We present a complete characterization of a small (9-liter) and mobile 0.1% ⁶Li-doped pulse-shape-sensitive plastic scintillator antineutrino detector called SANDD (Segmented AntiNeutrino Directional Detector), constructed for the purpose of near-field reactor monitoring with sensitivity to antineutrino direction. A detailed Monte Carlo simulation code was developed and validated to model the performance of each of the detector elements, as well as the performance of the entire detector. Analysis cuts were developed to maximize the sensitivity to the inverse beta decay (IBD) and minimize the background. The neutron and positron detection efficiencies are estimated to be 34% and 78%, respectively, resulting in antineutrino detection efficiency of 19%±1.0%(stat.)±2.0%(syst.). An uncertainty of 25° in the direction of the reactor antineutrino flux is predicted from 100 detected antineutrino events.

Motivation and antineutrino detection

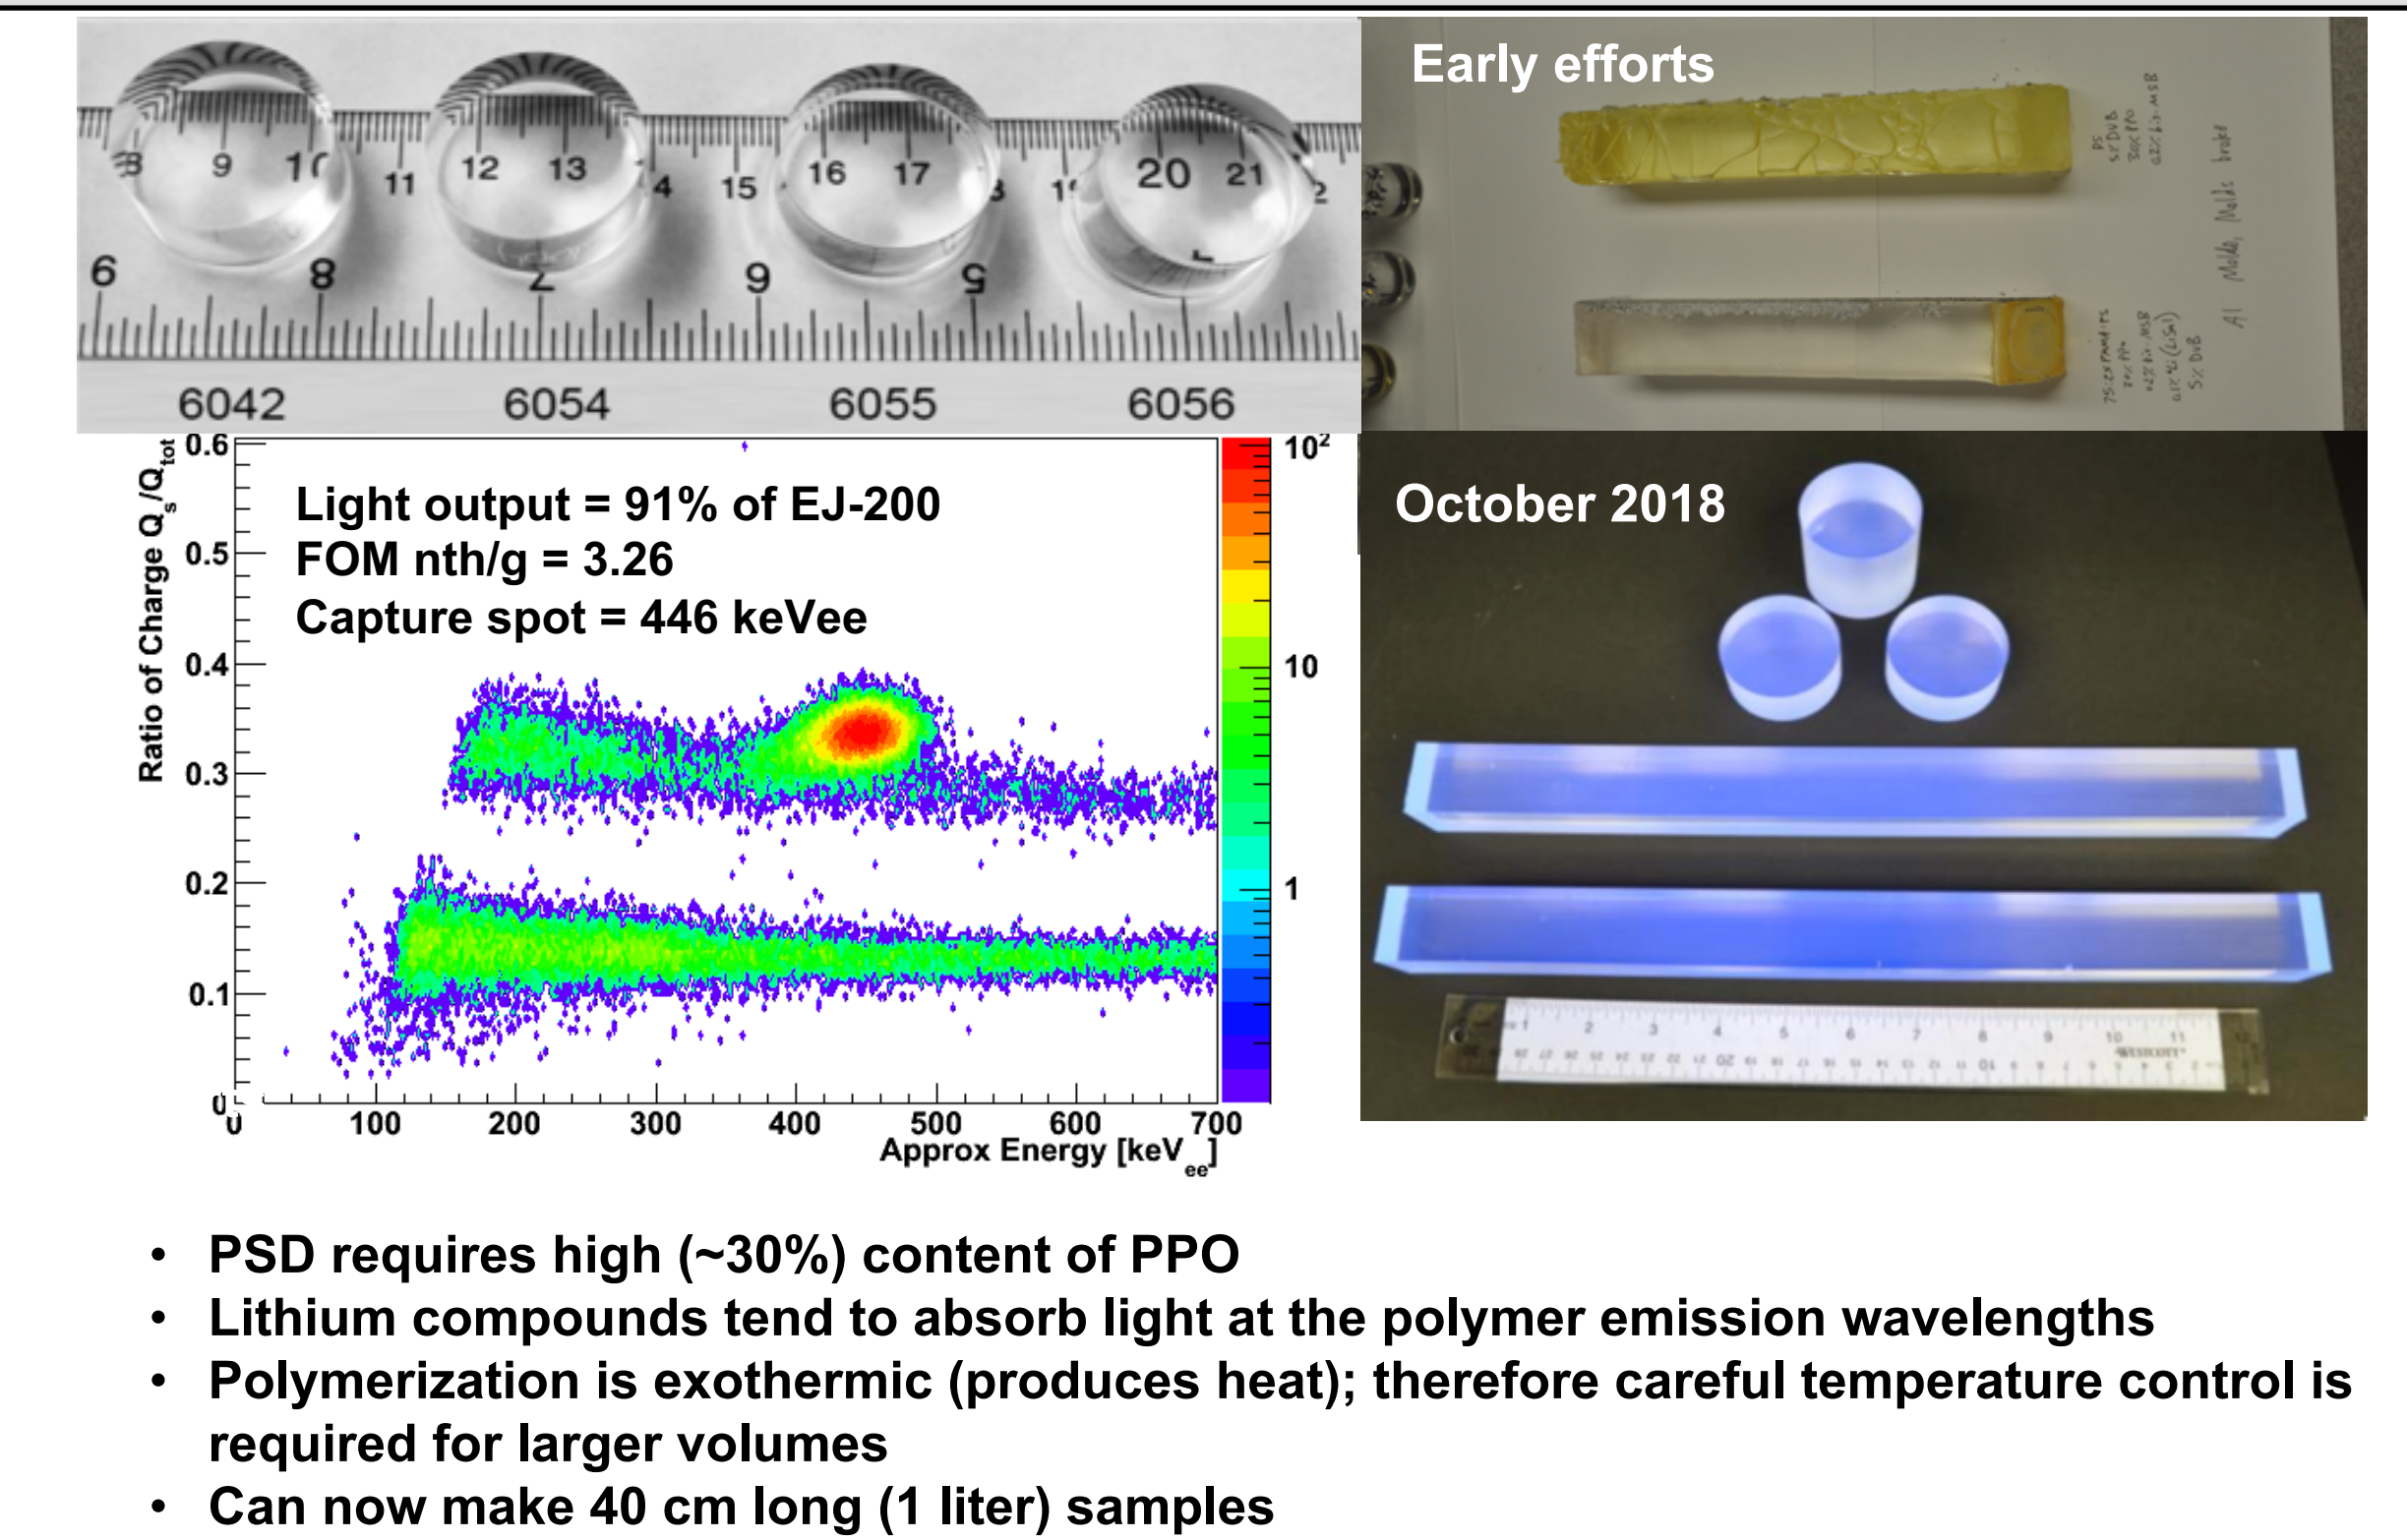

6 antineutrinos per fission × ~10²¹ fissions per second in a 3,000-MWt reactor = ~10²² antineutrinos per second unattenuated and in all directions

Pulse shape discrimination and energy resolution

