

# DUNE Production

Ken Herner, Ivan Furic

25 March 2019

# Recent efforts

- Continuing to work on outstanding MC requests (most single particle, ProtoDUNE SP, and ProtoDUNE DP samples)
  - DP detsim jobs require 5-6 GB of memory (and for only 50 evts)
- Catching up on recent cosmic reprocessing; still some 7.5 ms run files to finish (even 4 days not long enough for 1 file in some cases)
  - Probably need to split each file into multiple jobs
- Continuing to integrate new sites
  - Welcome to CIEMAT, PIC, NIKHEF (now able to run all types of jobs)
  - StashCache now working at more sites
