Sandia Vista Deployment Plans

Monday, 12 May 2008 13:30 (40 minutes)

Over a year after the release of Windows Vista and with the much needed release of Service Pack 1, stability has greatly been improved over the original release. In addition, Microsoft has updated and improved their deployment tools, such as the WAIK and the Microsoft Deployment toolkit, so that we are able to better prepare and streamline our deployment processes.

In this presentation we'll discuss the tools and deployment methods that Sandia is working on in preparation for the gradual rollout of Vista to our environment that is scheduled to begin the summer of 2008.
