

Status of E906/SeaQuest (May 15, 2017)

Takahiro Sawada,
Univ. of Michigan

on behalf of the SeaQuest Collaboration

Accumulated protons for past week

Status of the experiment

- **Drift Chamber**

DC1 was tripped on last Saturday night. We are investigating the cause.

- **Other chambers / Prop. tubes / Hodoscopes** are fine.

- **Target**

We lost the LH2 because of power outage (scheduled)
(We could keep LD2 by a generator)
→ We will refill LH2 target tomorrow

- **DAQ** is fine.

- **Production R007** (on the RUN 4 data, taken before summer of 2016): decoding was finished.
