

Light calibration system update

Enrique Calvo, Clara Cuesta, Ana Gallego,
Inés Gil-Botella, Sergio Jimenez. Roberto Santorelli

CIEMAT

May 29th 2017

Design

- 6 Bundles 1-to-7 from Thorlabs
 - SMA connectors at both ends
 - 200UEA fiber
 - 20 m together and 4 m separated,
 - FT05SS at common end, FT030 at split
- Flange from Allectra:
 - 2 x 40CF with 3 feedthroughs each (female if ok for vacuum)

Results - x7 bundle

- LED + PM: $46.3 \mu\text{W}$
- LED + x7 bundle + PM: (av.) $6.46 \pm 0.56 \text{ nW}$
(stev) 9%
(Att.) 10^{-4}

| | |
|---|---------|
| 1 | 6,17 nW |
| 2 | 6,24 nW |
| 3 | 6,04 nW |
| 4 | 6,15 nW |
| 5 | 7,54 nW |
| 6 | 6,15 nW |
| 7 | 6,92 nW |

→ Central fiber

→ LED anisotropy?
to be checked

Excellent Light
uniformity

Results - x20 bundle

- LED + PM: $48.0 \mu\text{W}$
- LED + x20 bundle + PM: (av.) $0.477 \pm 0.134 \text{ nW}$
(stev) 28%
(Att.) 10^{-5}

| | |
|----|---------|
| 1 | 0,29 nW |
| 2 | 0,74 nW |
| 3 | 0,55 nW |
| 4 | 0,5 nW |
| 5 | 0,4 nW |
| 6 | 0,35 nW |
| 7 | 0,61 nW |
| 8 | 0,19 nW |
| 9 | 0,49 nW |
| 10 | 0,39 nW |
| 11 | 0,59 nW |
| 12 | 0,45 nW |
| 13 | 0,63 nW |
| 14 | 0,5 nW |
| 15 | 0,64 nW |
| 16 | 0,51 nW |
| 17 | 0,4 nW |
| 18 | 0,34 nW |
| 19 | 0,41 nW |
| 20 | 0,56 nW |

Worse light
uniformity

Results - x7 bundle (laser)

- Laser + PM: 22.77 mW
- Laser + x7 bundle + PM:

| | |
|---|-------------|
| 1 | 4.49 mW |
| 2 | 4.95 mW |
| 3 | 40 μ W |
| 4 | 282 μ W |
| 5 | 907 μ W |
| 6 | 568 μ W |
| 7 | 867 μ W |

→ Central fiber

Laser does not
provide uniform
Light

Also observed with x20 bundle

Results - 200 μW fiber + x7 bundle

- LED + fiber + PM: 1.56 nW
- LED + fiber + x7 bundle + PM:

| | |
|---|----------|
| 1 | 1.29 nW |
| 2 | 0.062 nW |
| 3 | 0.064 nW |
| 4 | 0.060 nW |
| 5 | 0.062 nW |
| 6 | 0.062 nW |
| 7 | 0.066 nW |

→ Central fiber

A 200- μW fibers
does not provide
uniform light

Next measurements

- x7 bundle @ Cryo T
- LED + 600 μm /800 μm fibers + x7 bundle + PM
- LED + Fiber + PMT → Different fiber positions,
studying SPE shape

Report

Light calibration system testing @ CIEMAT

Version: 15th April 2017

| | |
|---|----|
| 1 Purpose of this document and description of the system | 1 |
| 2 Connectors | 1 |
| 2.1 SMA to SMA Mating Sleeve connectors | 3 |
| 2.2 FC/PC to FC/PC Mating Sleeve connectors | 5 |
| 2.3 FC/PC to SMA Mating Sleeve connectors | 7 |
| 2.4 Conclusions about the connectors testing | 7 |
| 2.5 To-Do list (connectors) | 7 |
| 3 Fibers | 8 |
| 3.1 Attenuation due to the fibers | 8 |
| 3.2 Positioning of the fibers and mechanical stress tests | 8 |
| 3.3 Conclusions about the fibers testing | 8 |
| 3.4 To-Do list (fibers) | 9 |
| 4 Bundle | 9 |
| 4.1 Conclusions about the bundle testing | 10 |
| 4.2 To-Do list (bundle) | 10 |
| 5 Possible configurations for the LCS at the detector | 10 |
| 6 Purchases for future testing | 11 |

Conclusions

- Design: 6x 1-to-7 bundles
2x CF40 with 3 feedthroughs each
- Testing results: 1-to-7 bundle provides homogeneous light with hom. Light input
- Next: tests at CT, with PMT and 600/800- μ m fibers
