

# MicroBooNE Weekly Update

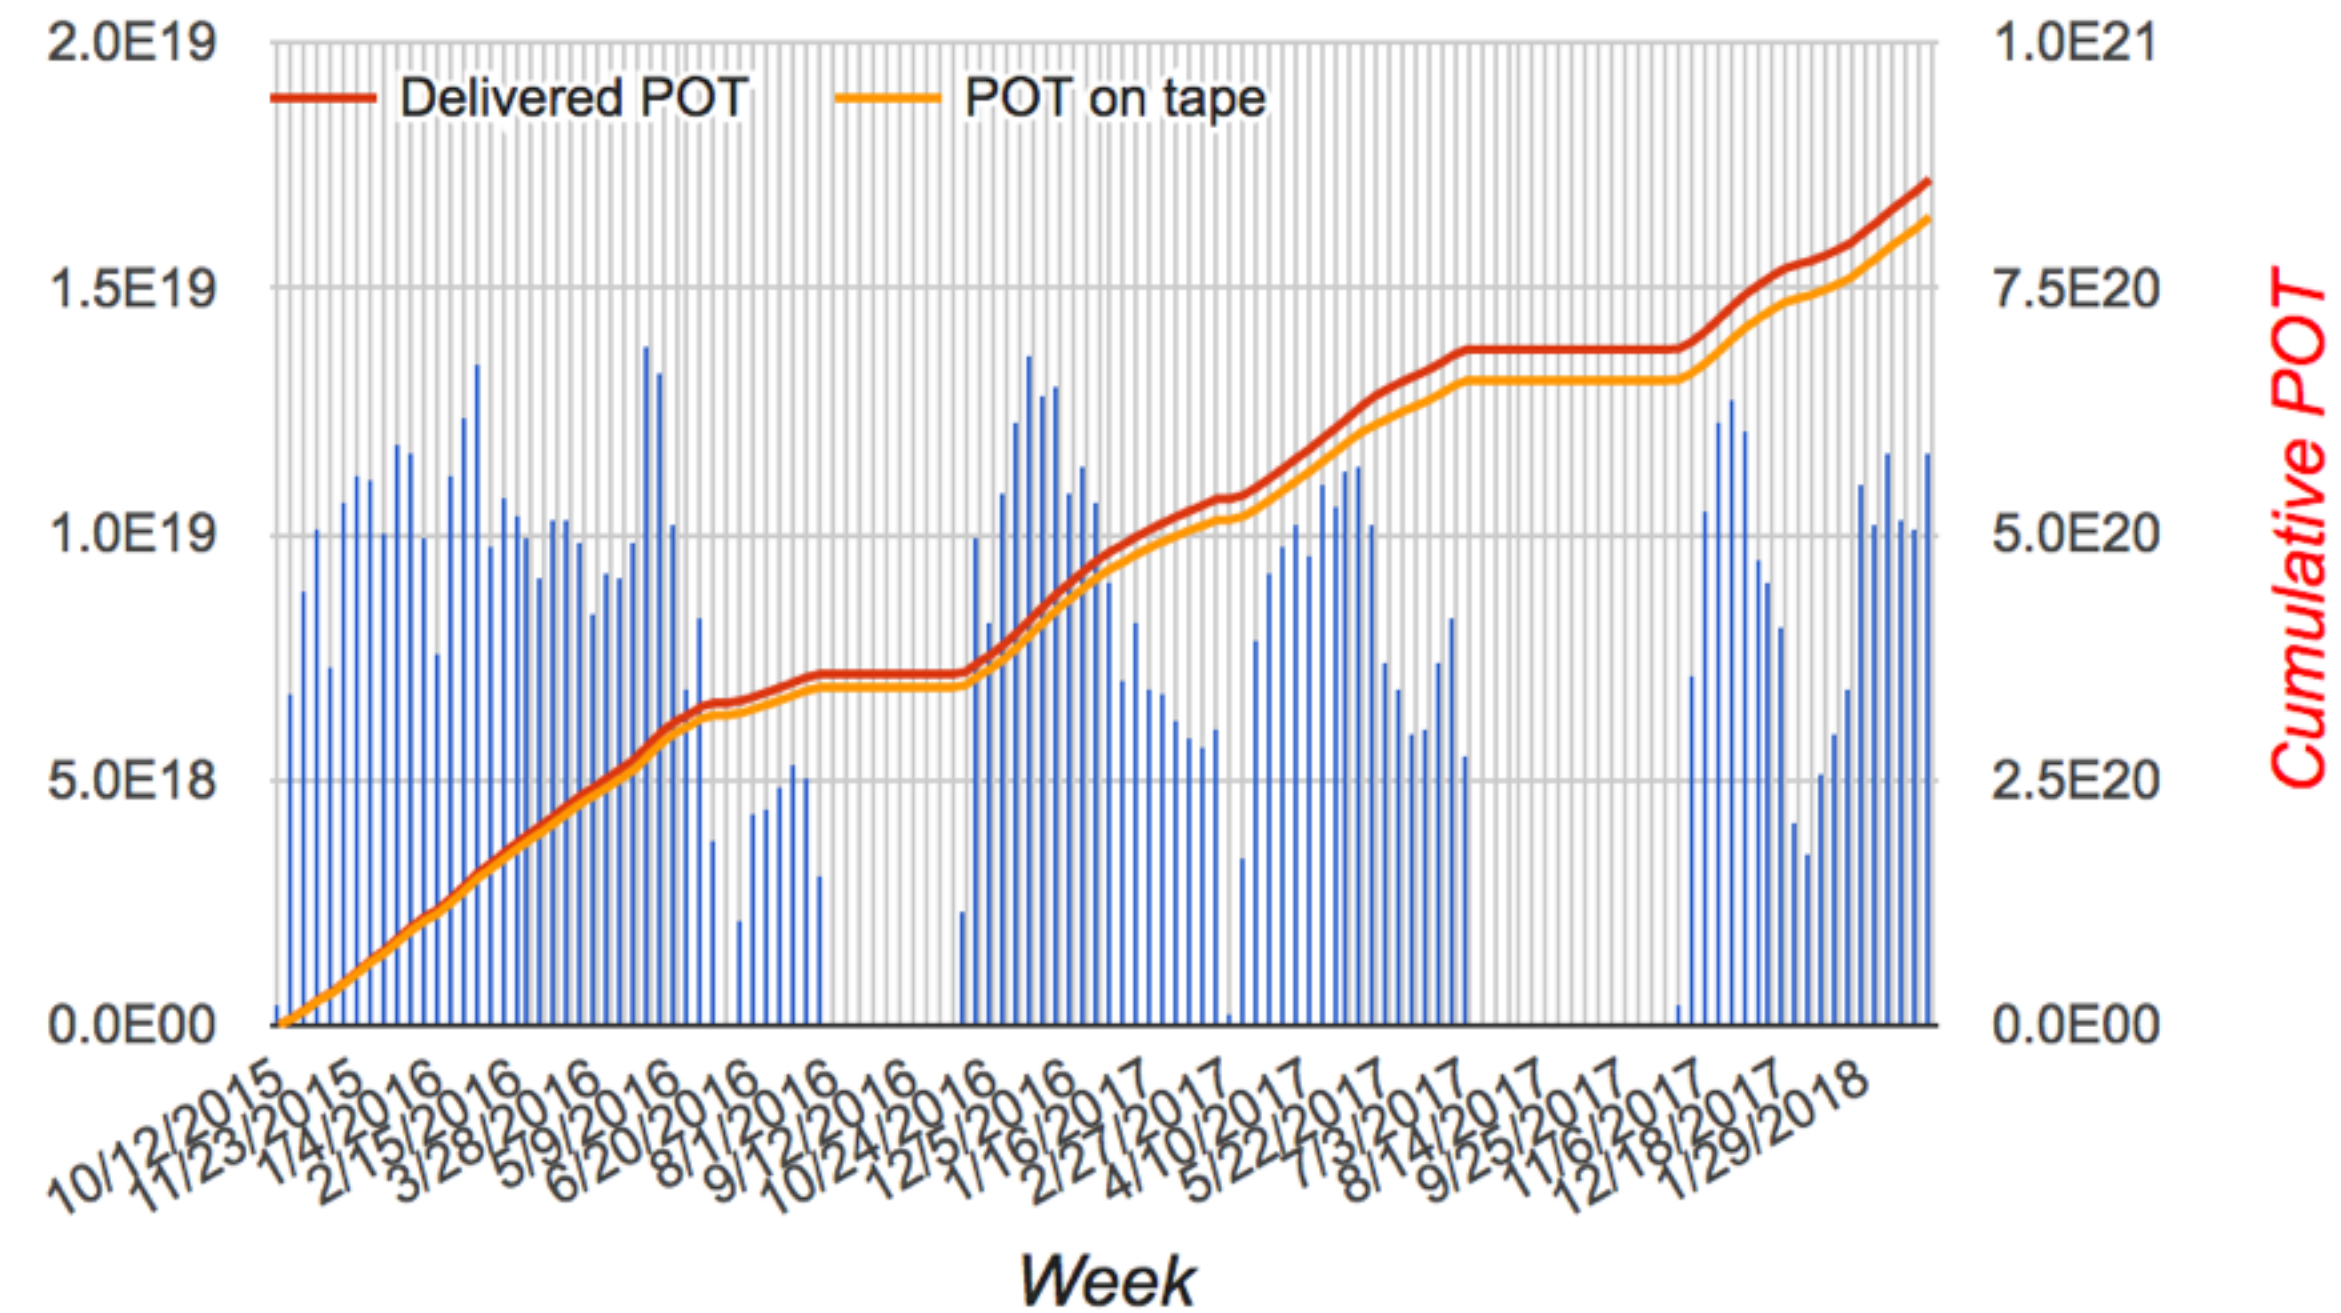

All Experimenters Meeting  
Colton Hill  
12 March 2018

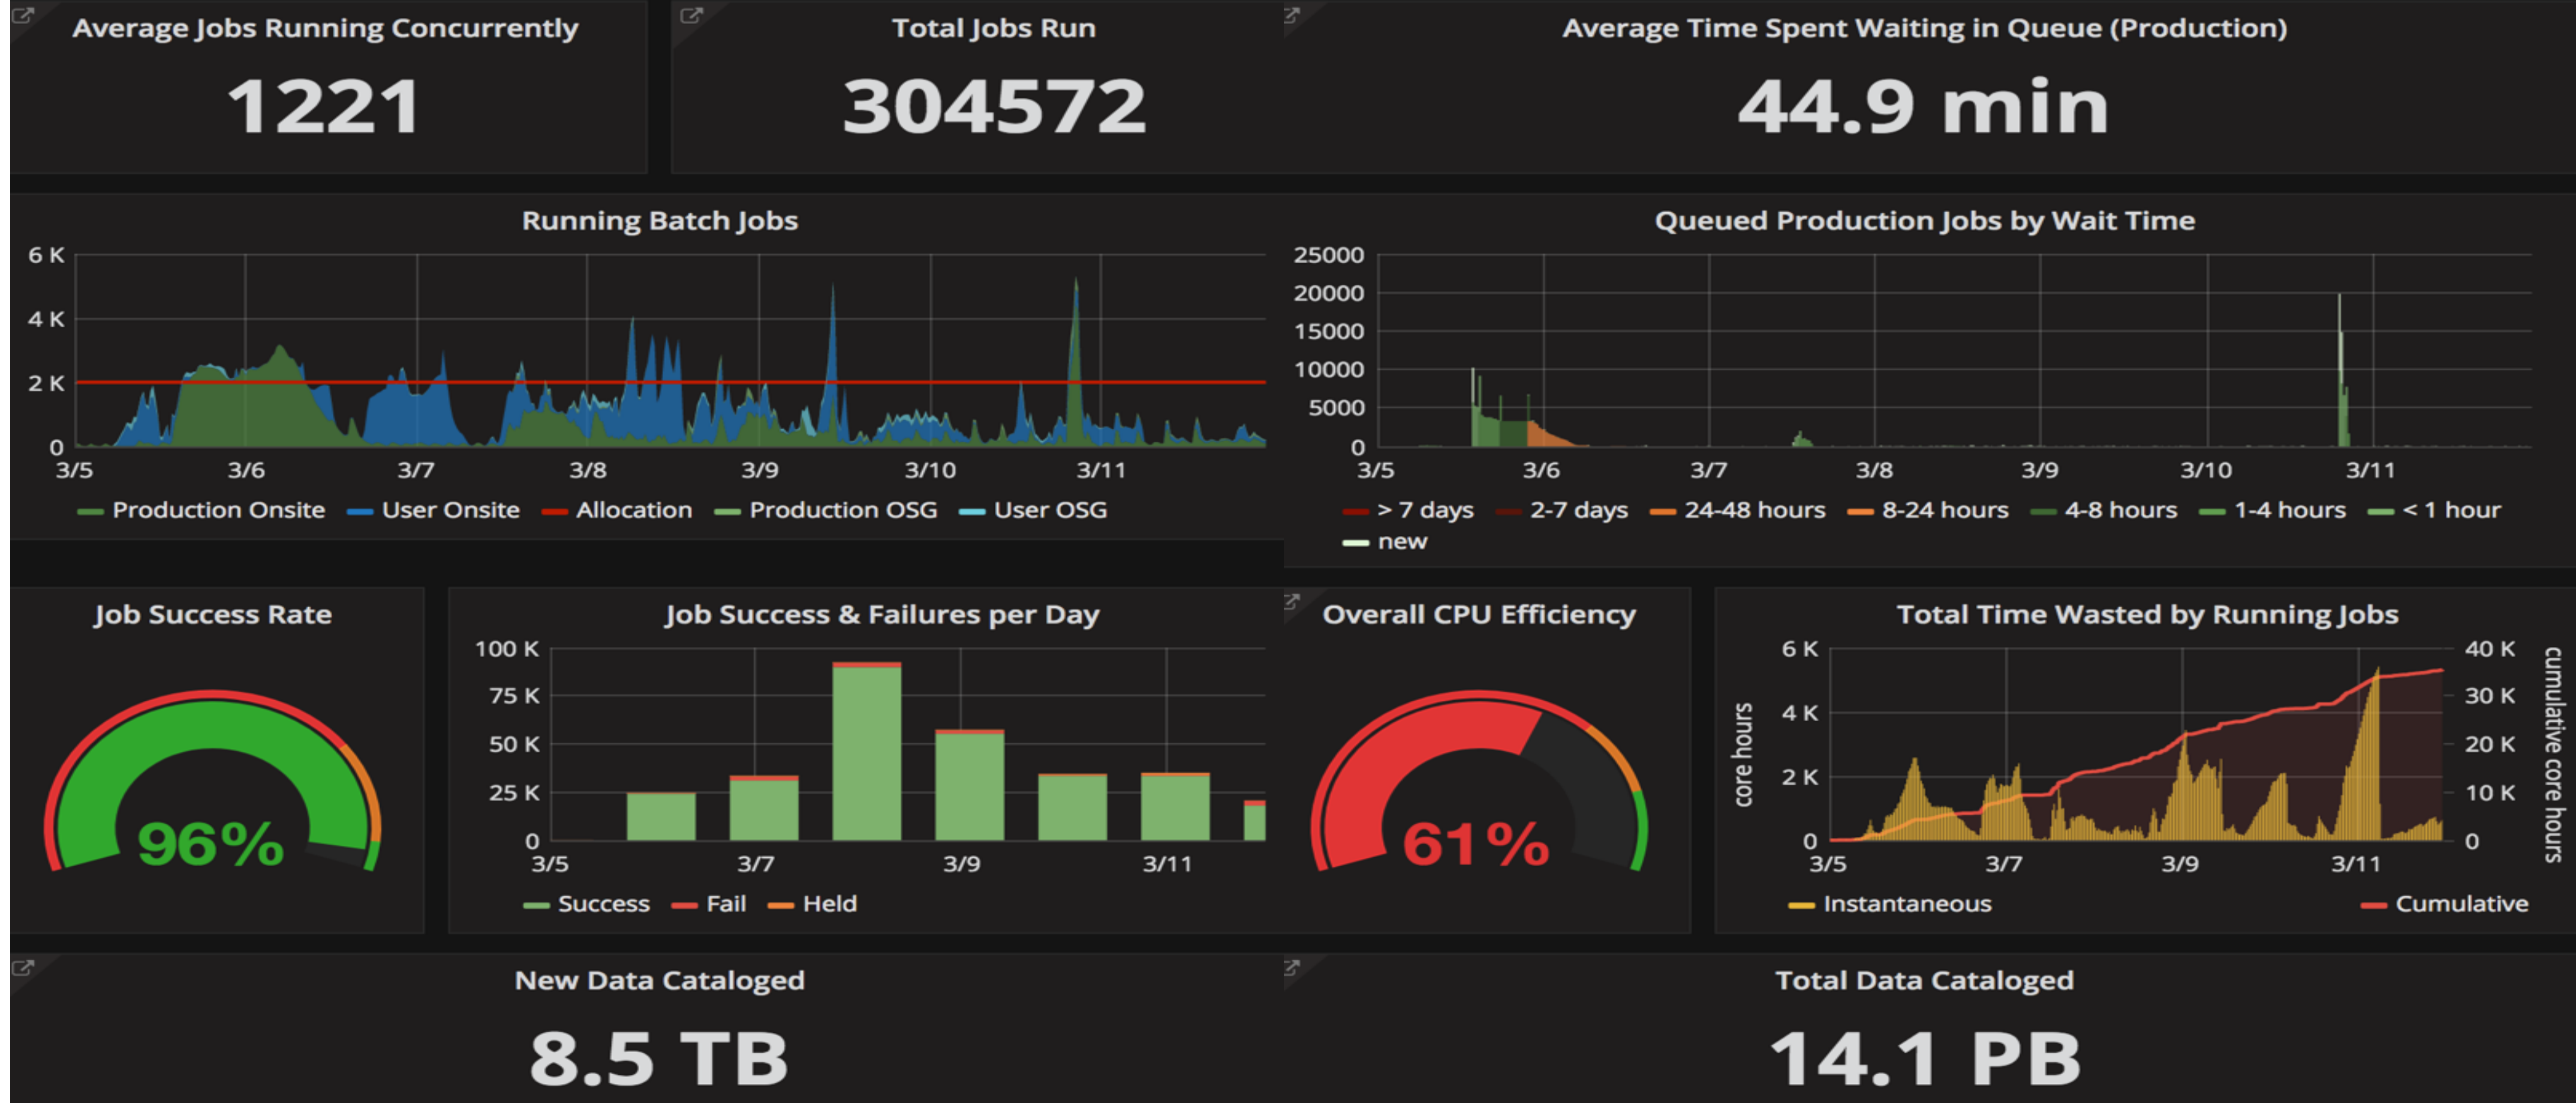

POT (Week of 3/5/2018)

POT

- 1.167e19 POT Delivered, 1.125e19 POT On Tape.
- POT weighted uptime 96%.
- DAQ stability has been great, even with factor-two increase in EXT trigger rate.

- Large-scale production effort to produce samples for our Week-long Analysis Workshop (this week).
- Queue times for production jobs average 40+ minutes, can encourage more use of off-site nodes to improve this.
- Extended drop in efficiency on Friday due to database outage.

# Weekly Summary

- We had no incidents in the week 5th - 12th of March.
- MicroBooNE continues to collect data at a stable rate.
- Over 50 collaborators are currently attending an Analysis Workshop to produce summer results at Columbia University in New York.
