

Database update

- The SAM – RDB Runs history DB interface is done.
 - Will test as soon as NOvA meeting is over.
- Request for addition of two variables to be added to the runs history RDB
 - RCE: “duration”
 - FELIX: “trigger_matching_window_ticks”
 - Will add these to ucondb -> runs history application next week (use this to train new student starting on DB work)
- There has been some discussion as to whether or not the DB group should be asked to manipulate the parameters at all top get them into a more “user-friendly” form
 - DB group would prefer to leave parameters as found
- Had discussion about Hardware DB solutions going forward
 - Plan is to proceed as was done for protoDUNE with understanding solution may need to be altered based on decisions beyond our control
