Electronics status (Cayetano Santos – APC)

- Finalizing the mezzanine routing during this week
  + detected issues with front-end Samtec connector
  + discussion with IPNL about global triggering strategy
  + replaced one spare input (2 remaining) by a new output to provide trigger out
  + local trigger to each board to be combined using one spare input
  + minor bug fixes (reference voltage levels, etc.)

- Board production
  + unless any more unexpected issue after last review, planned for the end of this week

- Delivering of components
  + 20-wire Samtec connectors with male SMA, OK
  + all parts delivered: ready for production, OK

- Do the shopping ...
  + Ordered third Bittware S4AM mother board
  + Ordered a new uTCA crate to comply with charge readout electronics
  + Ordered white rabbit SPEC and DIO boards to inject trigger into global system
