

P05: MTD Cost, Schedule, Risk and Outcome of the OPSS Review

Frank Chlebana (Deputy L2 MTD Manager)

Fermilab CD-1 Director's Review

19 March 2019

Outline

- Basis of estimate
- Schedule development
- Responses to the OPSS review
- Costs
- Milestones
- Synchronization with the international MTD schedule
- Risk
- Critical Path
- Float

Basis of Estimate (BoE)

Basis of Estimates and supporting documentation are available in DocDB

Detailed description of scope, vendor quotes, and a summary of how the costs and labor effort was determined

L2 Parent:WBS : 402.8 TL - TIMING LAYER (12)

L3 Parent:WBS : 402.8.2 TL - Management (1)

Vendor Quotes

All estimates for the major cost drivers are based on recent vendor quotes

LYSO: 14 vendors contacted, received quotes from 11 vendors (as of Nov 10, 2018)

SiPM: Hamamatsu-SiPM (Feb 26, 2019)

Concentrator Cards: Bill of material parts list, PCB production (Sep 10, 2018)

BTL Assembly: Pick and place gantry and stencil printer (Aug 15, 2018)

LGAD: Shipping estimate (Sep, 2018), FBK-LGAD (Nov 10, 2018)

ASIC: MWP, Fabrication, Estimates for Multi-project Wafer submission and maskset are based on contractual agreement between CERN and foundry (Sep 20, 2018)

ETL Assembly: Service contract, misc parts, AIN quote (Jan 2019)

System testing: *Estimates based on previous experience from the Phase 1 Tracker*

OPSS Review

Cost and schedule were reviewed during the Office of Project Support Service's (OPSS) Cost, Schedule, and Risk (CSR) review in Jan 2019

- Provided a detailed list of feedback (next slide)
- Clarify / improve BOE documentation
- Fix schedule logic (missing successors, predecessors)
- Add missing codes to P6
- Change generic university with institute specific codes
- Add correct MIE / OPC codes
- Establish critical path
- *Long duration activities with Start-to-start logic (being worked on)*

We have implemented updates to the schedule and have provided responses to most of the feedback

OPSS Review Feedback and Responses

Can milestones be used to measure schedule float? Mandatory constrained milestones override float and make identification of critical path impossible.</p> <p>For CD-1 review, the schedule must reflect the project's critical path. There are issues with the critical path we viewed</p> <ol style="list-style-type: none"> The Mandatory Start/Finish constraints create a new critical path. They need to be changed to soft constraints or removed, in order to truly see the project's critical path <p>These constraints are necessary because they reflect the external commitment dates from iCMS (e.g. delivery of ASICs needed by the US activities). We cannot simply remove these constraints. And indeed, some of these deliverables do have an influence on the US critical path.</p> <ol style="list-style-type: none"> Several activities have a high duration. One we looked at was five months and another was nine months There are SS relationships with lag. Justification for the lag is not contained in the Constraint/Lag Notes UDF There is negative total float <p>We have adjusted the schedule so we no longer have negative float.</p> <ol style="list-style-type: none"> We looked at the -10d TF activities, which are predominantly prototype or simulation. Having these types of activities, which precede pre-production or production effort does not give me confidence that the end date is achievable There are FLOAT activities in the schedule (900+ day duration) to show the float between milestones (such as KPP) and CD-4. They are coded as LOE activity type; therefore, they do not show up on the critical path. They mask the total float <p>We saved a copy of the Schedule Log (in the PARSII folder). In addition to the negative float, it shows issues with the following:</p> <ol style="list-style-type: none"> 136 activities with constraints Missing Predecessors (44) and Successors (159) <p>We have added many of the predecessors and successors and will continue to work on this.</p> <ol style="list-style-type: none"> Two milestone activities with invalid relationships (Finish Milestones with SS relationship with Predecessor) <p>There are too many SS and FF relationships. The majority could be FS relationships. Also, when building a baseline plan, it is best to logically tie activities with a FS relationship</p>
---	--	---	--	--	---	---	--

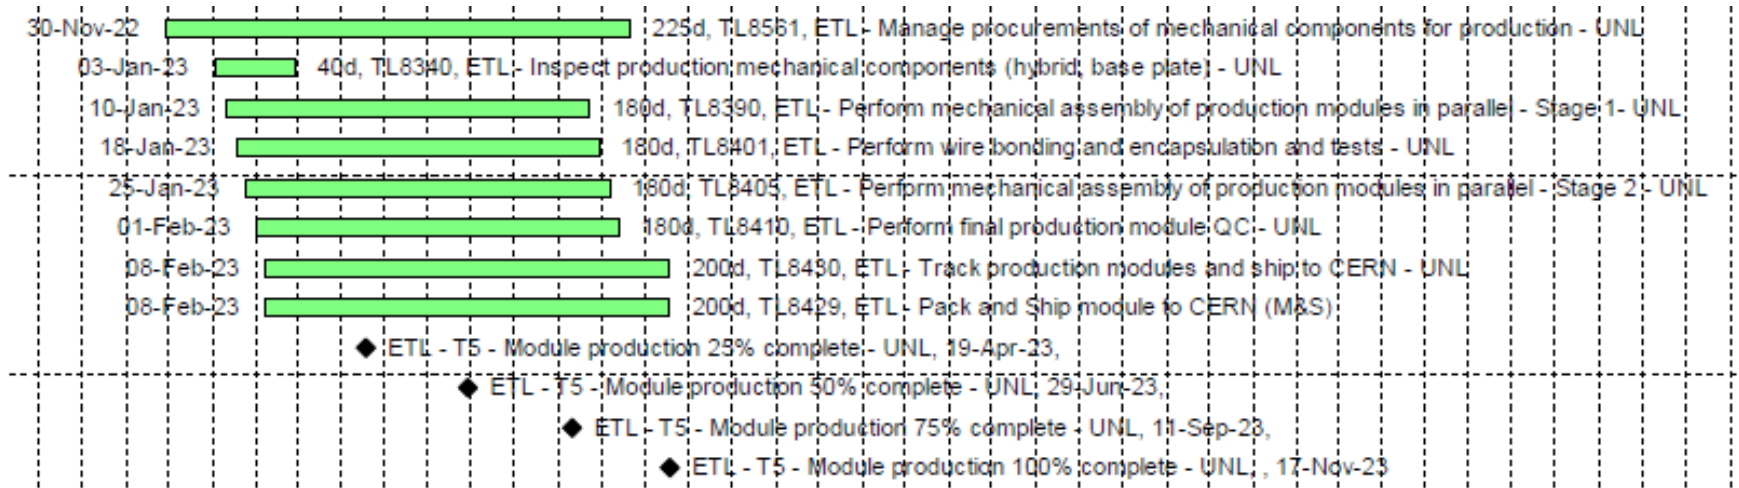

OPSS Review Follow Up

We will continue to improve the schedule between now and the CD-1 review

- Further develop the system testing plan
- Break up the long duration activities
- Remove SS and lags in the connection logic
- Refine the interface with international deliverables (bump bonding)
- Review activity sequencing to see if we can increase the float

Example of using long duration activities with start-to-start logic and a lag in the schedule to get the cost estimate → *split into finer detailed activities to facilitate monitoring by the CD-1 review*

The MTD schedule is well advanced, provides a solid cost estimate, allows us to do a critical path analysis, and estimate the risk impact to the schedule

Timing Layer Costs (Project Cost Book)

402.8-TL-Base Budget Profile (DOE)-WBS L3 Subprojects
BAC = \$11.36M (AY\$)

402.8-TL-WBS L3 Base Budget Breakdown (DOE)
BAC= \$11.36M (AY\$)

Main M&S Cost Drivers (>500k\$)

Material	Obligation Date	Direct Cost (k\$)	Total Cost (k\$)	Approval Date
SiPM production	8/1/2020	950	1200	CD-3b (Apr 2020)
LYSO production	6/1/2020	1137	1421	CD-3b (Apr 2020)
ETROC preproduction	1/1/2022	728	939	CD-3 (Nov 2020)
ETROC production	7/1/2022	887	1166	CD-3 (Nov 2020)

Main cost drivers represent ~46% of the MTD M&S cost
Estimate uncertainty of 15%

ETROC pricing is well-defined via the IMEC/CERN agreement.

