

# Upcoming LBNC Review

Eric James

Far Detector Technical Board Meeting

May 3, 2018

# Guidelines

- The upcoming meeting will be used a “kick-off” for the review of the Technical Proposal
- Committee will attempt to provide feedback in preparation for a more thorough review in August

# Details

- Because of the critical state of preparations for ProtoDUNE-DP, breakouts associated with the DP consortia are not on the schedule and are tentatively planned to be the topic of a separate phone meeting later this summer
  - Committee will receive two remote reports on ProtoDUNE-DP status and DP Technical Proposal
- No plenary reports from consortia leaders this meeting (SP and Joint consortia will be focus of one-half day of breakout sessions)

# Breakout Sessions

- No formal agenda as of yet for the breakout sessions
- Would be useful to have each of the SP and joint consortia prepare a short (~10 slide) talk to help facilitate discussions
- Committee appreciated the “standardization” of consortia leader talks at the last review and we should attempt to utilize a similar strategy here

# Presentation Outline

- Overview of Technical Proposal Section (~3 slides)
- Status of requirements development (~2 slides)
- Description of ongoing R&D activities (~3 slides)
- Progress against milestones laid out in consortia strategy documents (~2 slides)
