SourceForge BOF

Monday, 12 May 2008 16:15 (40 minutes)

What is SourceForge? How has LANL responded to the need for a better software quality management system? SourceForge provides a variety of integrated resources to facilitate successful development and management cycles. These resources allow 1,200 customers to utilize many of the integrated tools like source code management and role base access controls. This centralized service available in both yellow and red networks offers up a web server with an Oracle backend. We will be discussing in further detail how it is used as a Source Code Management (SCM) repository, and how users use it at LANL.
