

University of Warwick DAQ R&D status/plans

- Jen Haigh currently working on protoDUNE/DUNE DAQ @0.5FTE
 - Jen produced and supported photon system boardreader for 35t.
 - Presently doing the same for protoDUNE-SP; also doing PDS slow control for this system.
 - Will provide operational support for protoDUNE-SP during running period.
- Have begun initial thinking about contributions to R&D.
 - Expect to focus on PDS-related items in task list.
 - Makes sense due to existing experience; in addition to DUNE work Jen has played a leading role in SiPM QA, characterisation, and calibration for T2K-ND280 detector.
 - Made contact with Alex Himmel and Giles around last CM to start discussions.
- Our timeline:
 - Some effort is available from now, but will ramp up to ~0.5FTE as development/support needs of protoDUNE ramp down.
