

ProtoDUNE TPC data:
FEMB 302 timing correction

ProtoDUNE sim/reco

David Adams

BNL

March 27, 2019

Introduction

FEMB 302 does not receive the timing clock signal

- All other FEMBs use this signal to synchronize their TPC clocks
- Event displays clearly show FEMB 302 is off by a few ticks
 - If uncorrected
 - No evidence of problems for any other FEMBs

Correction introduced last December

- Tool `pdsp_timingMitigate`, class `AdcTimingMitigator`
- Two params: relative clock rate and a tick offset
- Corrected value is linear interpolation using the surrounding values from a scaled, offset tick counter
- Params were set looking a few event displays in December
 - Rate factor 0.9995, offset 3 ticks
- Last week showed more accurate and precise measurement of rate factor using pulser data: 0.99927...

Tuning the timing correction

Here try to tune the timing correction

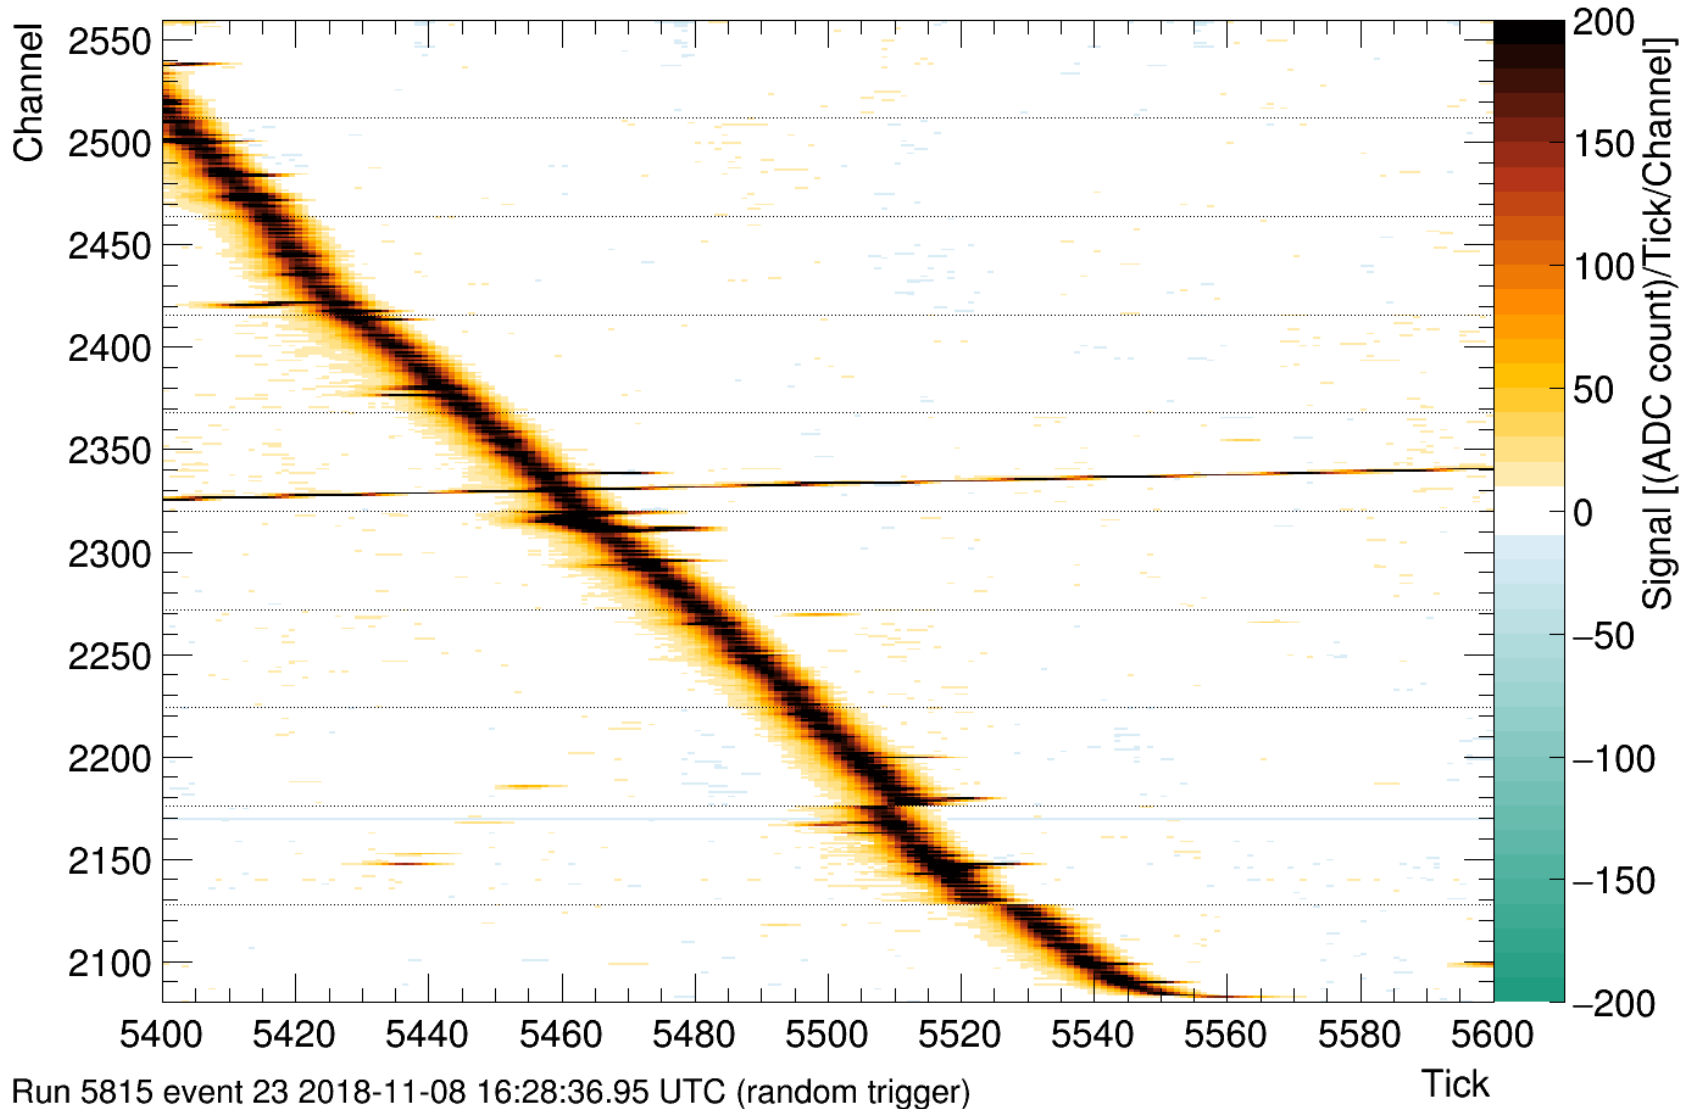

- Use the rate factor from the pulser measurement: 0.9993
- See if we can find a pulser offset that works across the tick range
 - I.e. from 0 to 6000 ticks
 - Revisit this if we start taking data with a much longer window
 - (as we should)
- Following plots show displays for many events varying params
 - I picked out tracks nearly parallel to the wire planes
 - Many plots. I did not want to only show those giving a consistent (and thus biased) result

Start with events from run 5815

Event 23 z5400-5600

1.0, 0 (no correction)

Mitigated ADC for run 5815 event 23 TPC plane 0z (APA 3: US-RaS) Random trigger

0.9995, 3 (Dec 2018 correction)