The LYSO pricing is based on the recent vendor quotes from 8 vendors, and our assumed cost is the mean of the responses from the vendors. LYSO is a commonly available commodity in the medical industry. We are not doing anything exotic in terms of its specification or preparation --hence our needs are similar to existing designs with little or no modifications.

SiPM pricing is based on a recent vendor quote from HPK. These SiPMs that were the subject of the vendor quote reflect a nearly-completed design and are similar to the design used for the HCAL upgrade, for which costs are documented.

Timing Layer Labor

402.8-TL-Base Budget Profile (DOE)-Institutions
BAC = \$11.36M (AY\$)

The main labor cost is for the ASIC development

402.8-TL-Base Labor Profile (DOE)-Costed & Contributed
Total = 91.5 FTE-yrs

Contributed labor is mainly in the LYSO, LGAD, System testing, I&C, and the R&D phase of Assembly

The areas with technical deliverables, SiPM, CC, ASIC, are done with mostly costed labor

Assembly production is done with a combination of costed and contributed labor

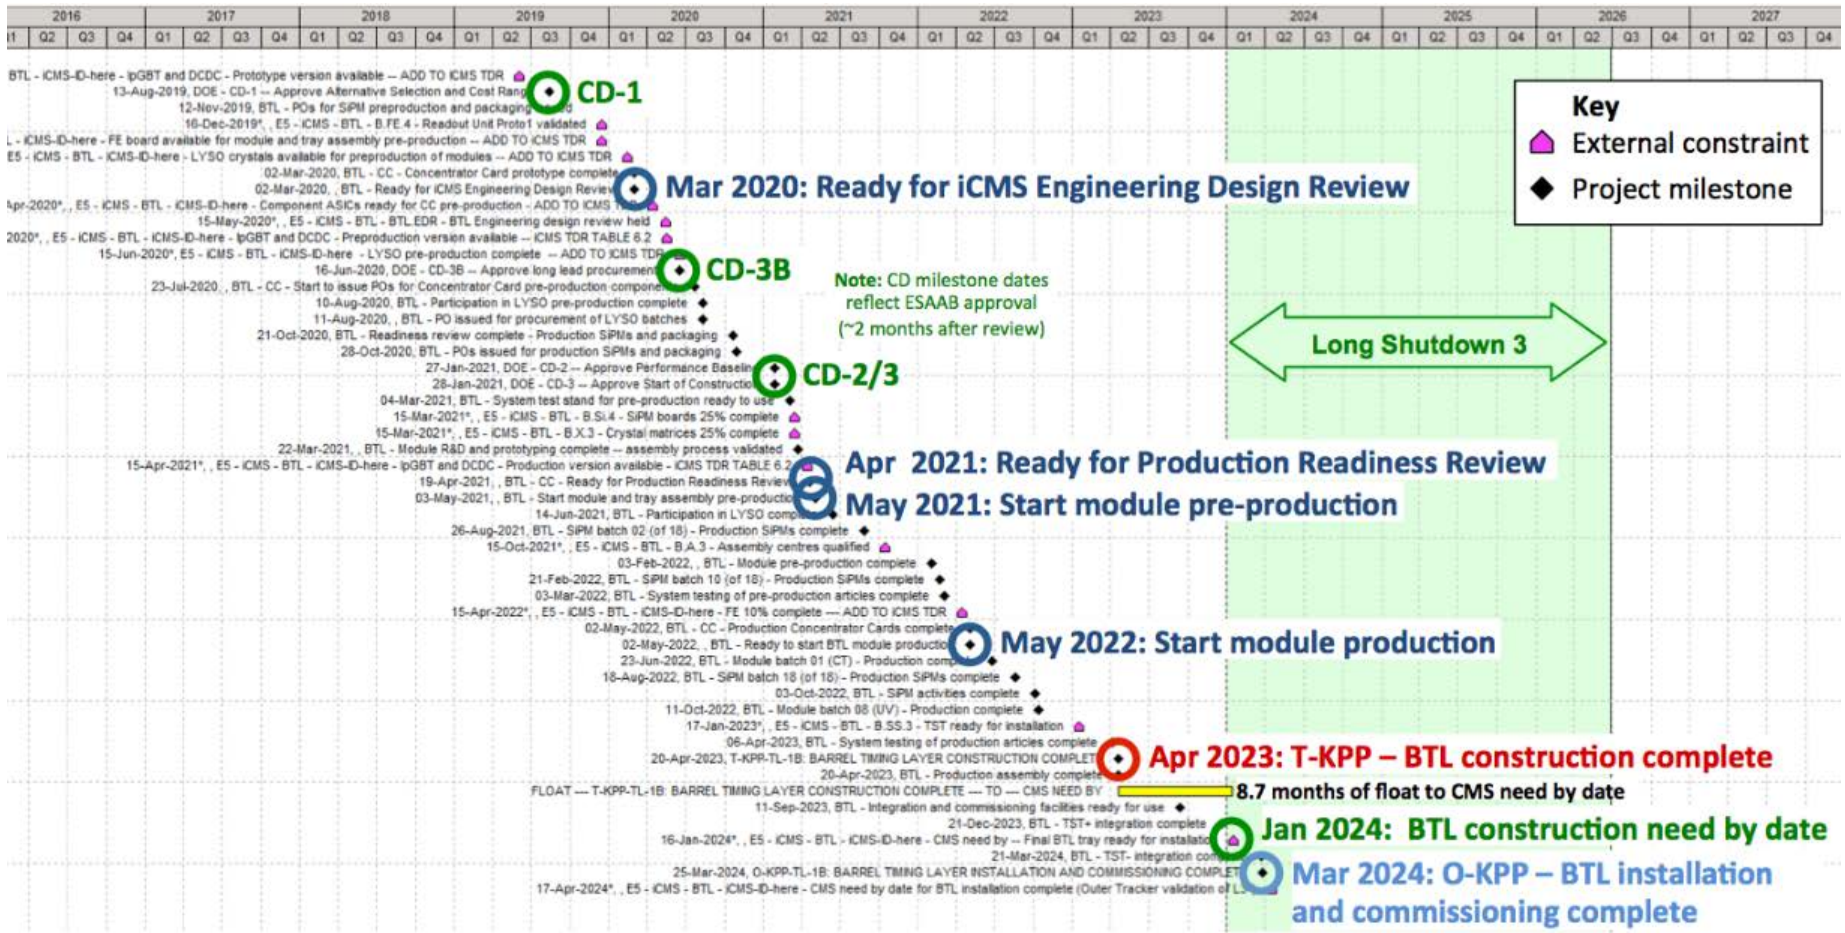

Leading Cost Drivers (M&S + Labor)

CMS Driver	Labor (FTE-yrs)	Labor (M\$)	M&S (M\$)	Labor + M&S (M\$)	Estimate Uncertainty (M\$)	Total (M\$)

BTL Key Milestones

Threshold KPP: BTL module and tray construction is de-coupled from LHC schedule
Objective KPP: Participation in integration and commissioning with iCMS at CERN

ETL Key Milestones

Threshold KPP:
Objective KPP:

