- Average concurrent jobs are higher than quota (~1600) due to production job
- Job success rate is low due to missing library in one of OSG sites for production job and wrong setup for one of analyzer job.
- CPU efficiency is very low due to accessing flux files from cvmfs area
 - The efficiency was under-estimated for generator stage of production job (FIFEMon reported ~2% efficiency for ~35% CPU efficiency job from FIFE Summary)
