SW Licensing Strategies & Insuring Compliancy

Tuesday, 13 May 2008 16:15 (40 minutes)

Abstract: Site licensing? Secondary Use Rights? Leasing?

While the software licensing options available in today's marketplace have become increasingly complex, ensuring license compliancy remains critical.

In previous years, we have had regular "impromptu" meetings regarding these subjects. This year, Government and Military attendees are invited to participate in this interactive "Birds of a Feather". The focus of the open discussion will be in three parts: exploring the various purchasing options; license management best practices; and leveraging auditing capabilities to ensure compliancy.

By sharing your institution's strategies in these areas, this venue will provide a unique means for a collaborative "lessons learned" opportunity.