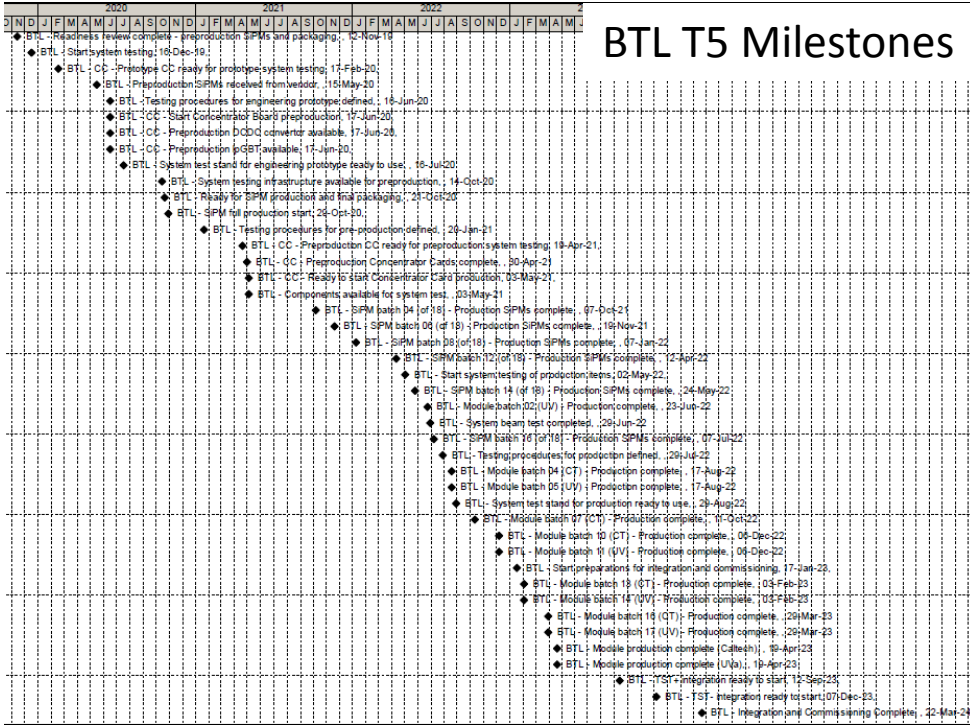

ETL construction is de-coupled from LHC schedule

Participation in integration and commissioning with iCMS at CERN

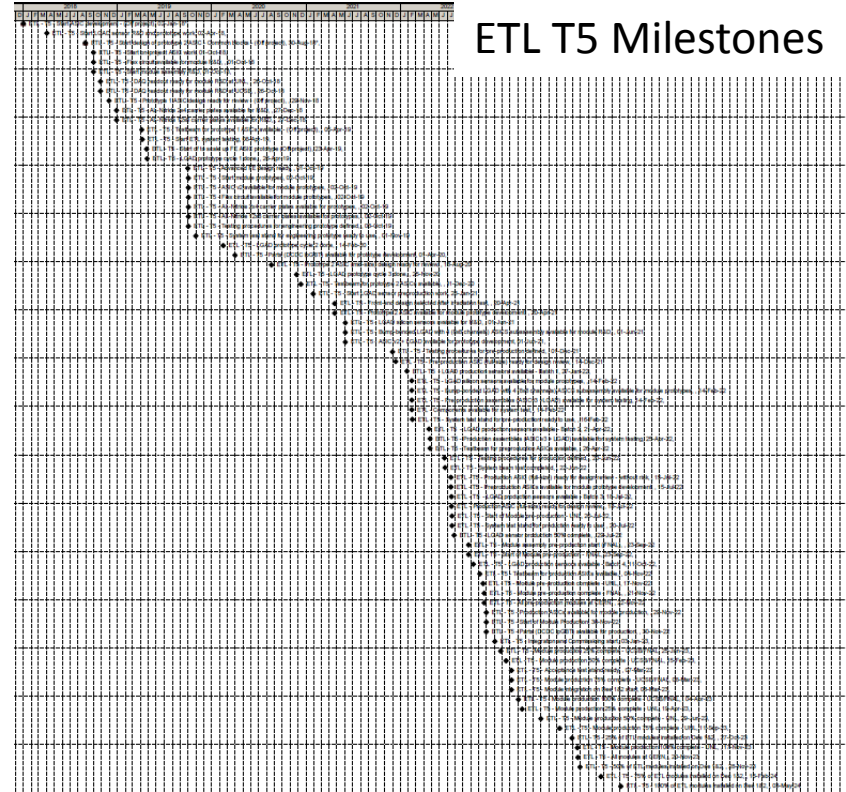

Milestones to Monitor Progress (Tier 5)

We have additional milestones throughout the MTD project to monitor technical progress, Tier 5 milestones are monitored by subproject manager

BTL T5 Milestones

ETL T5 Milestones

Complete list of milestones are listed in the Milestone Dictionary (CMS-doc-13321)

Synchronization with MTD Schedule

International milestones and need by dates are tabulated in the TDR and included in the US schedule logic to ensure we are aligned with the MTD schedule

The US deliverables precede the CMS request-by-dates with sufficient float

We also have a watch list of external deliverables with people assigned to monitor progress

