

Pandora:

Work ongoing and upcoming releases

L. Escudero for the Pandora Team

LArSoft coordination meeting 6th of November 2018

Overview

We have work ongoing for a few upcoming releases and would like to take the opportunity to give a heads-up and understand if the following ones need approval in LArSoft coordination meetings

PFParticleMetadata

Motivation: We have been requested to move the definition of the data object PFParticleMetadata from larpandora to lardataobj for usage in other modules avoiding cyclic dependencies

Changes: expected only in:

- lardataobj: Add PFParticleMetadata and definitions in class
- larpandora: i) Remove PFParticleMetadata (LArPandoraObjects), ii) replace usage of larpandoraobj::PFParticleMetadata and iii) add a method to help accessing metadata inside larpandora (potentially in LArPandoraInterface/LArPandoraHelper)
- dunetpc: replace usage of larpandoraobj::PFParticleMetadata (maybe other similar ones)
- Will not mean a change in output products

Status: ongoing, but not tested yet!

This one is time sensitive for MicroBooNE, what would be the timeline for this week's release?

Recob::Slices

Motivation: We are working on adding art::Assns between new data object recob::Slice and recob::PFParticle, recob::Hit

Changes: expected only in:

- larpandora: i) Produce the new associations
- Will mean a change in output products

Status: work in progress

Aiming at the next LArSoft coordination meeting Nov 20th
