

Experience with POMS for analysis

Tingjun Yang

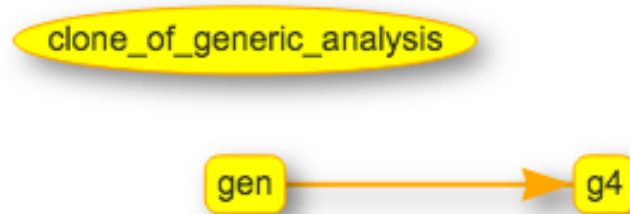

May 30, 2019

Introduction

- I have been testing POMS for analysis with the help of Marc Mengel and other experts.
- I am able to run simulation jobs (no input) using template `analysis_generator`.
- I am able to run reconstruction jobs reading files from a sam dataset definition using template `generic_analysis_job`.
 - So far I can only use US grid nodes because EOS does not accept cilogon certificate.

Things that don't work

- I added another stage (g4) to my simulation job but it does not take the files from the previous stage (gen). Emailed Marc.

- The feature of using tarball does not work.
 - ups products seemed to be setup but FW_SEARCH_PATH and FHICL_FILE_PATH did not get updated.
 - Marc is looking into this.