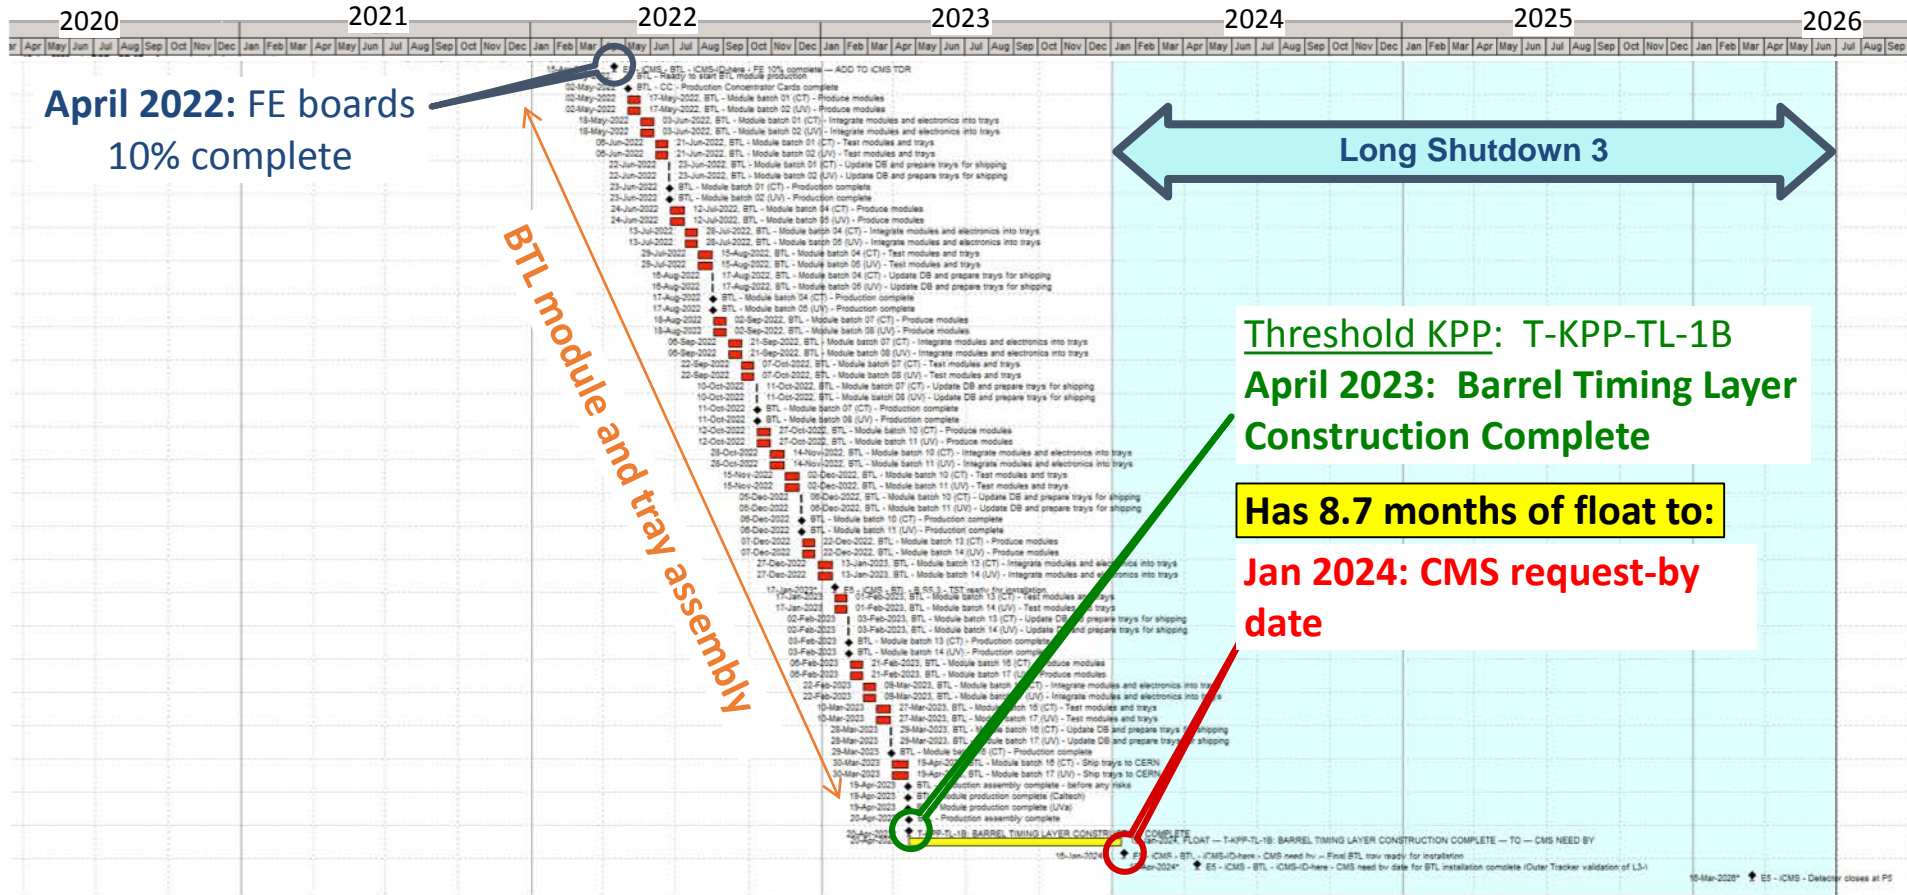

IpGBT, DC/DC converter, TOFHIR

Expected delivery dates are included in the schedule and drive some activities

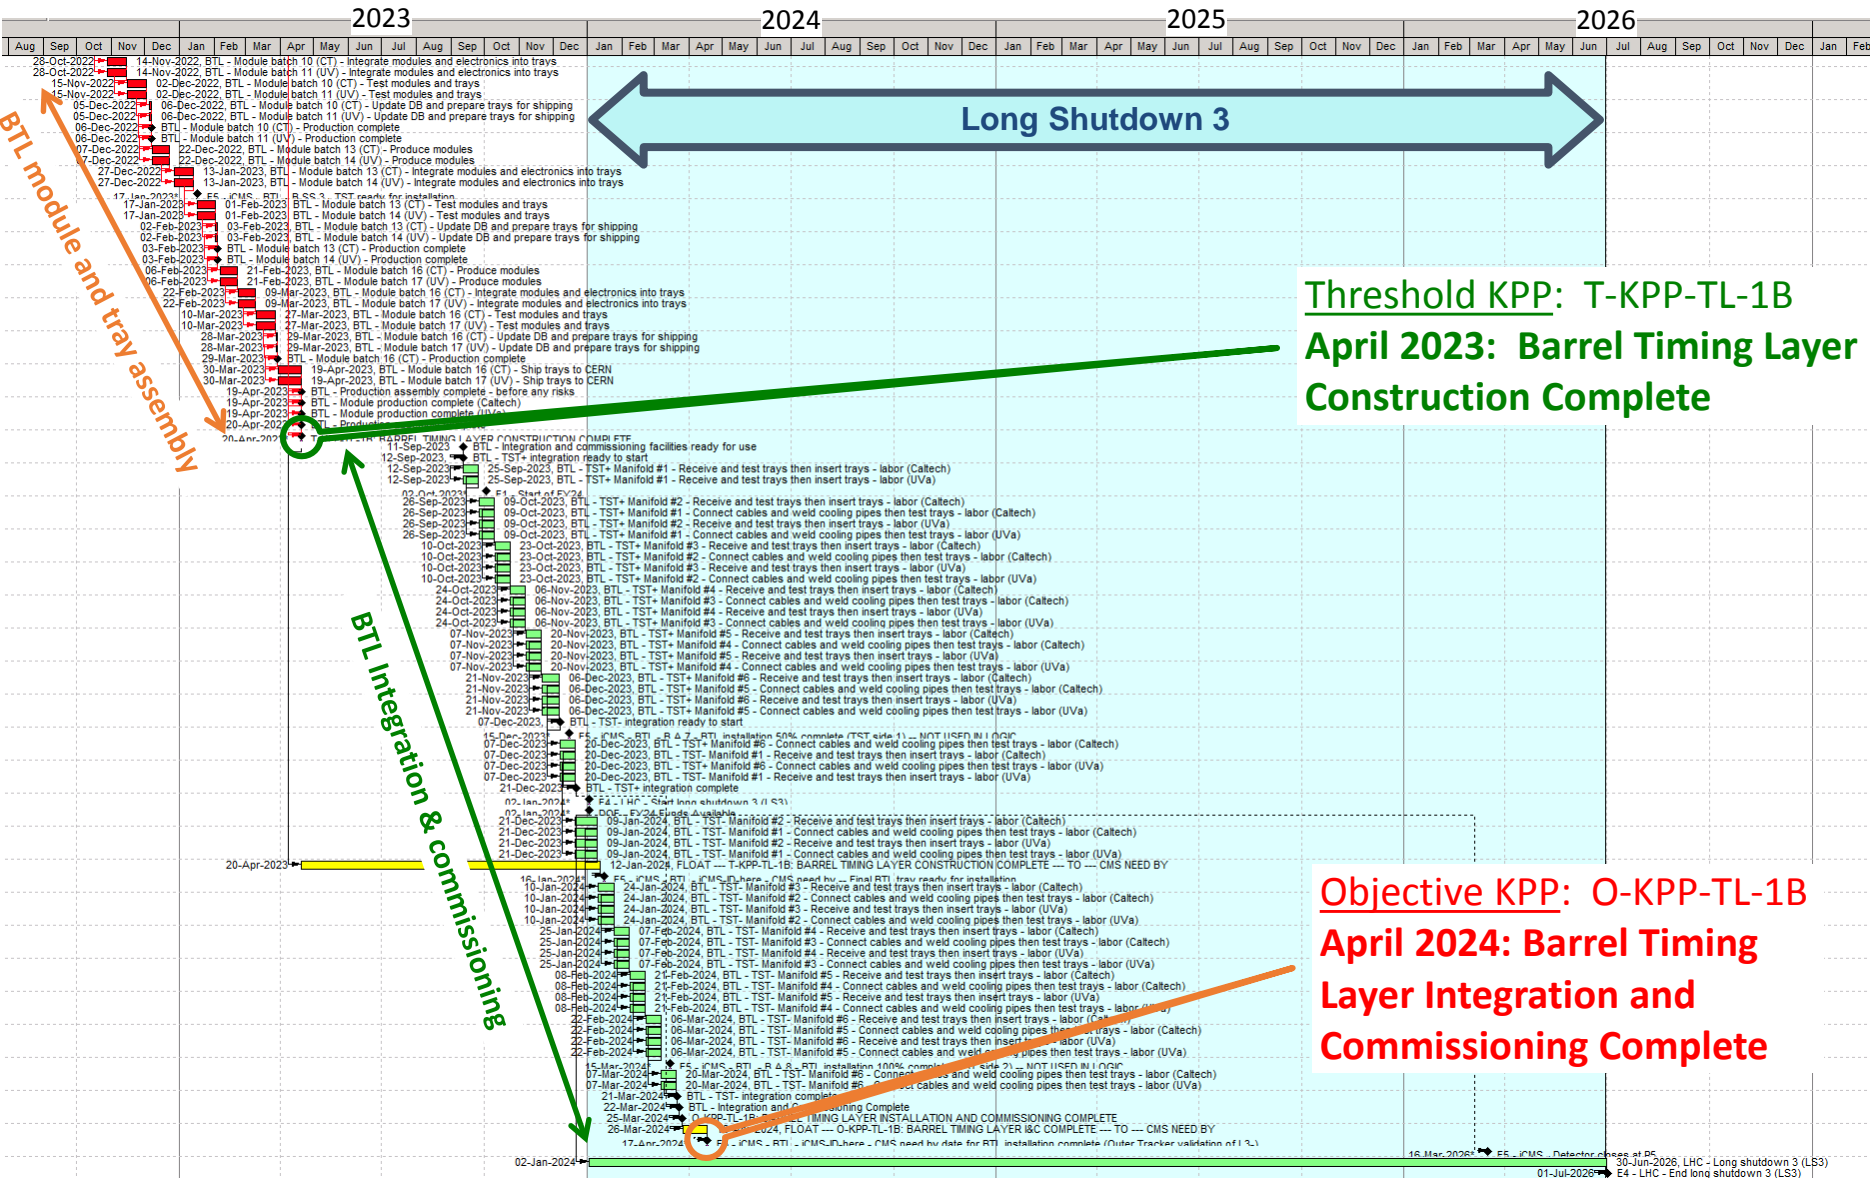

We are directly involved in developing the international MTD schedule and fully synchronized with international MTD planning

