Update on Network Enhancements for DID at ORNL

Monday, 12 May 2008 15:30 (40 minutes)

The Defense in Depth (DID) project has been underway at ORNL for over a year with many changes both technically and procedurally to the IT environment at ORNL. Several of those changes involved the Network infrastructure. This presentation will provide an update to a presentation made at NLIT 2007. It will focus on network level enhancements put in place to meet Network Segregation requirements of the DID project. It will include discussion of technologies used to provide Network Segregation as well as policies processes driving the technology decisions.
