

## Test of factorization for the long-distance effects from charmonium in $B \rightarrow Kl$

*Friday, 27 July 2018 14:40 (20 minutes)*

We report on a calculation of the charmonium contribution to the decay  $B \rightarrow Kl$  using lattice simulations with 2+1 flavors of Möbius domain wall fermions.

We focus on the region of  $q^2$  below the  $J/\psi$  resonance and test the factorization approximation to estimate the amplitude.
