

NOvA Experiment Report

Erica Smith

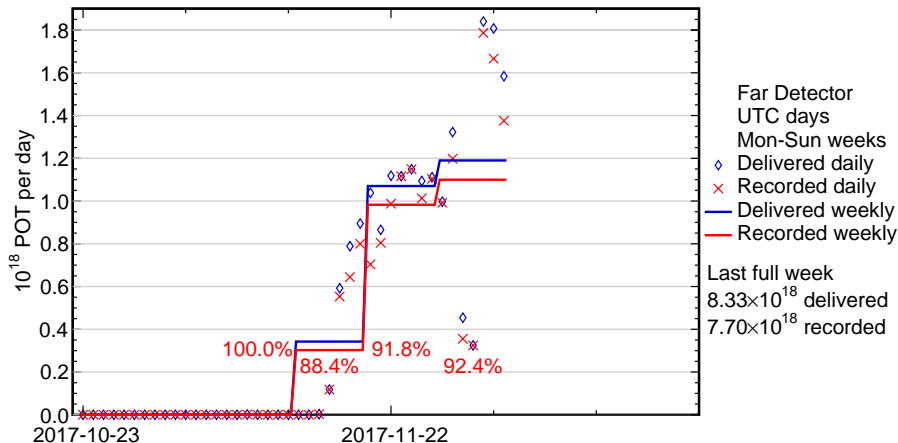

Indiana University

December 4, 2017

- new datadisk machine no longer has file transfer system backlog and performance tweaks on this machine are allowing higher network usage
- instabilities over the weekend apparently due to memory leaks on buffer nodes, will use Wednesday's beam downtime to restart processes and further diagnose
- ROC at University of Pittsburgh has completed access tests and will begin shadow shifts this week

DAQ Status and Uptime: FarDet

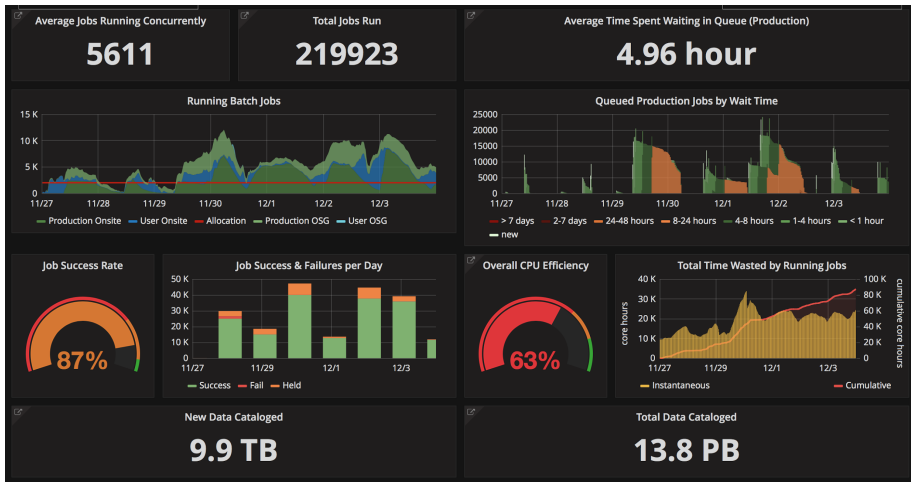

Four Week Average: 93.15%

DAQ Status and Uptime: NearDet

Four Week Average: 100.0%

- Winter production campaign making good progress. Large number of jobs processed over the weekend.
- Low onsite efficiency is dominated by a few local users jobs.
