All Experimenters' Meeting

## CMS and LHC report

Nadja Strobbe (Fermilab) June 5, 2017

### LHC schedule

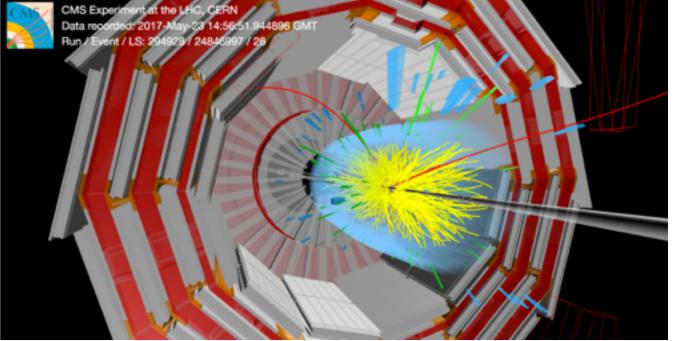

- LHC recommissioning moving faster than original plan
- First stable beams declared already on May 23
- Scrubbing run starting tomorrow
- Getting ready for fast luminosity ramp up!

# LHC commissioning

- First collisions on May 11th (not in stable beams)
- First stable beams on May 23rd: Start of the 2017 Run!
- Interleaved running in stable beams and more commissioning (already 70h of stable beams)

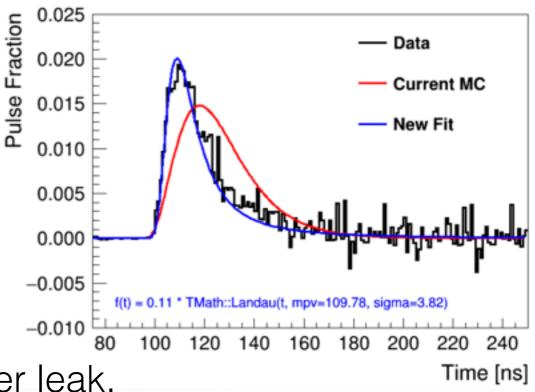

- Fast ramp-up from 3 colliding bunches to 600 now
- Mini van der Meer scan performed for luminosity calibration

### CMS status

- Commissioning program completed using cosmics, beam splashes, and test collisions
- Already taking data during stable beams
  - New pixel detector running smoothly, alignment and timing being finalized
  - Hadron calorimeter operating well. Phase settings for timing being finalized, SiPM pulse shape measured in-situ.
  - Muon detectors running smoothly
    <sup>-0.010</sup>
    <sup>-0.</sup>

#### Getting ready to take physics data

• Finalizing trigger menu to use during luminosity ramp-up

### Other news

- LHC tunnel is undergoing hydrostatic lift wrt CMS cavern
  - Beam will be shifted down magnetically by 1.5 mm to ensure symmetric illumination of the CMS detector
  - Optics have been designed to handle this without aperture limitations
- Preparing large scale MC campaign for use with 2017 data, and dedicated high-pileup MC for Phase 2 upgrade studies
- Conferences:
  - Strong showing at LHCP conference
  - Preparing for EPS (71 CMS talks and 32 posters)
