

Microstructural Characterization of Proton-Irradiated Ti-15V-3Cr-3Sn-3Al and SiC-Coated Graphite

Tuesday, 5 June 2018 17:30 (10 minutes)

The presentation will address post-irradiation microstructural characterization of a Ti-15V-3Cr-3Sn-3Al OTR foil irradiated by 30 GeV protons at the J-PARC neutrino beamline to 0.4 dpa, and SiC-coated graphite samples irradiated by 180 MeV protons at the BLIP facility to 0.05 dpa.

Primary author: Dr SENOR, David (Pacific Northwest National Laboratory)

Co-authors: Mr SCHEMER-KOHRN, Alan (Pacific Northwest National Laboratory); Dr CASELLA, Andrew (PNNL); Dr EDWARDS, Dan (Pacific Northwest National Laboratory); Dr SCHREIBER, Dan (Pacific Northwest National Laboratory); Dr WAKAI, Eiichi (JAEA); Dr KRUSKA, Karen (Pacific Northwest National Laboratory); Mr PRABHAKARAN, Ramprashad (Pacific Northwest National Laboratory); MAKIMURA, Shunsuke (J-PARC/KEK); Dr ISHIDA, Taku (J-PARC/KEK)

Presenter: Dr SENOR, David (Pacific Northwest National Laboratory)

Session Classification: Poster Session and Reception