Mitigated ADC for run 5815 event 23 TPC plane 0z (APA 3: US-RaS) Random trigger

0.9993, 3

Mitigated ADC for run 5815 event 23 TPC plane 0z (APA 3: US-RaS) Random trigger

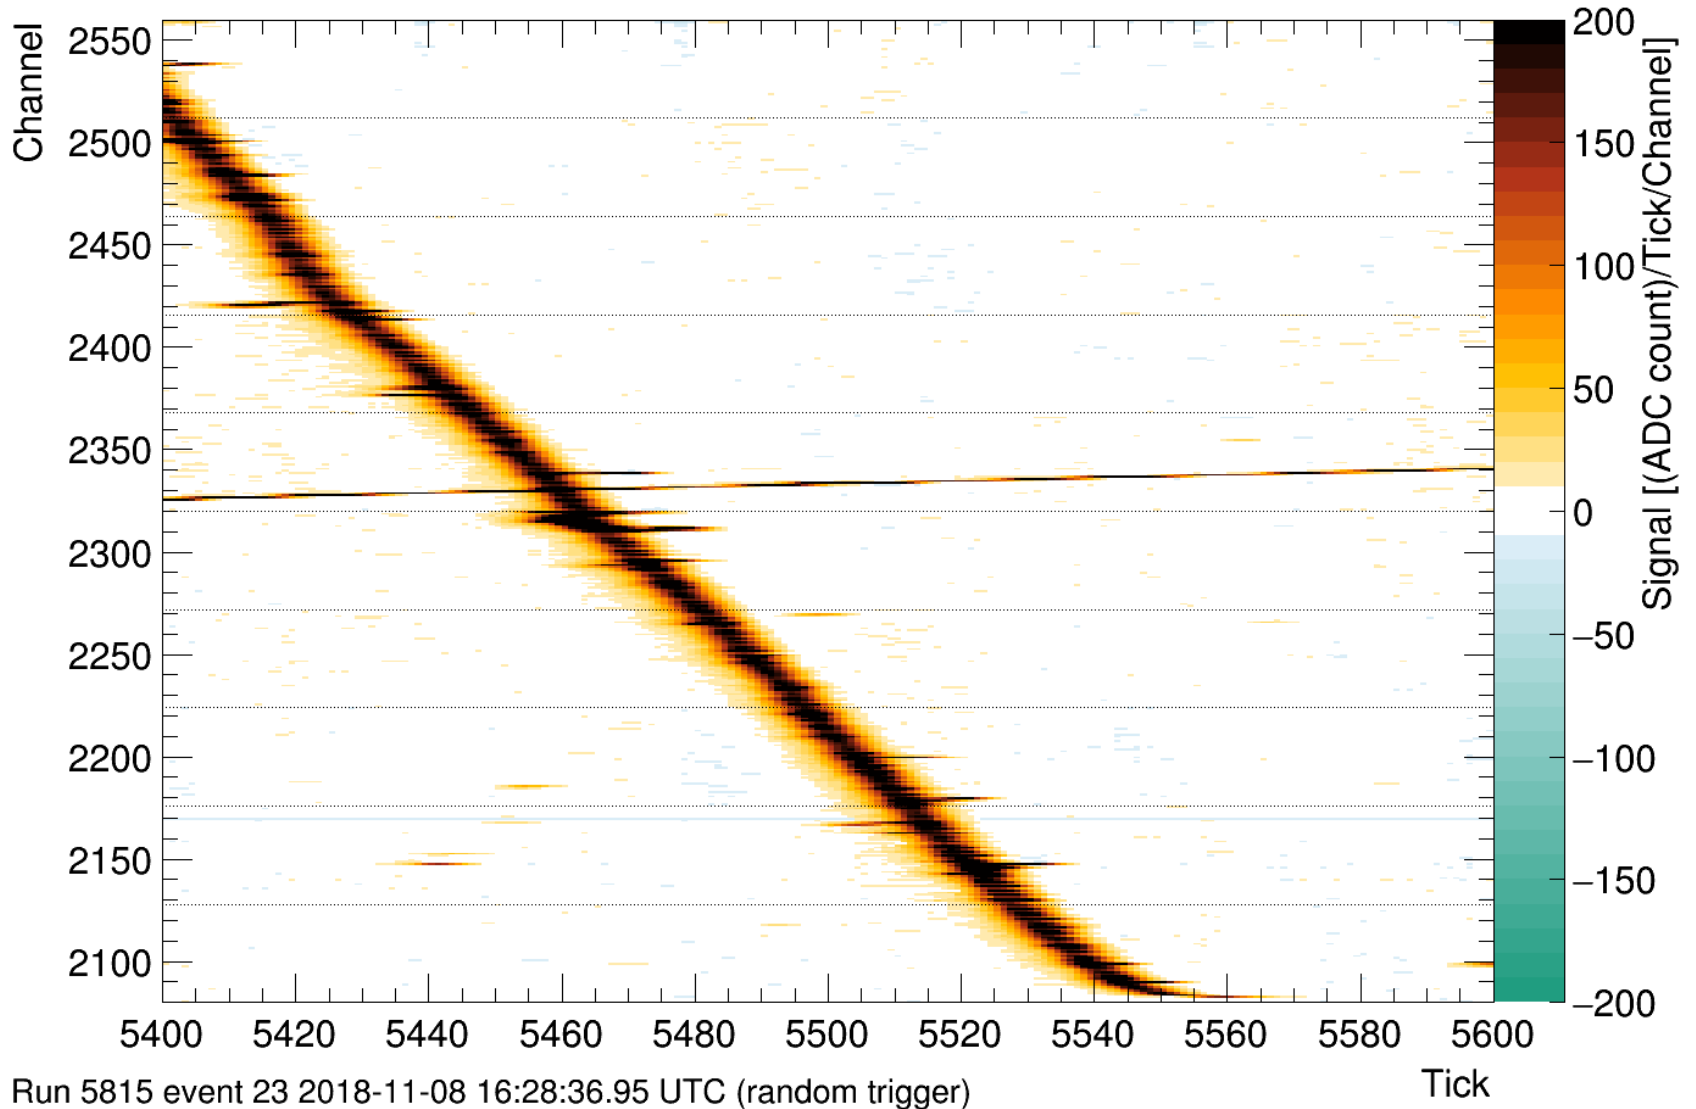

0.9993, 2

Mitigated ADC for run 5815 event 23 TPC plane 0z (APA 3: US-RaS) Random trigger

0.9993, 1

Mitigated ADC for run 5815 event 23 TPC plane 0z (APA 3: US-RaS) Random trigger

0.9993, 0

Mitigated ADC for run 5815 event 23 TPC plane 0z (APA 3: US-RaS) Random trigger

Event 164 z400-600

1.0, 0 (no correction)

Mitigated ADC for run 5815 event 164 TPC plane 0z (APA 3: US-RaS) Beam trigger

Run 5815 event 164 2018-11-08 16:29:09.80 UTC (beam trigger)

0.9995, 3 (Dec 2018 correction)

Mitigated ADC for run 5815 event 164 TPC plane 0z (APA 3: US-RaS) Beam trigger

0.9993, 3

Mitigated ADC for run 5815 event 164 TPC plane 0z (APA 3: US-RaS) Beam trigger

Run 5815 event 164 2018-11-08 16:29:09.80 UTC (beam trigger)

0.9993, 2

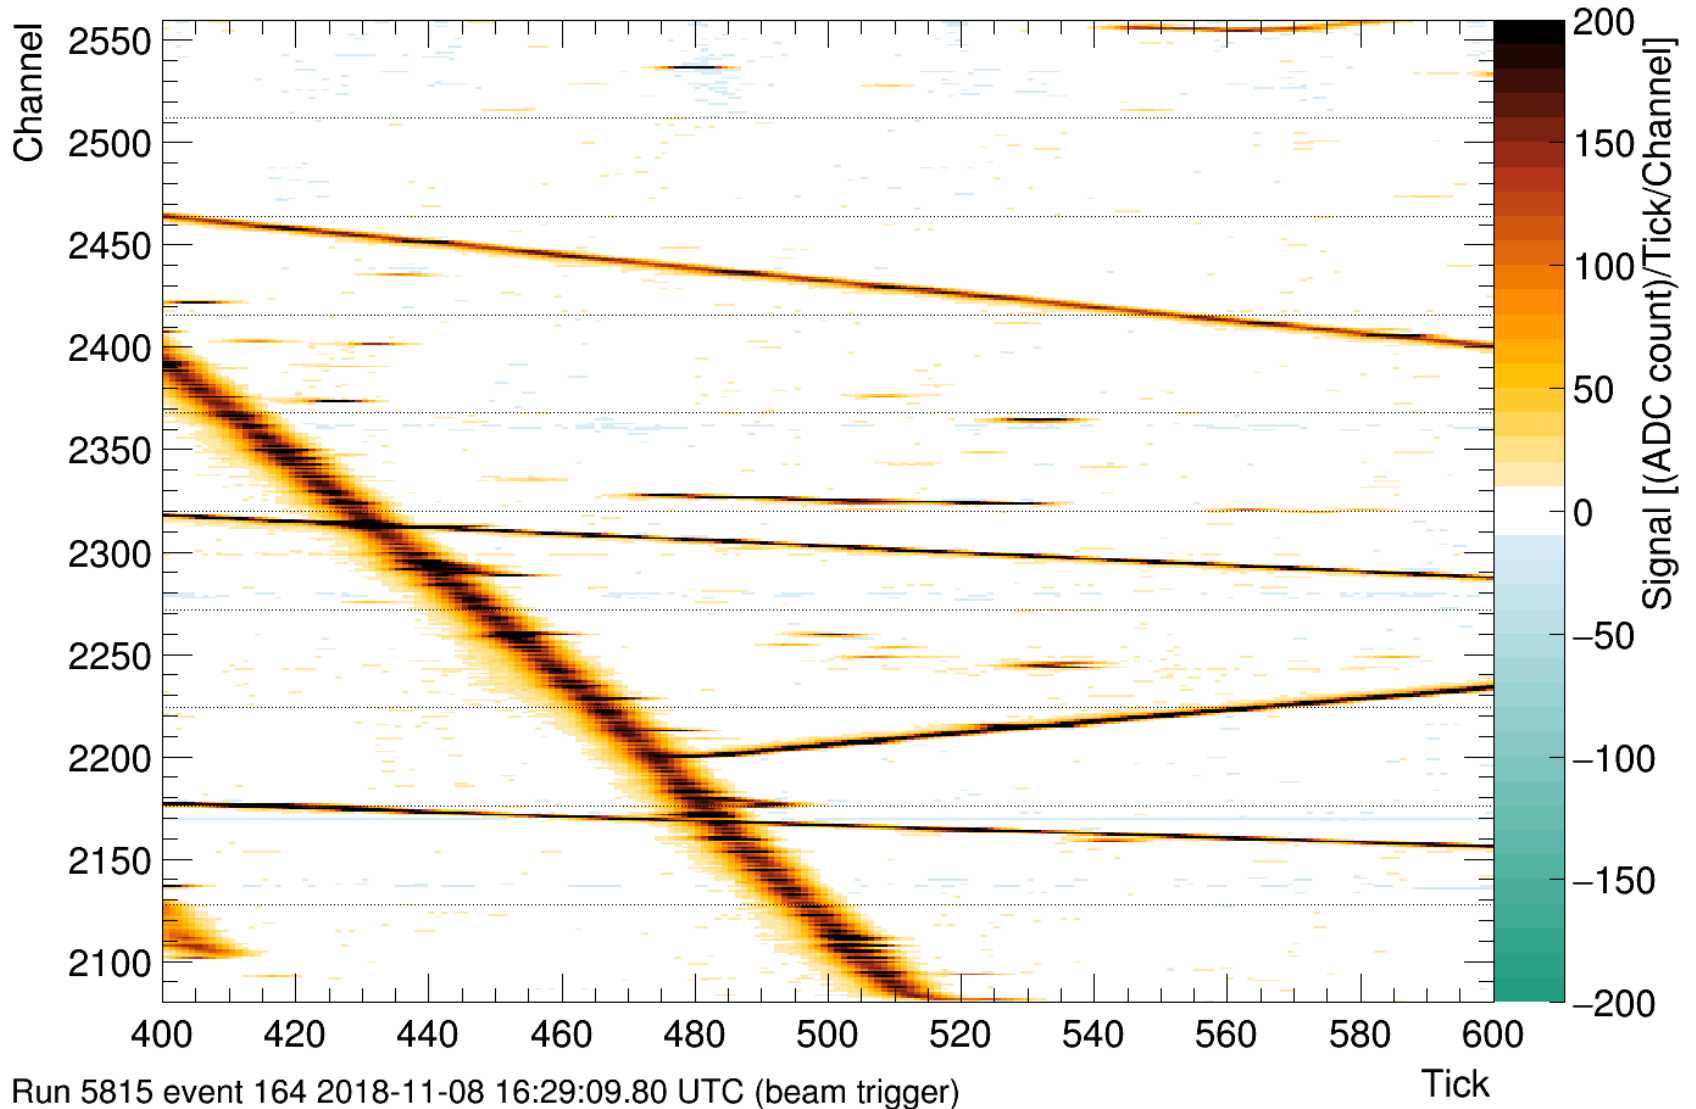

Mitigated ADC for run 5815 event 164 TPC plane 0z (APA 3: US-RaS) Beam trigger

Run 5815 event 164 2018-11-08 16:29:09.80 UTC (beam trigger)

0.9993, 1

Mitigated ADC for run 5815 event 164 TPC plane 0z (APA 3: US-RaS) Beam trigger

0.9993, 0

Mitigated ADC for run 5815 event 164 TPC plane 0z (APA 3: US-RaS) Beam trigger

Event 164 z2600-2800

1.0, 0 (no correction)

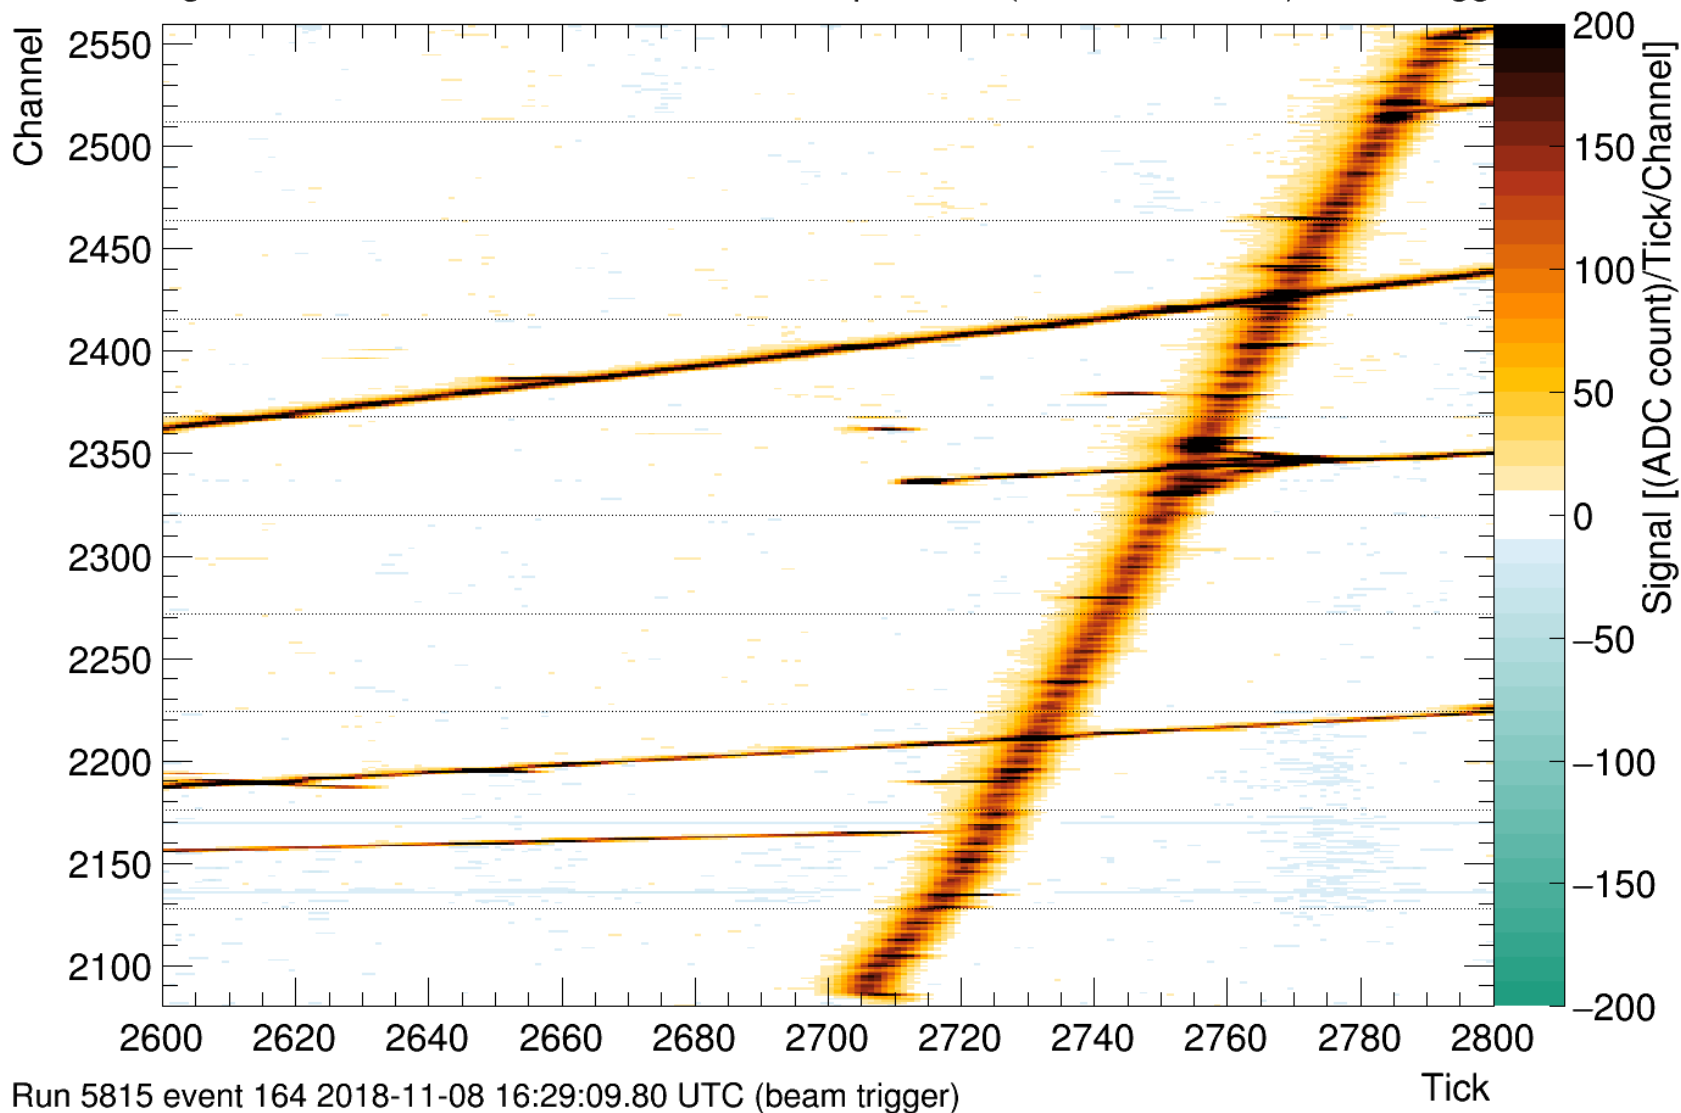

Mitigated ADC for run 5815 event 164 TPC plane 0z (APA 3: US-RaS) Beam trigger

Run 5815 event 164 2018-11-08 16:29:09.80 UTC (beam trigger)

0.9995, 3 (Dec 2018 correction)

Mitigated ADC for run 5815 event 164 TPC plane 0z (APA 3: US-RaS) Beam trigger

0.9993, 3

Mitigated ADC for run 5815 event 164 TPC plane 0z (APA 3: US-RaS) Beam trigger

0.9993, 2

Mitigated ADC for run 5815 event 164 TPC plane 0z (APA 3: US-RaS) Beam trigger

Run 5815 event 164 2018-11-08 16:29:09.80 UTC (beam trigger)

0.9993, 1

Mitigated ADC for run 5815 event 164 TPC plane 0z (APA 3: US-RaS) Beam trigger

0.9993, 0

Mitigated ADC for run 5815 event 164 TPC plane 0z (APA 3: US-RaS) Beam trigger

Event 189 z700-900

1.0, 0 (no correction)

Mitigated ADC for run 5815 event 189 TPC plane 0z (APA 3: US-RaS) Beam trigger

0.9995, 3 (Dec 2018 correction)

Mitigated ADC for run 5815 event 189 TPC plane 0z (APA 3: US-RaS) Beam trigger

0.9993, 3

Mitigated ADC for run 5815 event 189 TPC plane 0z (APA 3: US-RaS) Beam trigger

0.9993, 2

Mitigated ADC for run 5815 event 189 TPC plane 0z (APA 3: US-RaS) Beam trigger

Another run

Previous plots all for the same run 5815

- Late in beam data taking: November 8
 - Last beam run was Nov 11 (GRL)
- Events used here were taken at about the same time (see plots)

Look at another run: 5185

