Physics Community Needs, Tools, and Resources for Machine Learning

Monday, 18 July 2022 20:40 (20 minutes)

Machine learning (ML) is becoming an increasingly important component of cutting-edge physics research, but its computational requirements present significant challenges. In this poster, we discuss the needs of the physics community regarding ML across latency and throughput regimes, the tools and resources that offer the possibility of addressing these needs, and how these can be best utilized and accessed in the coming years.

In-person or Virtual?

In-person

Primary authors: GANDRAKOTA, Abhijith (Fermi National Accelerator Laboratory); RANKIN, Dylan (Massachusetts Institute of Technology); KHODA, Elham E (University of Washington); HOLZMAN, Burt (FNAL); HERWIG, Christian (FNAL); CHEN, Deming (University of Illinois at Urbana-Champaign); KATSAVOUNIDIS, Erik (MIT); KARAGIORGI, Georgia (Columbia University); DUARTE, Javier (University of California San Diego); NGADIUBA, Jennifer (FNAL); PEDRO, Kevin (Fermilab); NEUBAUER, Mark (University of Illinois at Urbana-Champaign); LIU, Miaoyuan (Purdue University); COUGHLIN, Michael (University of Minnesota); TRAN, Nhan (FNAL); HARRIS, Philip (MIT); HAUCK, Scott (University of Washington, Seattle); HSU, Shih-Chieh (University of Washington); YANG, Tingjun (Fermilab); MCCORMACK, William (MIT); FENG, Yongbin (Fermilab)

Presenter: KHODA, Elham E (University of Washington)

Session Classification: Poster Session