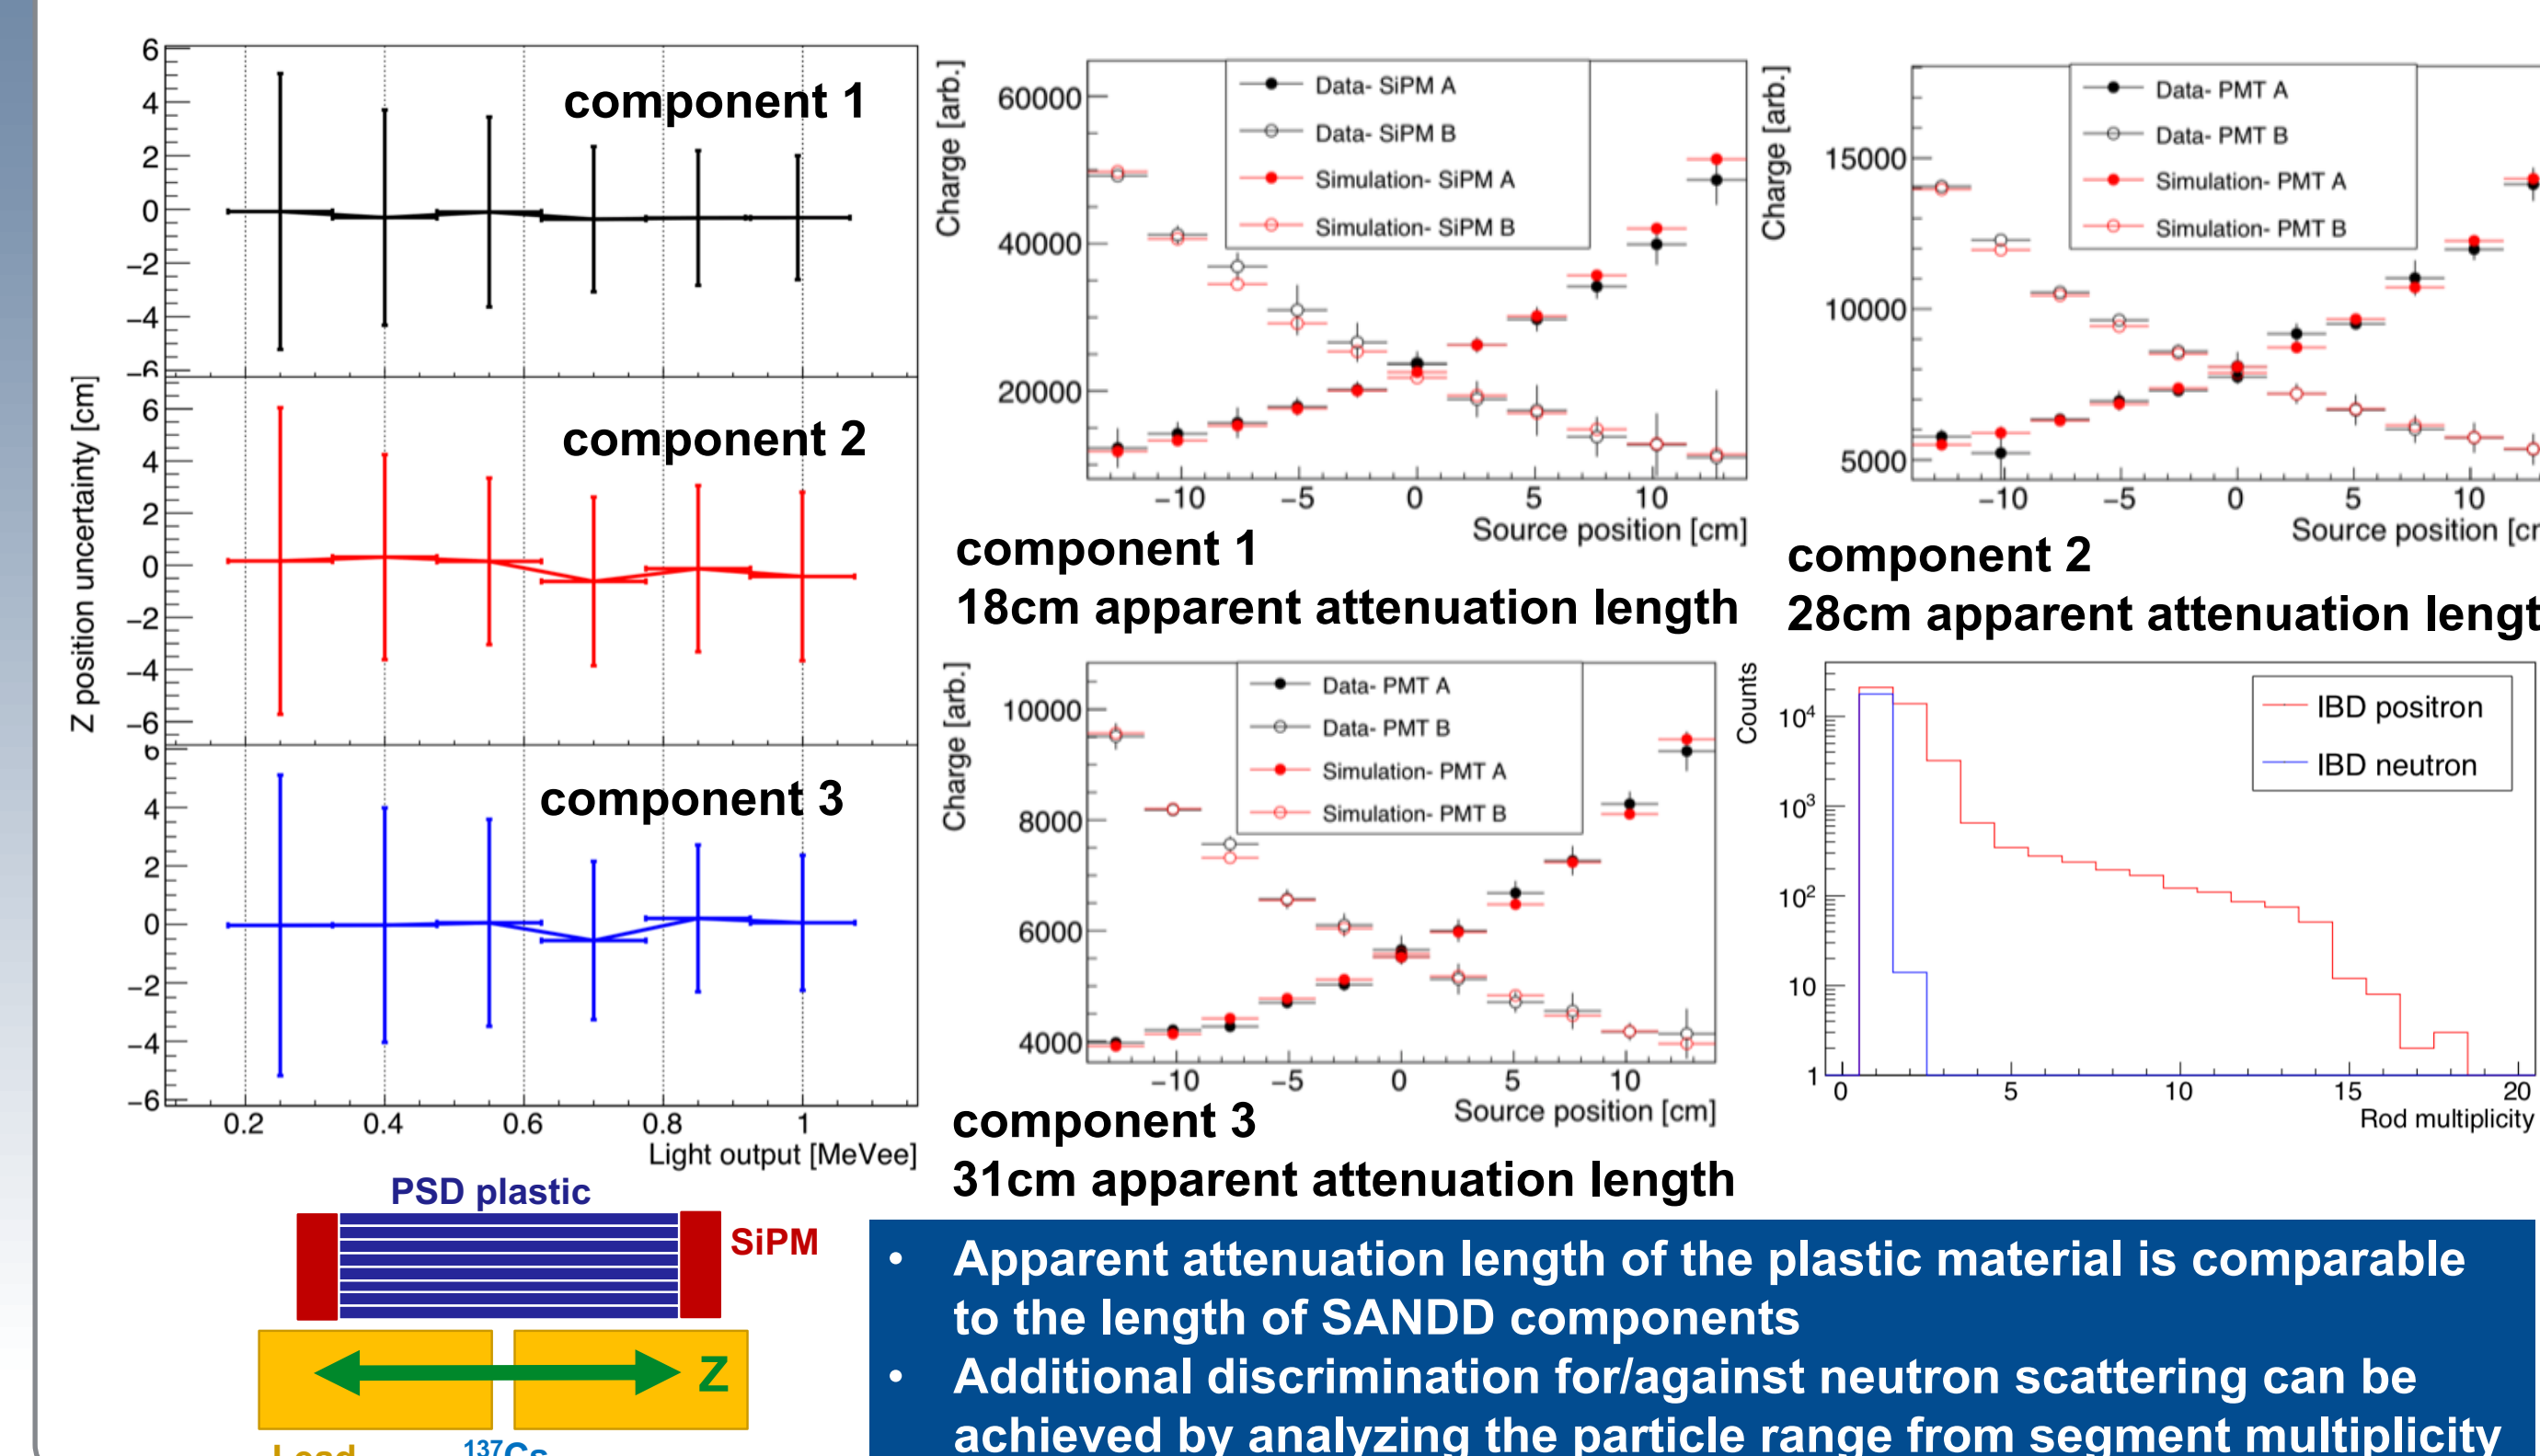

Status of Li-doped PSD plastic development

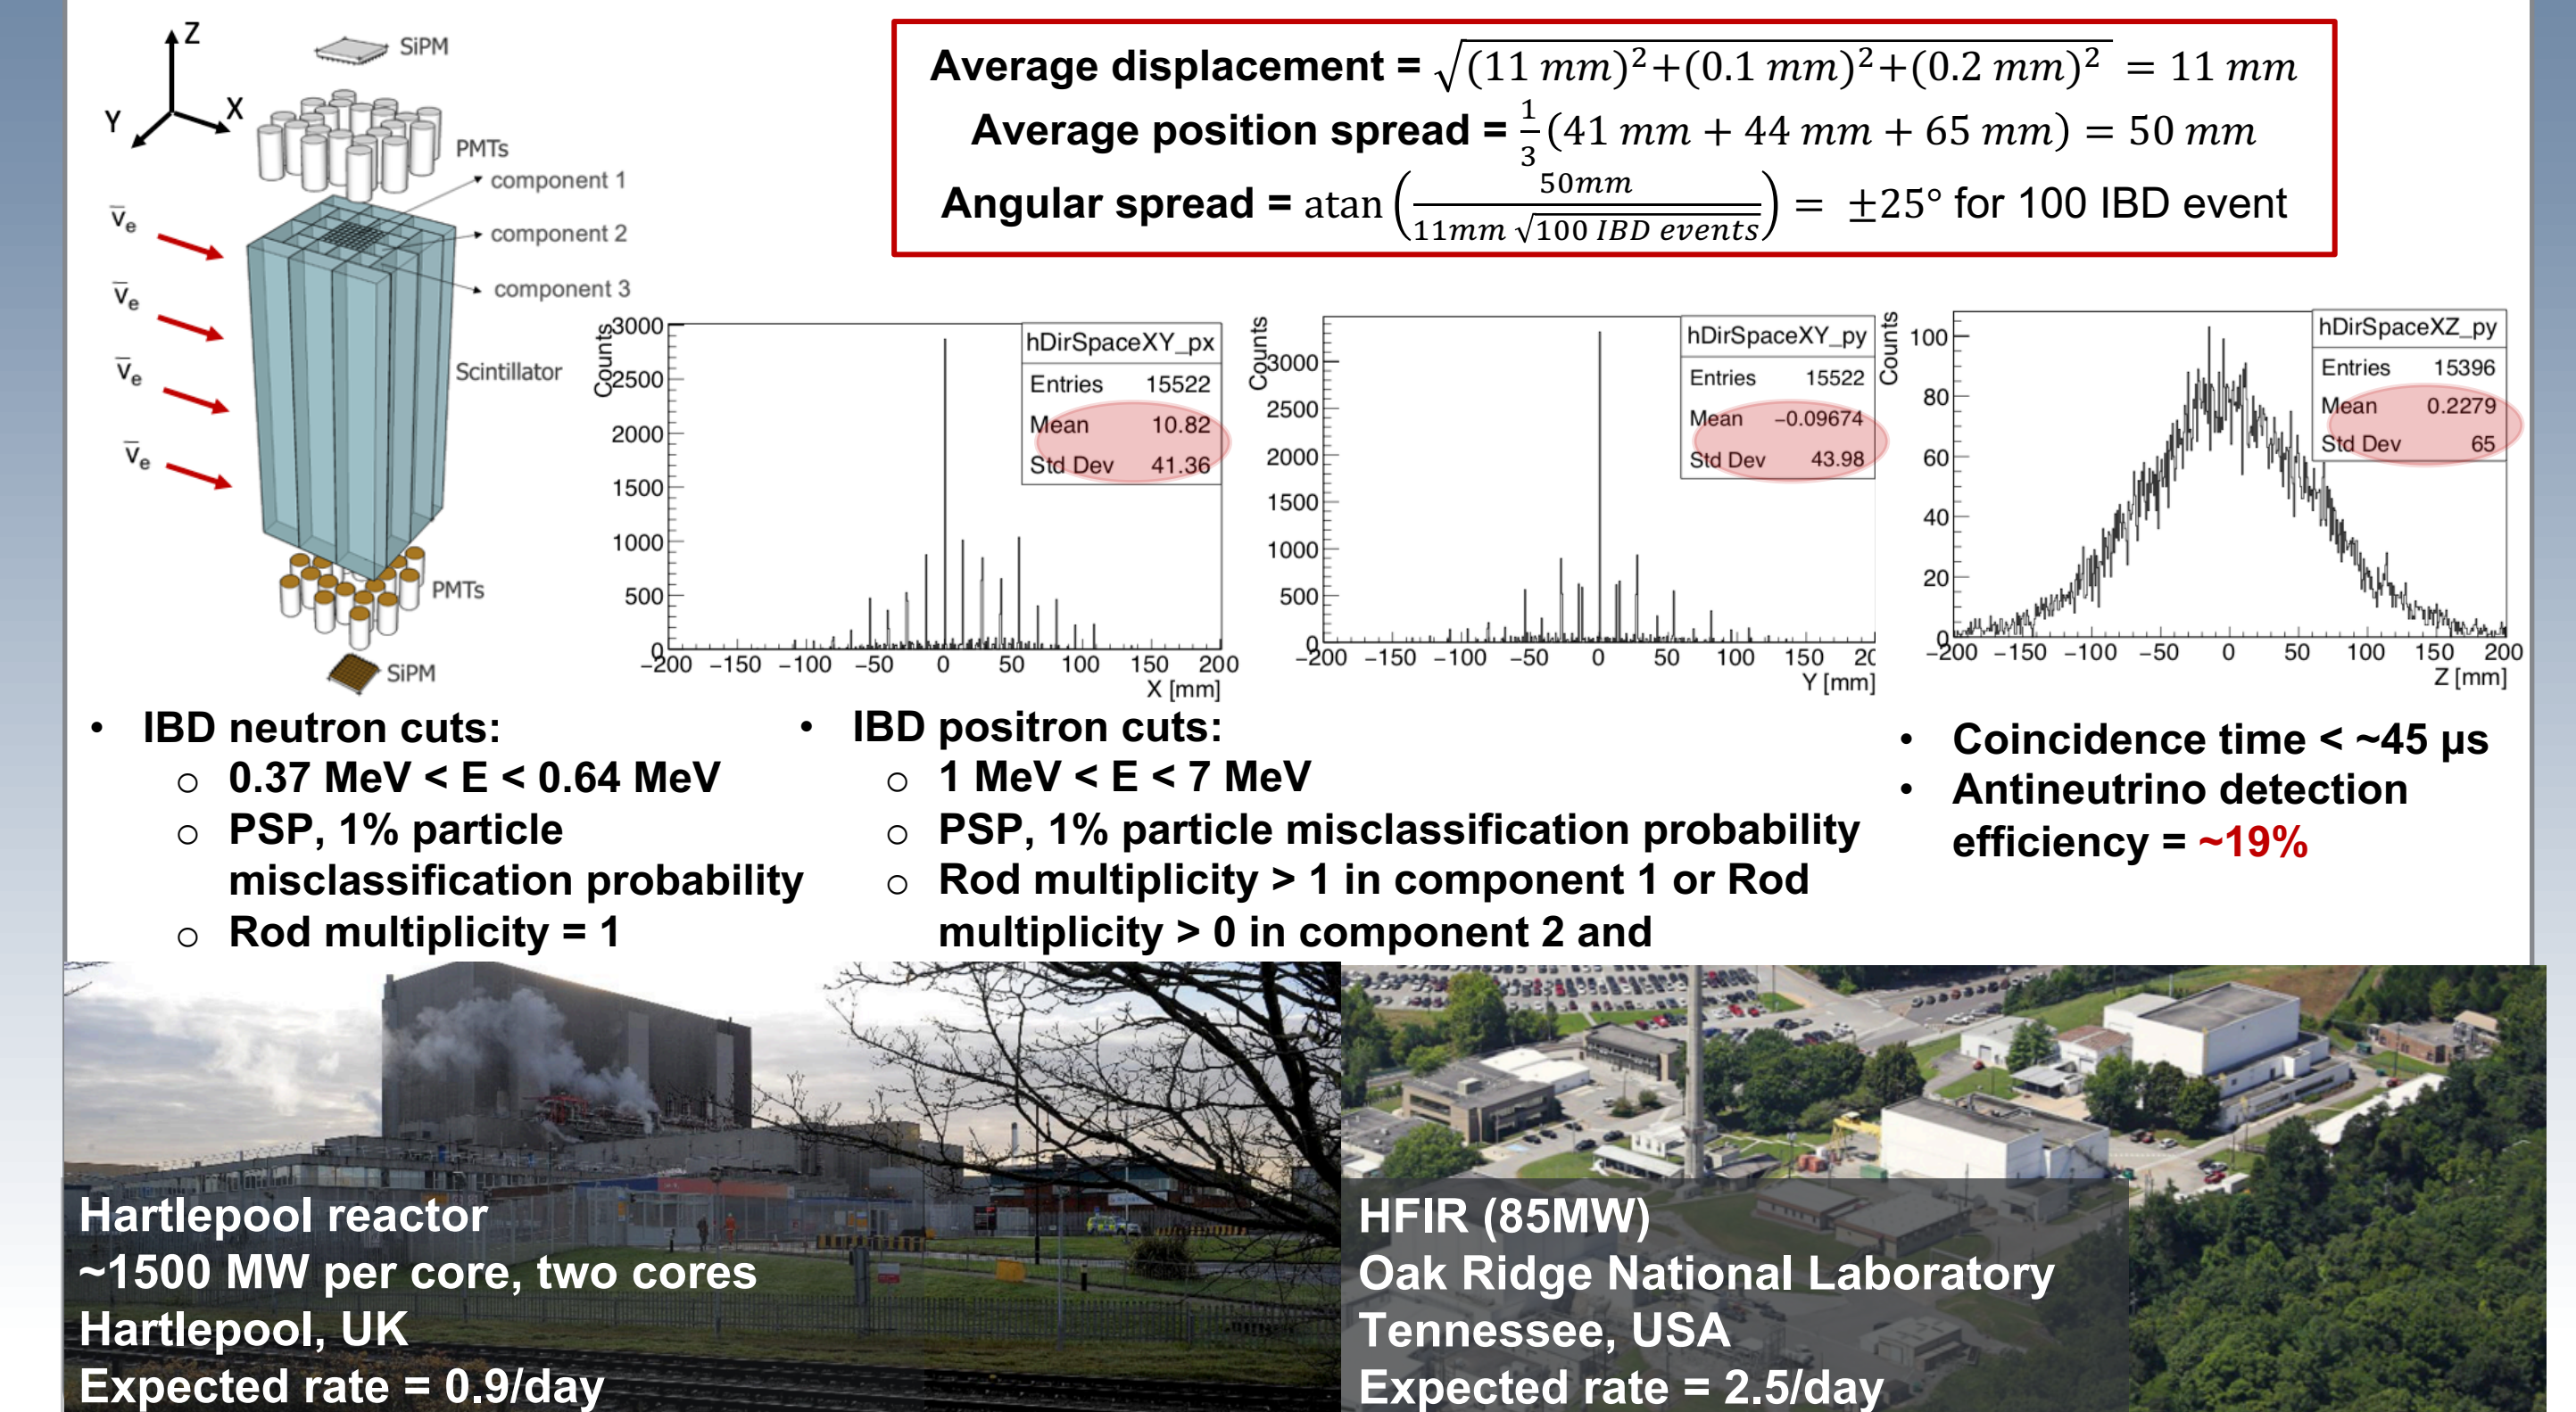

SANDD (Segmented AntiNeutrino Directional Detector)

Apparent attenuation length, Z-position resolution, and rod multiplicity

Simulated antineutrino detection efficiency, directional performance, and potential deployment sites

The authors wish to acknowledge Natalia Zaitseva of LLNL for helpful discussions regarding scintillator development. We also thank Ultralytics and Struck engineers for their support and useful discussions. The research of F. S. was performed under the appointment to the Lawrence Livermore Graduate Scholar Fellowship and Rackham Merit Fellowship. The work of I.J. and F.S. was partially supported by the Consortium for Monitoring, Technology, and Verification under U.S. Department of Energy National Nuclear Security Administration award number DE-NA0003920. This work was supported by the U.S. Department of Energy National Nuclear Security Administration and Lawrence Livermore National Laboratory [Contract No. DE-AC52-07NA27344, LDRD tracking number 17-ERD-016 and 20-SI-003, release number LLNL-POST-811166].
