I need Cyber Security Help!

Tuesday, 13 May 2008 15:30 (40 minutes)

Bio: Andy Ambabo (pron. Am-bay-bo) has been involved with information technology at Sandia National Laboratories for 16 years. Andy is currently a Project Manager for the Computer Support Operations organization at Sandia.

Abstract: Many organizations are caught between the threat of cyber security vulnerabilities and the lack of resources needed to manage the risk. At Sandia, every line organization is required to have a “cyber security representative” (CSR) who understands the organization’s business and knows how to apply cyber security policies. As in many companies, the role of cyber security representative at Sandia has evolved from administrative to very technical. Sandia’s desktop technicians in the Computer Support Units are well positioned to extend their skills to the cyber security arena. Sandia’s CSU/CSR program provides lab organizations a pool of well qualified cyber security reps from the desktop technician ranks. We’ll talk about the how the program works and it’s benefits and some pitfalls.
