Corrections to Dashen's theorem from lattice QCD and quenched QED

Friday, July 27, 2018 3:20 PM (20 minutes)

We use our Nf=2+1+1 staggered lattice QCD configurations to compute the corrections to Dashen's theorem and the quark mass ratio m_u/m_d . We use quark masses around their physical values, and reach the continuum limit using 5 different lattice spacings. We use the QED_L formulation, and include the QED and u-d mass difference effects in the valence sector.