BTL Critical Path and Schedule Contingency

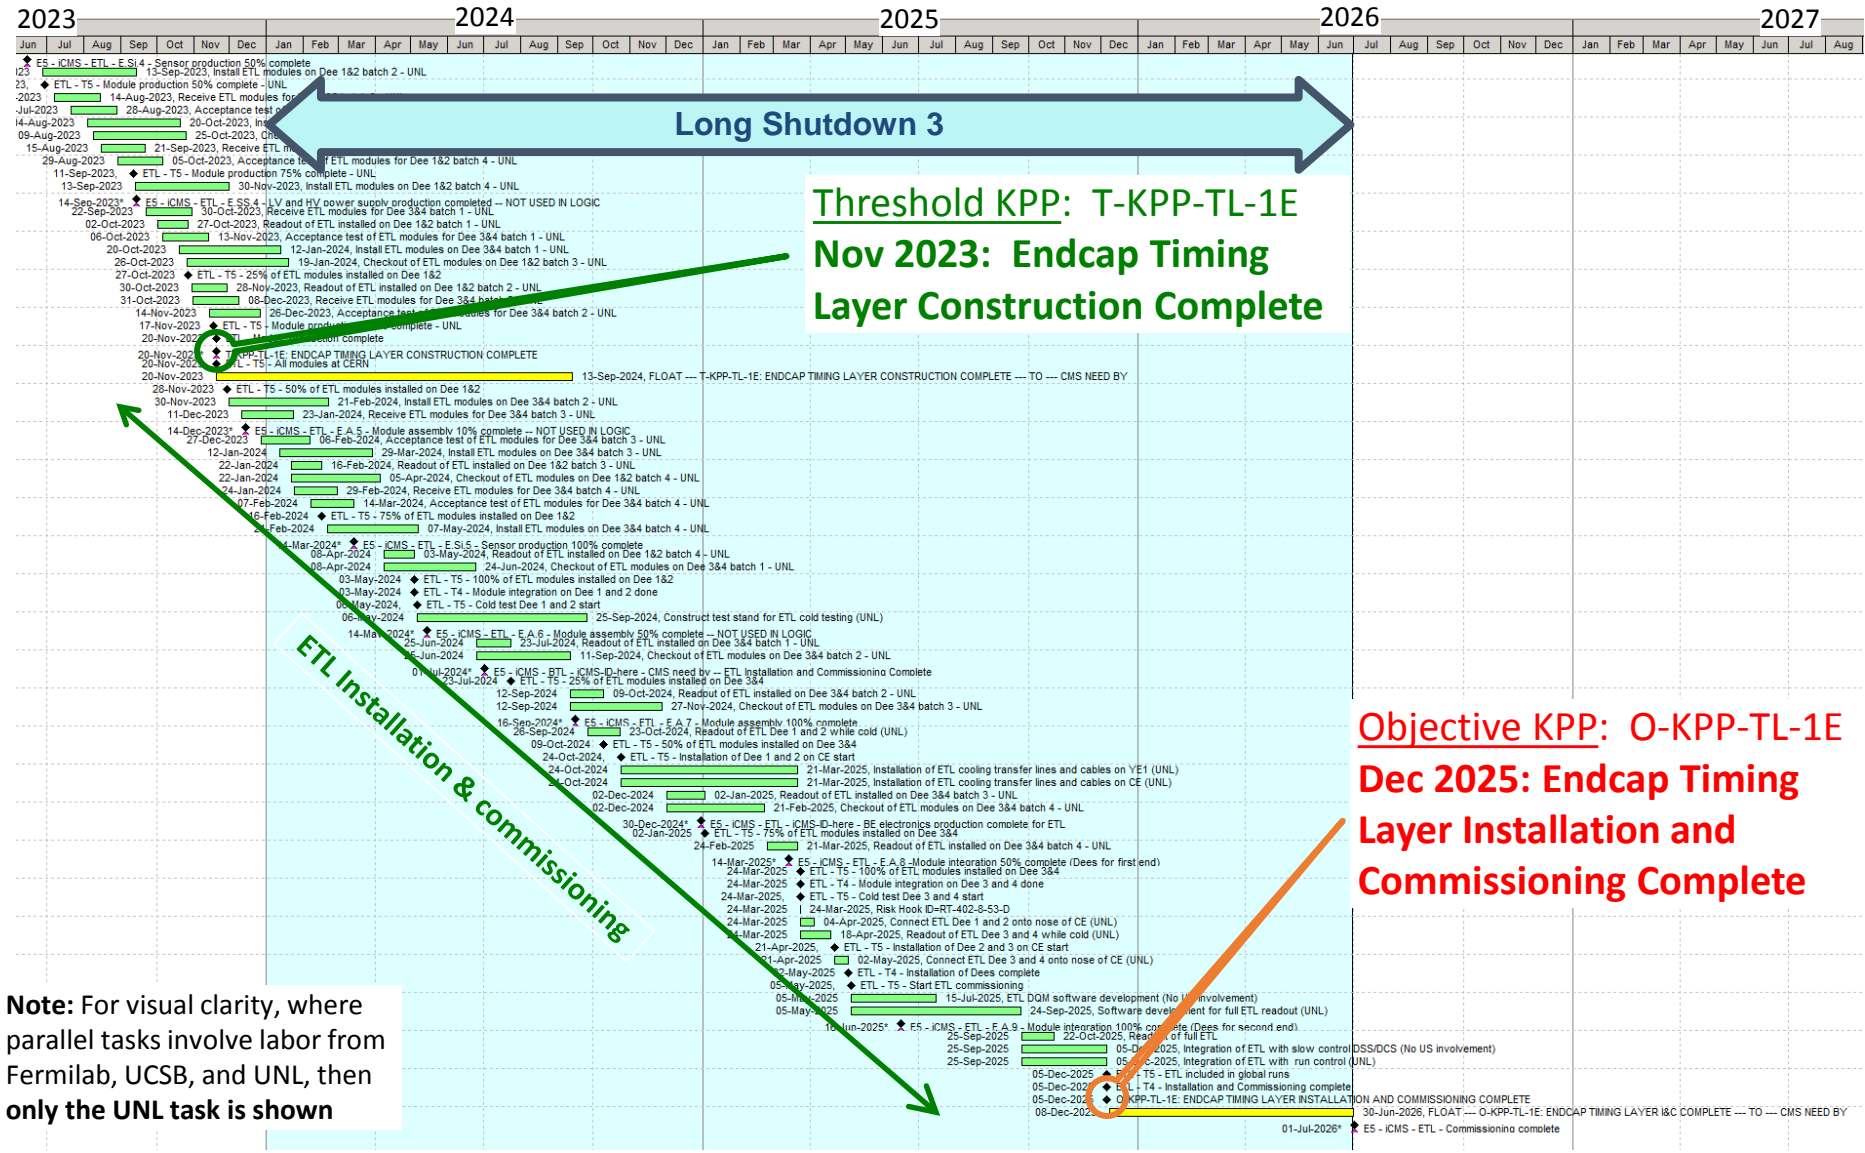

BTL Installation and Commissioning

ETL Installation and Commissioning

Note: For visual clarity, where parallel tasks involve labor from Fermilab, UCSB, and UNL, then **only the UNL task is shown**

