

Summary of MicroBooNE Operation for AEM

Libo Jiang

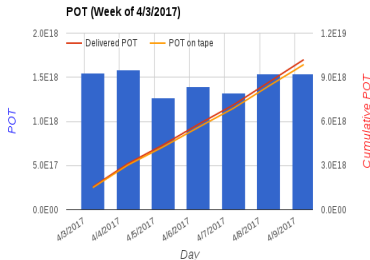

University of Pittsburgh

April 10, 2017

Beam Statistics

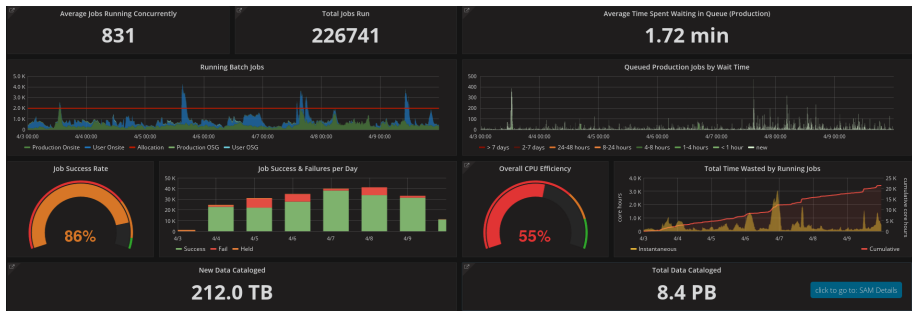

DAQ UpTime (Daily, Past Week)

- Cumulative POT: 9.9e18 On Tape; 1.0e19 Delivered (98%)
- DAQ uptime fraction in the week(April3):96.7%

Computing Summary

- We have a few problematic users with low efficiencies
- The overall efficiencies for CMS Tier-1 and GPGrid has been dropping lower in the last 48 hours

Summary

- Good week for MicroBooNE. Running stable at drift HV 70 kV.
- HVAC duct installation finalized!
- CRT Top panel: Minor issues with a couple of FEBs. Access to the panels was done using the basket and the help of a trained technician operating the crane.
