

DES in 10 Minutes

Monday, 10 June 2019 09:10 (15 minutes)

The Dark Energy Survey (DES) is a deep, wide-area optical imaging survey in the southern hemisphere. The unprecedented photometry from DES has allowed for exciting science results on topics ranging from cosmology to our Galaxy. I will discuss details of the survey – which completed its 5.5-year observations in January 2019 – and highlight some recent science results from the collaboration.
