

FAST/IOTA Collaboration Meeting and Workshop on High Intensity Beams in Rings

Monday, June 10, 2019 - Wednesday, June 12, 2019

Fermilab

Book of Abstracts

Contents

Group Photo	1
Reception	1
Break	1
Introduction	1
IOTA/FAST Status, First Run and Outlook	1
Proposing an Experiment at IOTA/FAST	1
Making IOTA/FAST Experiments Happen: Technical Requirements and Resources	1
Fermilab Complex Beam Physics Challenges	2
Scenarios and Challenges of Fermilab Power Upgrade	2
IOTA Commissioning	2
IOTA Instrumentation	2
FAST Linac Operation and Capabilities	2
IOTA Nonlinear Integrable Optics Experiment with Octupoles	2
IOTA Nonlinear Integrable Optics Experiment: Landau Damping	2
IOTA Nonlinear Integrable Optics Experiment: NL Magnet	3
IOTA Experiment: Single-Electron Tomography	3
IOTA Experiment: Undulator Radiation Fluctuations	3
Fermilab Booster Studies	3
Booster Simulations with MADS-SC	3
Optical Stochastic Cooling: Status and First Experiments	3
FAST Magnetized Beam Experiment	4
FAST CryoModule HOM Measurement	4
IOTA Electron Lens: Status and Plans	4

Status of the IOTA Electron Lens Design	4
PIC Simulation of Pioneering Electron Lens Space Charge Compensation	4
Observations of Short-Range Wakefield Effects in TESLA-type SCRF Cavities	4
Global geometry of integrable dynamics in IOTA with applications to dynamic aperture	5
Simulation of intense beams with exascale ready Vorpal	5
A study of beam equilibria in strongly nonlinear focusing channels with applications to IOTA	5
Proposal on nonlinear lattice measurements in IOTA	5
Measuring Nonlinear Decoherence in IOTA	5
Quantum Computing on crystalline beams of ions: the concept and proof-of-principle experiments at IOTA	5
Opportunities for Crystal Acceleration Research at FAST	6
Machine Learning Experiments for Storage Rings at FAST	6
Some Quantum Mechanical Questions about Optical Stochastic Cooling	6
Useful Information for Users & Visitors	6
Welcome and Information	6

Introduction

Corresponding Author: nsergei@fnal.gov

9

IOTA/FAST Status, First Run and Outlook

Corresponding Author: valishev@fnal.gov

10

Proposing an Experiment at IOTA/FAST

Corresponding Author: stancari@fnal.gov

11

Making IOTA/FAST Experiments Happen: Technical Requirements and Resources

Corresponding Author: broemmel@fnal.gov

12

Fermilab Complex Beam Physics Challenges

Corresponding Author: rainswor@fnal.gov

13

Scenarios and Challenges of Fermilab Power Upgrade

Corresponding Author: jseldred@fnal.gov

14

IOTA Commissioning

Corresponding Author: aromanov@fnal.gov

15

IOTA Instrumentation

Corresponding Author: nkuklev@fnal.gov

16

FAST Linac Operation and Capabilities

Corresponding Author: broemmel@fnal.gov

17

IOTA Nonlinear Integrable Optics Experiment with Octupoles

Corresponding Author: nkuklev@fnal.gov

18

IOTA Nonlinear Integrable Optics Experiment: Landau Damping

Corresponding Author: eddy@fnal.gov

19

IOTA Nonlinear Integrable Optics Experiment: NL Magnet

Corresponding Authors: sszustkowski@niu.edu, sszustko@fnal.gov

20

IOTA Experiment: Single-Electron Tomography

Corresponding Author: aromanov@fnal.gov

21

IOTA Experiment: Undulator Radiation Fluctuations

Corresponding Authors: ilobach@uchicago.edu, ilobach@fnal.gov

22

Fermilab Booster Studies

Corresponding Author: jseldred@fnal.gov

23

Booster Simulations with MADS-SC

Corresponding Author: alexahin@fnal.gov

24

Optical Stochastic Cooling: Status and First Experiments

Corresponding Author: jjarvis@fnal.gov

25

FAST Magnetized Beam Experiment

Corresponding Authors: piot@nicadd.niu.edu, piot@fnal.gov

26

FAST CryoModule HOM Measurement

Corresponding Author: broemmel@fnal.gov

27

IOTA Electron Lens: Status and Plans

Corresponding Author: stancari@fnal.gov

28

Status of the IOTA Electron Lens Design

29

PIC Simulation of Pioneering Electron Lens Space Charge Compensation

Corresponding Author: egstern@fnal.gov

30

Observations of Short-Range Wakefield Effects in TESLA-type SCRF Cavities

Corresponding Author: lumpkin@fnal.gov

31

Global geometry of integrable dynamics in IOTA with applications to dynamic aperture

Corresponding Author: chadmitchell@lbl.gov

32

Simulation of intense beams with exascale ready Vorpal

Corresponding Author: cary@colorado.edu

33

A study of beam equilibria in strongly nonlinear focusing channels with applications to IOTA

Corresponding Author: chadmitchell@lbl.gov

34

Proposal on nonlinear lattice measurements in IOTA

Corresponding Author: michael.hofer@cern.ch

35

Measuring Nonlinear Decoherence in IOTA

Corresponding Author: chall@radiasoft.net

36

Quantum Computing on crystalline beams of ions: the concept and proof-of-principle experiments at IOTA

Corresponding Author: murokh@radiabeam.com

37

Opportunities for Crystal Acceleration Research at FAST

Corresponding Author: shiltsev@fnal.gov

38

Machine Learning Experiments for Storage Rings at FAST

Corresponding Author: swebb@radiasoft.net

39

Some Quantum Mechanical Questions about Optical Stochastic Cooling

40

Useful Information for Users & Visitors

41

Welcome and Information