**Threshold KPP: T-KPP-TL-1E
Nov 2023: Endcap Timing
Layer Construction Complete**

**Objective KPP: O-KPP-TL-1E
Dec 2025: Endcap Timing
Layer Installation and
Commissioning Complete**

P6 Schedule Adjustments for IPR

- We are following a staged approach for the schedule development:
 1. US activities entered into P6 to produce our technically driven schedule.
DONE and frozen for this review
 2. International schedule formalized for the LHCC/UCG Step 2 approval.
Being done now
 3. Complete set of international project / external tie points entered into P6.
Many already implemented
 4. Recommendations from OPSS review and the DR implemented.
Majority of OPSS recommendations already in place

- We've started to implement the following changes in the P6 sandbox
 - Implement bump bonding external tie point
 - Implement UNL external constraint and optimize UNL/FNAL workload sharing

- We expect to complete stages 3 and 4 listed above and freeze the schedule for the June 2019 IPR by end of April

Risks

BTL Risk Workshop: Nov 7, 2018: <https://indico.fnal.gov/event/19025/>

ETL Risk Workshop: Nov 8, 2018: <https://indico.fnal.gov/event/19026/>

Panel of external reviewers found that we have a comprehensive list of risks
 Provided feedback on: *consolidating risks, improving impact estimates, improving descriptive text, fixing missing risk register field entries*

Risk impact on the cost has been included in the total project cost
 Risks have now been included in the P6 schedule to get a better understanding of the schedule impact

A detailed description of the methodology used for the risk analysis can be found in CMS-DocDB-13481

General Risks (3)

WBS / Ops Lab Activity : 402.8 TL - Timing Layer (general risks) (3)

			Probability	Cost impact	Schedule impact	P*impact (k\$)
Risk Type : Threat (3)

Timing Layer Risks

CMS-doc-13480

RT-402-8-01-D ETL - Additional FE ASIC prototype cycle is required

Risk Rank:	3 (High) Scores: Probability : 4 (H) ; Cost: 2 (M) Schedule: 2 (M))	Risk Status:	Open
Summary:	<p>This risk can have multiple causes.</p> <p>1) If the necessary performance (precision vs power consumption) is not achieved during the last prototype cycle, an additional prototype cycle may be necessary causing a delay and incurring a cost increase.</p> <p>2) ASIC specification has changed due to external reasons, such as lpGBT clock distribtution does not meet specifications.</p>		
Risk Type:	Threat	Owner:	Tiehui Liu
WBS:	402.8.4 ETL - Endcap Timing Layer	Risk Area:	Technical Risk / Reliability or Performance
Probability (P):	50%	Technical Impact:	0 (N) - negligible technical impact
Cost Impact:	PDF = 3-point - triangular Minimum = 500 k\$ Most likely = 600 k\$ Maximum = 700 k\$ Mean = 600 k\$ P * <Impact> = 300 k\$	Schedule Impact:	PDF = 3-point - triangular Minimum = 4 months Most likely = 5 months Maximum = 6 months Mean = 5 months P * <Impact> = 2.5 months
Basis of Estimate:	The cost for a MPW run is 400k, and we include 100-300k for additional engineering.		
Cause or Trigger:	Prototype 2 does not meet requirements and we cannot include changes in the preproduction submission.	Impacted Activities:	Risk could delay completion of ASIC prototyping
Start date:	1/Mar/2020	End date:	1/Jan/2022
Risk Mitigations:	We have increased the effort for the design simulation and verification.		
Risk Responses:	We include an additional prototype cycle.		
More details:			

