Workstation Backup – Atempo LiveBackup with Nexsan ATABeast

Monday, 12 May 2008 15:30 (40 minutes)

NREL's backup solution for workstation PC's using Atempo Livebackup and Nexsan ATABeast. Backups are automated, continual and cone over the network for any workstation PC's. Primary computers being backed up have critical data or applications and computers with complex configurations. Backup configuration allows for grouped or individual settings for the type of data being backed up and exempted data. Hardware being used includes a standard Windows server and disk arrays for actual data storage. Clients can restore folders, subfolders or files with various criteria including location, when the file was last saved and type of file or a total system restoration can be done.