- Taken early, shortly after the change in the amplifier baseline
- Event displays for this run follow

Event 31 z4700-4900

1.0, 0 (no correction)

Mitigated ADC for run 5185 event 31 TPC plane 0z (APA 3: US-RaS) Beam trigger

Comments/conclusions

Without correction

- FEMB 302 is off by 5-10 ticks
- All other FEMBs look fine (only APA 3z, u, v shown here)

Old (Dec 2018) correction

- Much better but still often off by 1-2 ticks

Offset was varied using the pulser-derived rate factor of 0.9993

- Offset of 1.0 looks good and usually best
- 2.0 is sometimes similar or marginally better
- 0.0, 3.0 almost always look significantly worse
- Pulser rate factor looks good, most likely better than the old factor

Propose new default for FEMB 302 timing mitigation

- Rate factor 0.9993, offset 1.0. OK?
- In dunetpc v08_13_02

Stability

- Rate seen to be stable to much higher precision with pulser data
- Two runs here that bracket most of the beam data are consistent

Extras

Timing ratios (from last week)

Timing ratio evaluated with pulser data

- Look at peak of tickmod distribution in each event
- Plot this vs. timing clock
- Results are shown in table
- Ratio changes with time
 - Not important for reco
 - Important for pulser analysis
- Plots showing effect follow

Run	Timing ratio
Event display	0.9995
5954	0.9992875
5531 (5526, 5540)	0.9992961
6036	0.9992927
6690	0.9992930
