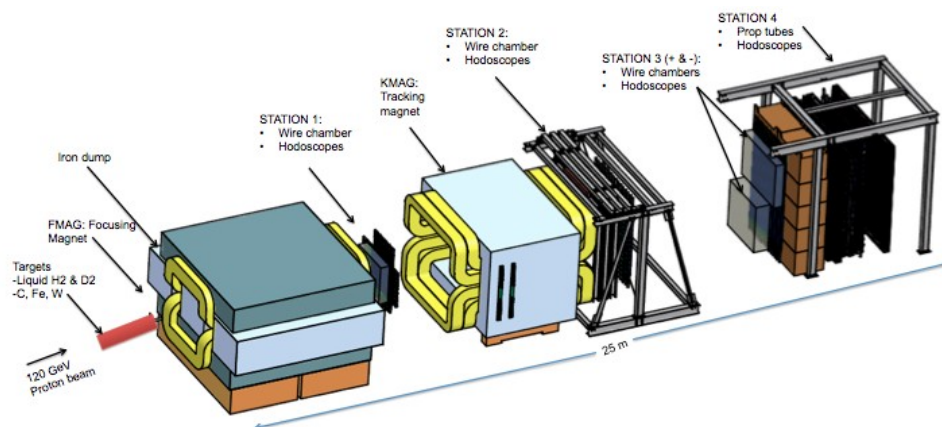

General Status

Target

- Taking good data with liquid targets

DAQ

- MainDAQ – occasional minor VME ROC problem
- ScalarDAQ – working
- BeamDAQ – working

Spectrometer

- Beam vacuum pipe, cherenkov counter, hodoscopes, online monitoring, prop tubes – **all stable**
- Station 1 drift chamber broke a wire which has now been repaired.
- Finished purging with inert gas and now we are flowing operating gas
- Expected to be up to reasonable efficiency by Thursday
