## Expressway Red Hat Installation

*Monday, 12 May 2008 11:45 (40 minutes)*

- Institutional install of Red Hat Linux 3,4,5 from one CD
- Static IP or DHCP environment
- Uses syslinux's comboot32 API to gather information from user
- Modifying initial ramdisk (initrd) to change anaconda innards
- %post and %pre in kickstart (LANL's configuration)
- "Set it and forget it" install by 1) creating kickstart 2) editing kickstart 3) editing hardening configuration 4) insert CD and boot 5) enter information about the host 6) installation does the rest... completely updated after install is finished!