Timing Layer risks

■ TL risk contingency ≈ **\$1.27M** = \$1.43M threats – \$0.16M opportunities

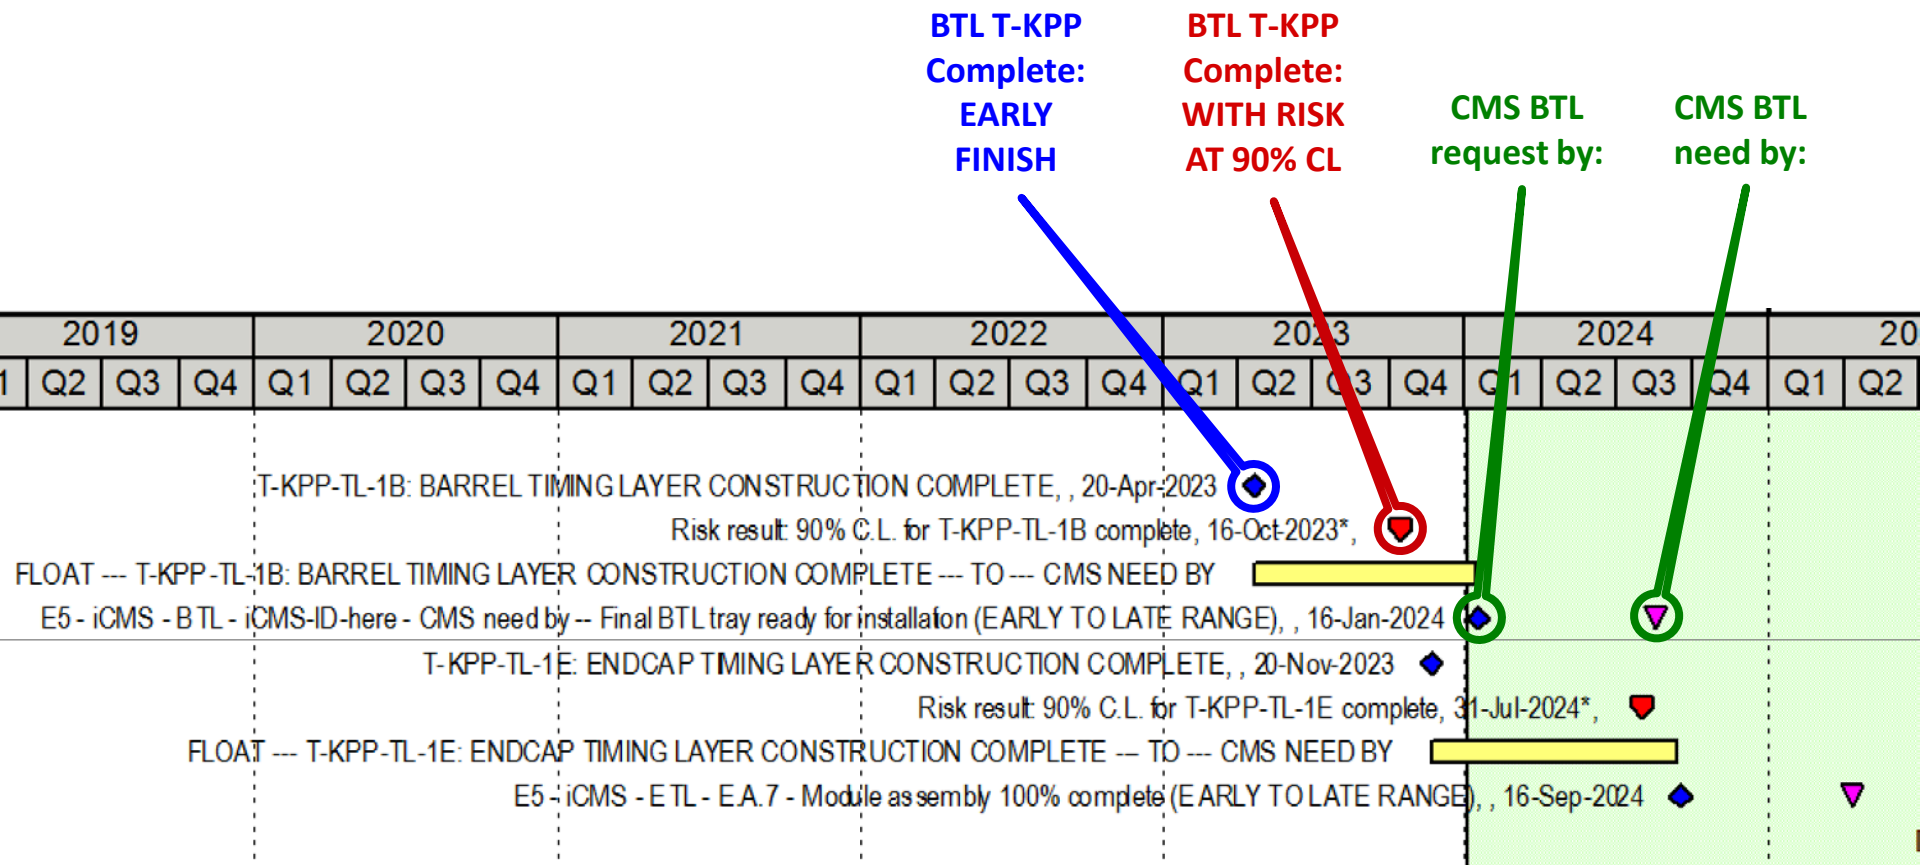

Risk Contingency (k\$)

= Total contingency at 90% C.L. shared amongst risks pro-rata with (Probability * Cost Impact)

Threshold KPPs – Schedule contingency

We have sufficient float in our schedule to accommodate the impact of our risks (at 90% CL)

Summary

The US scope is well defined and we now have a detailed schedule in P6 that has well motivated cost and labor estimates that are documented in the BOEs

The detailed resource loaded schedule has been reviewed by OPSS in Jan/Feb 2019 and we have addressed most of the feedback

We are working closely with international MTD to ensure planning is synchronized and have sufficient milestones in the P6 schedule to monitor progress

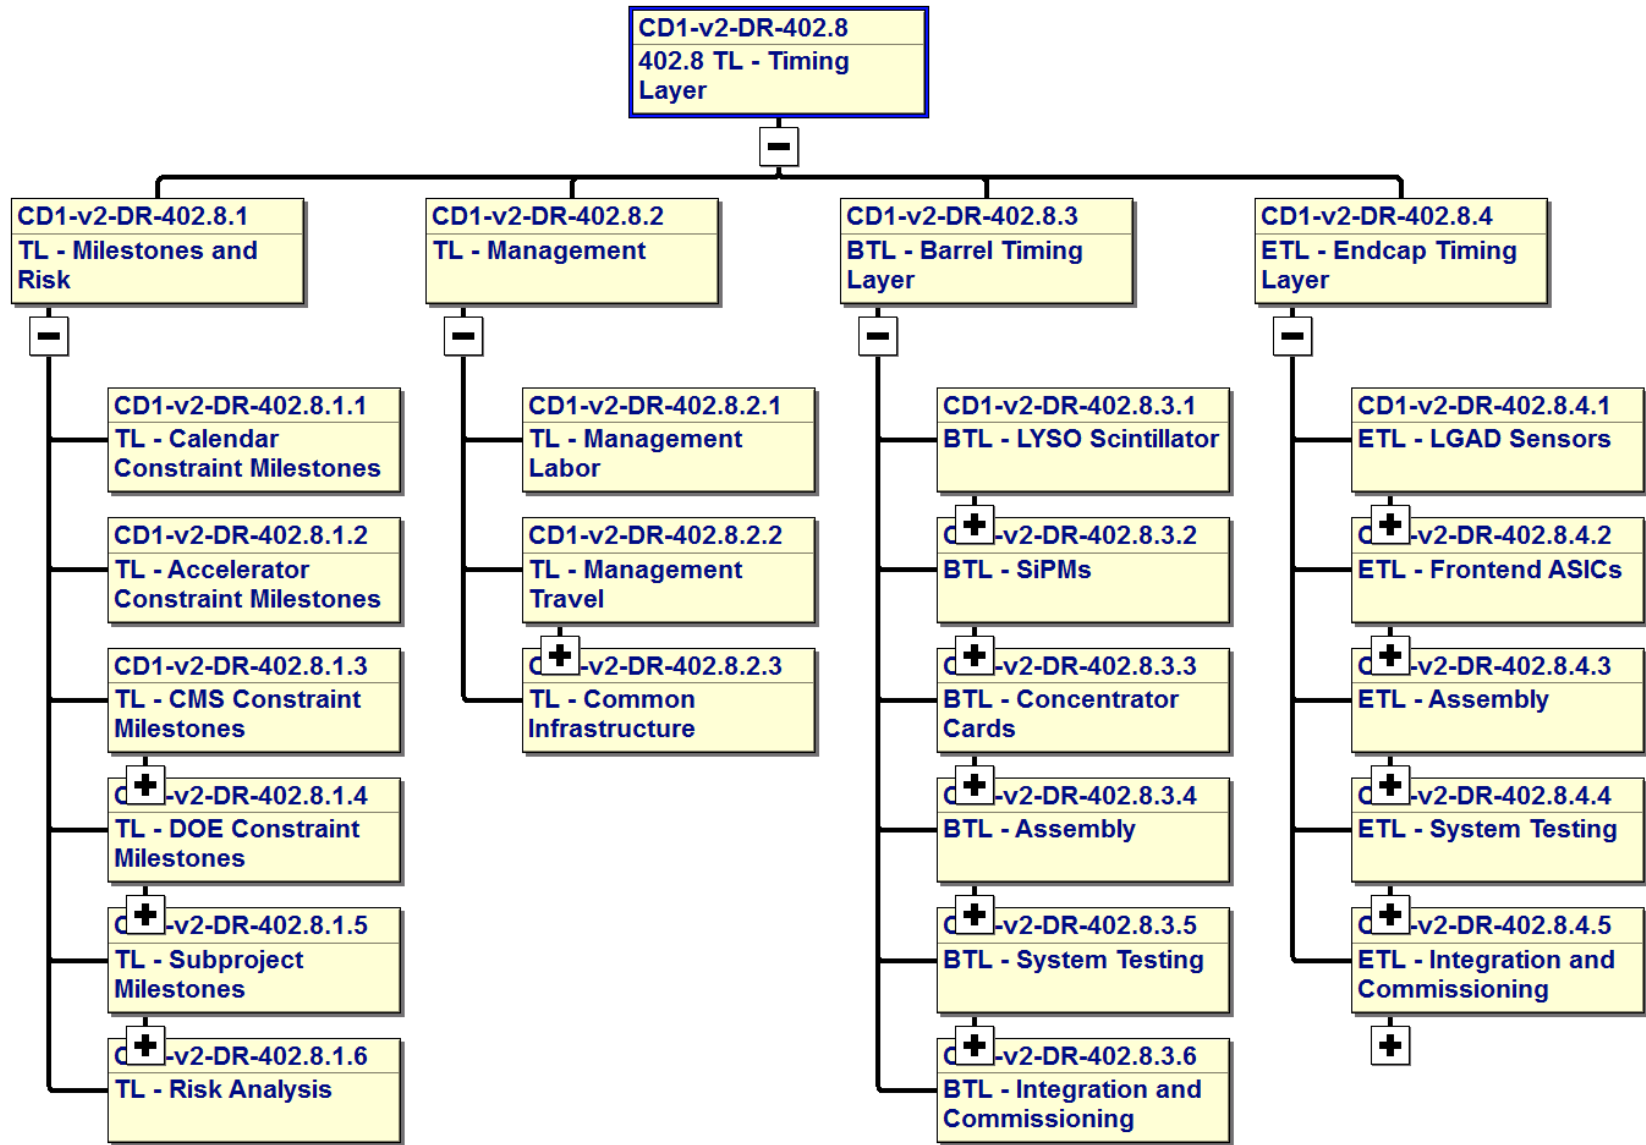

Risks have been identified and reviewed and are now linked in the schedule allowing us to better estimate the schedule impact

