

MicroBooNE Status Report

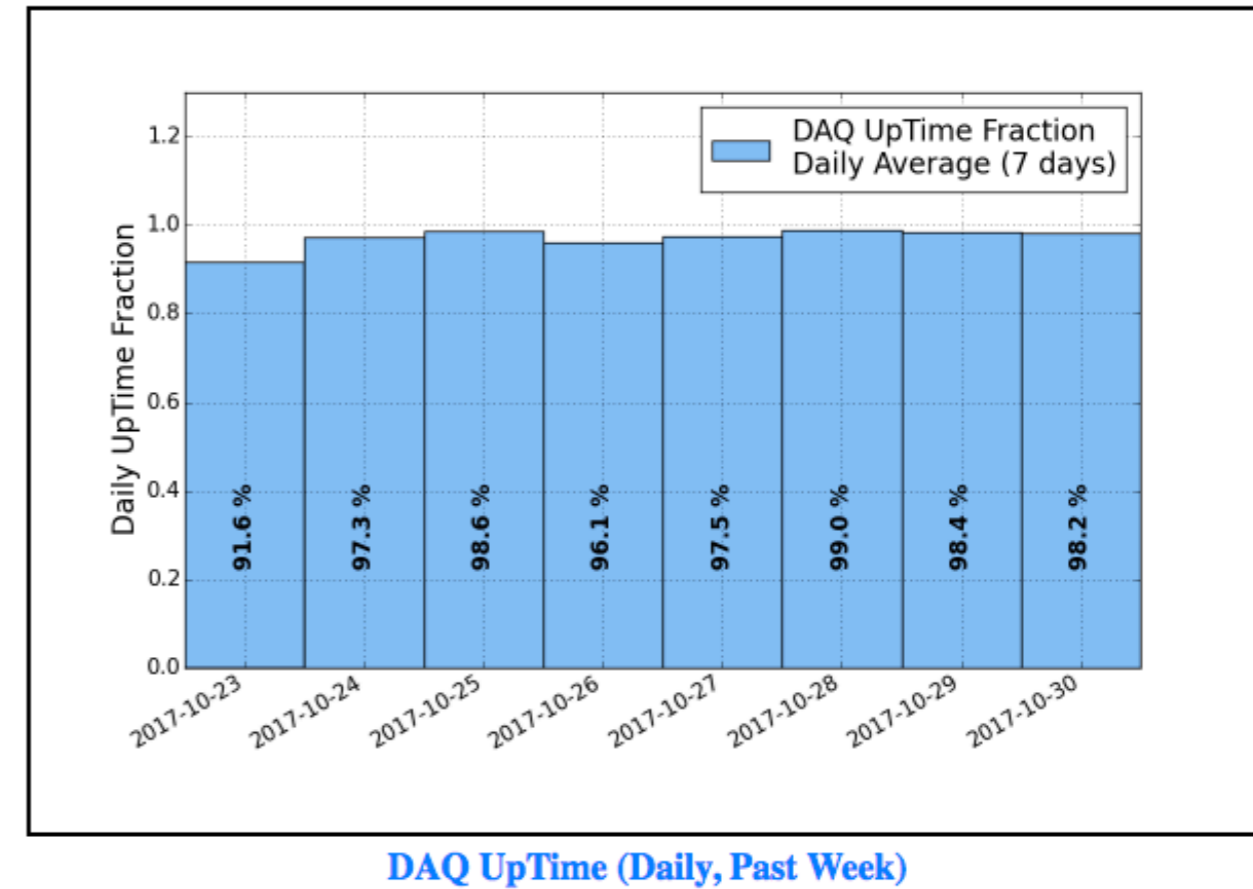

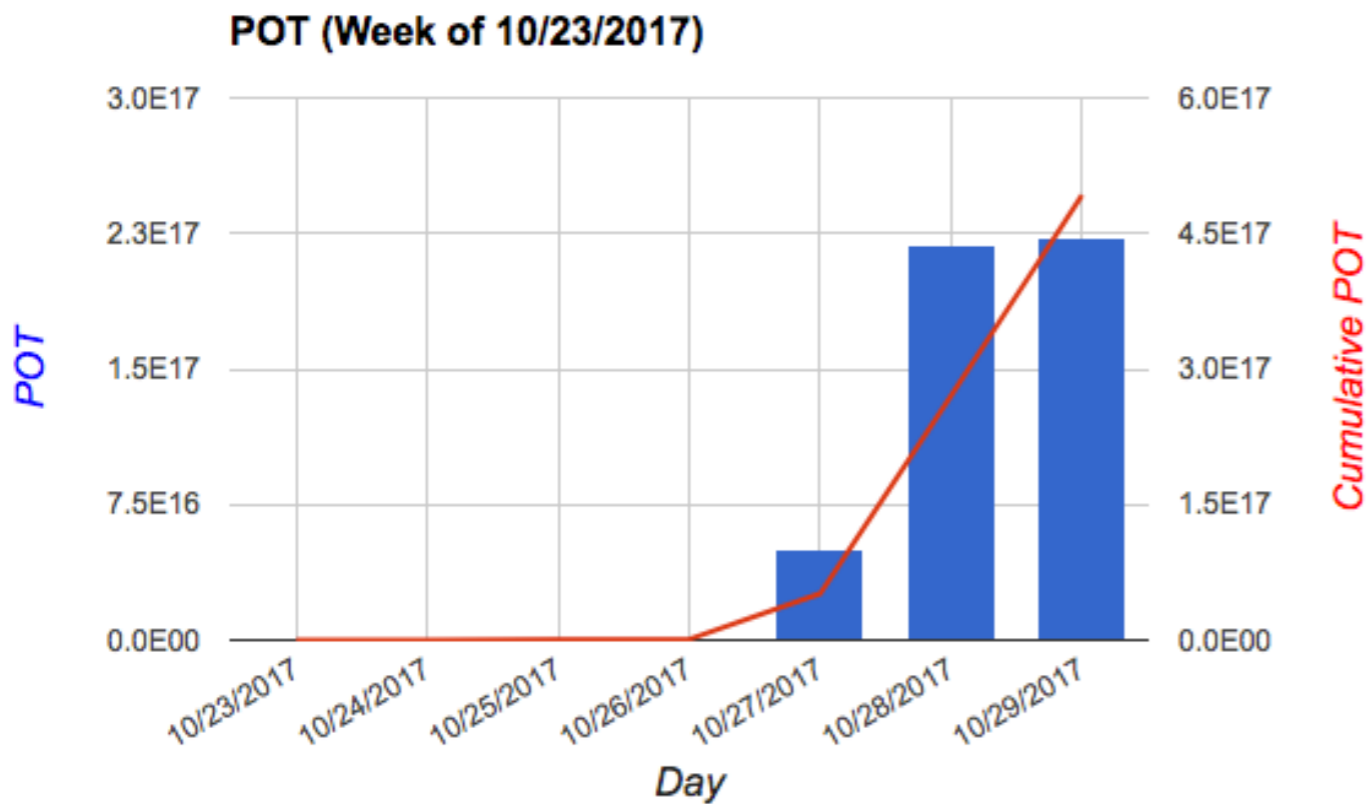

Kirsty Duffy, on behalf of the MicroBooNE Collaboration
Fermilab

AEM/Lab Status Meeting
Monday 30th October 2017

MicroBooNE Operations

- Status at last AEM (October 9th):
 - End-of-shutdown tests completed: late-light study, grounding of PMT flange, DAQ SN operations
 - Problems with router in LArTF: closely monitoring situation and stability with new hardware
 - MicroBooNE now waiting for beam
- Operation plans for last week:
 - Continue to monitor situation with LArTF router. Discussions with Network Services and Neutrino Division to develop contingency plan to minimize lost beam time should problems recur.
 - Installed standby Cisco Nexus router to mitigate possible future downtimes
 - Be ready for beam!
- Current work:
 - Beam returned Friday evening, stable running since then
 - Beam timing from resistive wall monitor looks good

