

Mass Splitting in a Linear Sigma Model

Tuesday, 24 July 2018 18:45 (2 hours)

We examine mass splittings in a linear sigma model which is an effective theory for a SU(3) gauge theory with N_1 flavors of mass m_1 and N_2 flavors of mass m_2 .

We discuss the consequences for current simulations done by various collaborations. We explain the relevance for BSM model building.

Primary authors: Mr DE FLOOR SILVA, Diego (University of Iowa); Mr GUSTAFSON, Erik (University of Iowa); MEURICE, Yannick (U. of Iowa)

Presenter: Mr GUSTAFSON, Erik (University of Iowa)

Session Classification: Poster reception

Track Classification: Physics Beyond the Standard Model