Some adjustments to the schedule will be implemented prior to the IPR review, we do not expect they will have a significant impact on the cost and schedule

We have made significant progress with the MTD schedule allowing us to: develop an accurate cost estimate using recent vendor quotes and institution specific labor rates which includes cost escalation, determine the critical path, full MC risk analysis, and we are synchronizing with international MTD planning

Risk Register CMS-doc-13480

■ High and medium-rank Timing Layer risks

Risk Rank	RI-ID	Title	Probability	Schedule Impact	Cost Impact	P * Impact (k\$)
▣ Risk Rank : 3 (High) (1)						
▣ Risk Type : Threat (1)						
3 (High)	RT-402-8-01-D	ETL - Additional FE ASIC prototype cycle is required	50 %	4 -- 5 -- 6 months	500 -- 600 -- 700 k\$	300
▣ Risk Rank : 2 (Medium) (12)						
▣ Risk Type : Opportunity (1)						
2 (Medium)	RO-402-8-01-D	ETL - Use AltiROC	10 %	-8 months	-760 k\$	-76
▣ Risk Type : Threat (11)						
2 (Medium)	RT-402-8-03-D	ETL - FE ASIC does not meet specs - needs another pre-prod run	10 %	6 -- 7.5 -- 9 months	914 -- 970 -- 1026 k\$	97
2 (Medium)	RT-402-8-05-D	BTL - Change in interfaces of tray assembly components	20 %	3 months	150 -- 250 -- 350 k\$	50
2 (Medium)	RT-402-8-33-D	BTL - Difficulties procuring LYSO from international suppliers	10 %	3 -- 6 -- 9 months	200 -- 450 -- 700 k\$	45
2 (Medium)	RT-402-8-91-D	TL - Shortfall in Timing Layer scientific labor	30 %	0 months	0 -- 0 -- 421 k\$	42
2 (Medium)	RT-402-8-90-D	TL - Key Timing Layer personnel need to be replaced	25 %	0 -- 0 -- 3 months	45 -- 135 -- 261 k\$	37
2 (Medium)	RT-402-8-14-D	BTL - Problems with SiPM vendor	20 %	2 -- 6 -- 8 months	32 -- 96 -- 128 k\$	17
2 (Medium)	RT-402-8-02-D	ETL - Problems with ETL module assembly facility	50 %	1 months	30 k\$	15
2 (Medium)	RT-402-8-10-D	ETL - Sensor quality problem during production	15 %	2 -- 3 -- 6 months	28 -- 52 -- 109 k\$	9
2 (Medium)	RT-402-8-30-D	BTL - Concentrator Card requires significant design changes	10 %	1 -- 3 -- 6 months	1 -- 50 -- 100 k\$	5
2 (Medium)	RT-402-8-43-D	TL - System Testing - components late for system test	30 %	4 months	0 -- 10 -- 20 k\$	3
2 (Medium)	RT-402-8-07-D	BTL - Concentrator Card delay in external component deliveries	20 %	1 -- 3 -- 6 months	0 k\$	0
▣ Risk Rank : 1 (Low) (17)						

Barrel Timing Layer risks

▪ BTL risk contingency ≈ \$0.35

Risk Contingency (k\$)

= Total contingency at 90% C.L. shared amongst risks pro-rata with (Probability * Cost Impact)

Endcap Timing Layer risks

▪ **ETL risk contingency ≈ \$0.76M** = \$0.92M threats – \$0.16M opportunities

Risk Contingency (k\$)

= Total contingency at 90% C.L. shared amongst risks pro-rata with (Probability * Cost Impact)

Risk cost contingency by L2 area

	Base cost	Risk contingency (90% CL)	
	(M\$)	(M\$)	(% of base)
402.1 Project Management	18.13	5.65	31.2%
402.2 Outer Tracker	42.03	1.06	2.5%
402.4 Calorimeter Endcap	39.90	1.93	4.8%
402.6 Trigger and DAQ	8.92	0.74	8.3%
402.8 Timing Layer	11.36	1.27	11.2%
Total	120.34	10.64	8.8%

OT fraction ~6% for threats only
(i.e. if without opportunities)

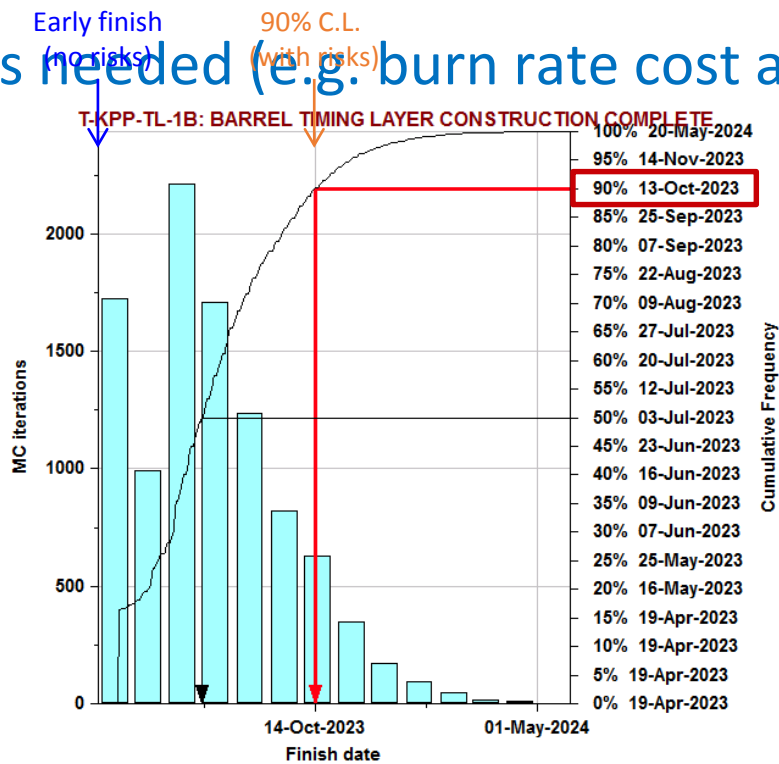

Threshold KPP finish date at 90% C.L.

- MC models the stochastic schedule impacts of **all** risks
 - Project-wide risks and L2-specific technical risks (H/M/L rank)
 - Risk events are inserted into the P6 logic where they could occur
 - Include correlations as needed (e.g. burn rate cost and risk delay)

BTL Construction complete

Schedule has **8.7 months** of float to the CMS need-by date

Risks will delay T-KPP by **< 5.8 months** (at 90% C.L.)

Analysis	
Iterations:	10000
Statistics	
Minimum:	19-Apr-2023
Maximum:	20-May-2024
Mean:	12-Jul-2023
Bar Width:	month
Highlighters	
50%	03-Jul-2023
90%	13-Oct-2023

Threshold KPP finish date at 90% C.L.

- MC models the stochastic schedule impacts of **all** risks
 - Project-wide risks and L2-specific technical risks (H/M/L rank)
 - Risk events are inserted into the P6 logic where they could occur
 - Include correlations as needed (e.g. burn rate cost and risk delay)

ETL Construction complete

Schedule has **9.8 months** of float to the CMS need-by date

Risks will delay T-KPP by **< 8.3 months** (at 90% C.L.)