Beam Statistics

- POT delivered: 4.924×10^{17}
- POT on tape: 4.849×10^{17}

Computing Summary

Average Jobs Running Concurrently

2612

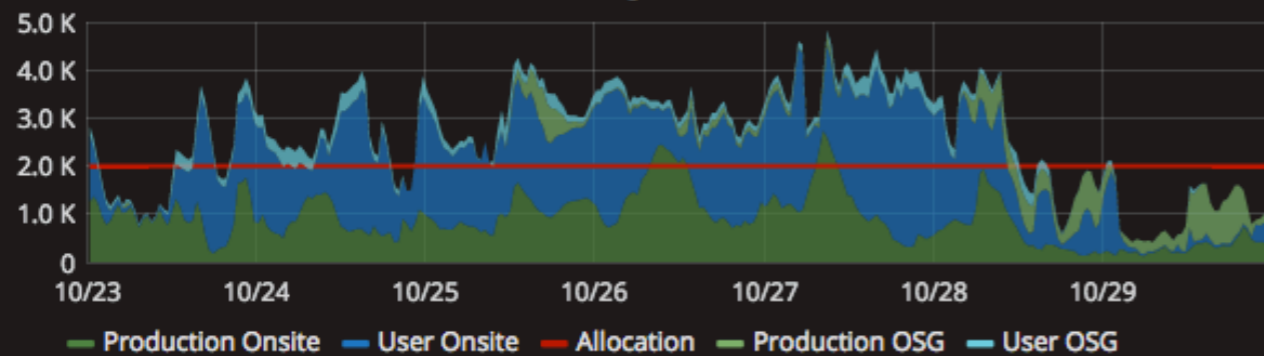

Total Jobs Run

272425

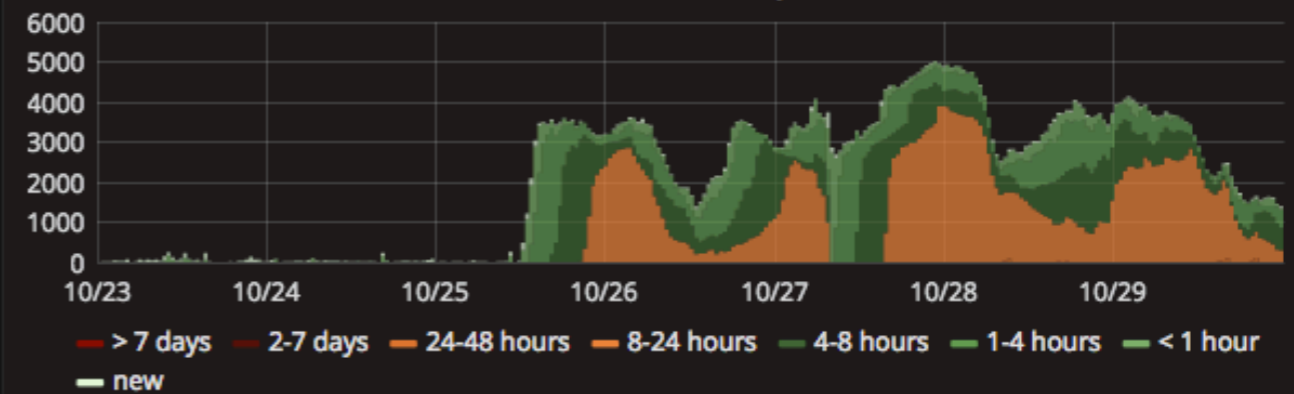

Average Time Spent Waiting in Queue (Production)

3.612 hour

Running Batch Jobs

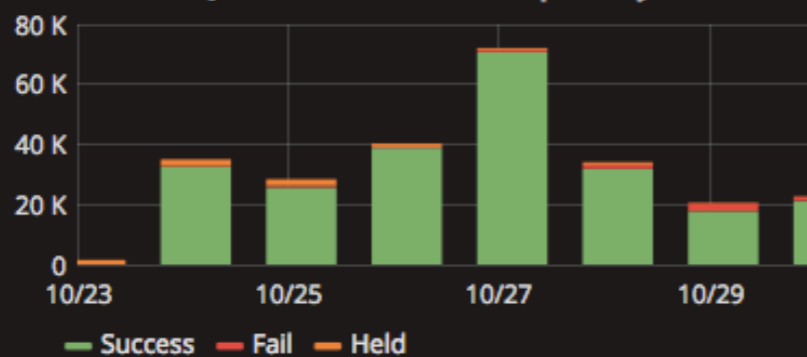

Queued Production Jobs by Wait Time

Job Success Rate

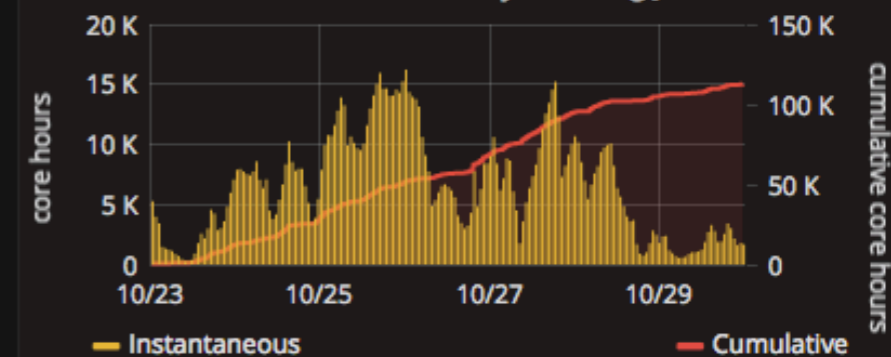

Job Success & Failures per Day

Overall CPU Efficiency

Total Time Wasted by Running Jobs

New Data Cataloged

6.7 TB

Total Data Cataloged

11.5 PB

Production

- Data and Monte Carlo processing for Neutrino 2018 has begun

Microboone Datasets Production MCC8 Reprocessing Validation using v06_26_01_08 (MCC 8.4)

Summary

- **MicroBooNE is collecting beam data!**
- Problems with router in LArTF reported last week: standby router installed to reduce downtime if problems recur
- **Beam returned on Friday evening; stable running with >98% DAQ uptime since then**
