## *art* – current and near-term plans

- We are currently completing the implementation of *art* 3.0, which will be capable of concurrently processing events.
  - Once it is released, we intend to work with Mu2e to demonstrate scalability; this will be a time to collect user feedback and improve the implementation.
- The *art* project intends to actively support LArSoft
  - A plan is being developed to help enable LArSoft to take advantage of *art* 3.0.
- Reducing coupling
  - We have been able to remove many unneeded dependencies on ROOT.
  - As we pursue forward-looking technologies and different platforms, we will continue to prune such dependencies.
- Continue to provide computing support and expert guidance for *art* users.
