

jobsub_client 1.2.10

- Jobsub_client uses pyCurl (which uses the system libcurl)
- Libcurl by default built against NSS (Network Security Services) libraries
- NSS libraries not parsing certs dir (and CRLs) correctly
- Solution: Build libcurl against openssl, not nss; package this into UPS
- Jobsub sets up UPS libcurl as a dependency
- Current since Monday, April 29. No issues so far
- All the gory details and testing:
