International Benchmarking Pane

The International Benchmarking Panel is a HEPAP Subpanel charged by the Department of Energy and the National Science Foundation to "develop a report providing further input on possible P5 implementation strategies, particularly in the unique international context of particle physics".

Mei Bai (SLAC), Marcela Carena (FNAL), Scott Dodelson (CMU), Dan Dwyer (LBL), Tova Holmes (UTK), Andy Lankford (UCI), Wim Leemans (DESY), Sekazi Mtingwa (NRC), Tsuyoshi Nakaya (Kyoto), Brian Nord (FNAL), Ian Shipsey (Oxford), Stefan Soldner-Rembold (Manchester), Lindley Winslow (MIT), Bonnie Fleming (Yale, Co-Chair), Patricia McBride (FNAL, Co-chair), JoAnne Hewett (HEPAP Chair, ex-officio)

Particle Physics is Global

- The regions can together address the full breadth of the field's most urgent scientific questions each hosting unique world-class facilities at home and partnering in high-priority facilities hosted elsewhere.
 - Hosting world-class facilities and joining partnerships in facilities hosted elsewhere are both essential components of a continued global vision.

Enabllig-HEP-Snowmass 21 -- I. Shipsey

What is it?

How does this panel fit into the **US planning process?**

- A subpanel of HEPAP
- Builds on the Strategic Plan for **U.S. Particle Physics in the 2014** P5 report.
- Provides input to the new P5 panel

Building for Discovery

Strategic Plan for U.S. Particle Physics in the Global Context

Executive Summary

Report of the Particle Physics Project Prioritization Panel (P

May 2014

CAN THE U.S. COMPETE in Basic Energy Sciences?

CRITICAL RESEARCH FRONTIERS AND STRATEGIES

A report by the BESAC Subcommittee on International Benchmarking

The charge to HEPAP was motivated by the recent <u>BES report</u> on International Benchmarking

The flavor of the <u>BESAC</u> report leans more towards global competition.

Our charge incorporates the inherent international nature of the science that we do

"In particular, basic scientifc research, which is driven by the desire to understand fundamental principles, ofen leads to unexpected discoveries. These in turn provide the basis for innovation and technical developments: indeed, many of today's most important technologies originated in U.S. basic research from decades past. Without continued investment in basic science today, future discoveries and technological innovation will languish."

From the report by the BESAC Subcommittee on International Benchmarking

Charge to the International Benchmarking (IB) subpanel of HEPAP

U.S. Department of Energy and the National Science Foundation

Dr. JoAnne Hewett Chair, High Energy Physics Advisory Panel Theory Group, MS 81 SLAC National Accelerator Laboratory 2575 Sand Hill Road Menlo Park, California 94403

Dear Dr. Hewett:

We are grateful to the High Energy Physics Advisory Panel (HEPAP) for their many contributions to the development of the 2014 Particle Physics Project Prioritization Panel ("P5") Report, which successfully laid out a compelling research program that employed world-leading facilities and exciting new capabilities. HEPAP's 2019 review of P5 implementation demonstrated that many of the report's recommendations are being realized and the community is making excellent progress on the P5 science drivers. As we approach again a community-led "Snowmass" process to consider the most exciting particle physics opportunities for the coming decades, we think it is timely to consider more closely the unique international context of particle physics, and how we can best position the U.S. program and its researchers for success in this evolving landscape.

A core tenet of the P5 Report is that particle physics is fundamentally a global enterprise. The close connections of U.S.-based researchers to major international facilities, as well as the many international scientists conducting their research in the U.S., speak to how the enterprise of particle physics is tightly interwoven across multiple borders and time zones. Today, the international particle physics community is larger and more diverse than ever before, expanding opportunities for collaboration and partnership.

Looking to the future, we want to ensure that the U.S. continues to be a leader in particle physics internationally and remains one of the best places to conduct research, as well as preserving its ability to collaborate effectively at leading facilities hosted elsewhere. We want to be the best partner we can be for the international scientific community.

To that end, we must develop and maintain world-leading capabilities in key technologies, especially particle accelerators and detectors, as well as high performance computing; and also provide compelling, inclusive, and equitable opportunities for all those who want to explore the secrets of the universe at their most fundamental level.

Therefore, the Department of Energy and the National Science Foundation request that HEPAP develop a report providing further input on possible P5 implementation strategies, particularly in the unique international context of particle physics noted above. Specifically, we ask HEPAP to address the following questions:

J. Stephen Binkley Acting Director Office of Science U.S. Department of Energy

Sean L. Jones Assistant Director Directorate for Mathematical and Physical Sciences National Science Foundation

"it is timely to consider more closely the unique international context of particle physics, and how we can best position the U.S. program and its researchers for success in this evolving landscape"

"ensure that the U.S. continues to be a leader in particle physics internationally and remains one of the best places to conduct research, as well as preserving its ability to collaborate effectively at leading facilities hosted elsewhere. We want to be the best partner we can be for the international scientific community"

"develop and maintain world-leading capabilities in key technologies, especially particle accelerators and detectors, as well as high performance computing; and also provide compelling, inclusive, and equitable opportunities for all those who want to explore the secrets of the universe at their most fundamental level"

Charge questions **U.S.** as a Partner of Choice

there barriers that can hinder our ability to form effective and enduring international partnerships?

 How can the U.S. particle physics program maintain critical international cooperation in an increasingly competitive environment for both talent and resources? In areas where the U.S. is leading, how can we sustain our roles and attract the best international partners? In other areas, how can the U.S. build and maintain its reputation as a "partner of choice"? In general, are

Report Charge questions: Leadership roles

This may include emerging areas or opportunities that offer significant through collaborations within and beyond the HEP community?

• Identify key areas where the U.S. currently has, or could aspire to, leadership roles in High Energy Physics (HEP) via its unique or world-leading capabilities (i.e., advanced scientific facilities and tools), or leading scientific and technical resources, including highly trained personnel and supporting infrastructure. promise for leadership. To preserve and foster U.S. leadership roles within reasonable resource constraints, are there particular technical areas or capabilities that could be emphasized? Are there other technical resources and capabilities that could be leveraged in to achieve these goals, possibly

Report Charge questions: Recruit and train the best talent

among traditionally underrepresented groups within the U.S.

 How can programs and facilities be structured to attract and retain talented people? What are the barriers to successfully advancing careers of scientific and technical personnel in particle physics and related fields, and how can U.S. funding agencies address those barriers? A complete answer to these questions must address how we can ensure that we are recruiting, training, mentoring, and retaining the best talent from all over the world, including

The Panel

Benchmarking is used to measure performance using a specific indicator (cost per unit of measure, productivity per unit of measure, cycle time of x per unit of measure or defects per unit of measure) resulting in a metric of performance that is then compared to others.

Wikipedia

The Panel Members International

- - (MIT)

- Co-Chairs: Patricia McBride (FNAL), Bonnie Fleming (Yale)
- Ex-officio: JoAnne Hewett (SLAC)

Members' expertise span across areas relevant for the 2014 P5 Science Drivers

 Mei Bai (SLAC), Marcela Carena (FNAL), Scott Dodelson (CMU), Dan Dwyer (LBL), Tova Holmes (UTK), Tsuyoshi Nakaya (Kyoto), Andy Lankford (UCI), Wim Leemans (DESY), Sekazi Mtingwa (NRC), Brian Nord (FNAL), Ian Shipsey (Oxford), Stefan Soldner-Rembold (Manchester), Lindley Winslow

Panel Scope and Timing Broad charge and short timeline

This panel is not P5!

particle physics"

• Timescale for report: Deliver the report to HEPAP in the Fall 2022

• Rather we will provide input to P5 to "providing further input on possible P5 implementation strategies, particularly in the unique international context of

Panel Organization

- The work is shared among 4 sub-committees:
 - Big experiments (LHC, DUNE, Cosmic) (Chair: Andy Lankford) ullet
 - Small experiments/Instrumentation/Quantum/AI/ML (Chair: Ian Shipsey) lacksquare
 - Accelerator program (Chai: Mei Bai)
 - Workforce (Chair: Sekazi Mtingwa)

your thoughts!

Please reach out to the sub-committee chairs, or anyone on the committee to share

Panel Activities Data collection and

- areas
 - Interviewing many members of the community
 - Town Hall last week during Snowmass
 - Informal discussions
 - Collecting demographics

Submit your feedback through our <u>website</u>.

• The subcommittees are in a "data collection" phase, seeking input across all

Demographics What do we know?

- AIP Statistics
- <u>NSF/NSB</u>
- Large Collaborations
- Questions to the labs
- Universities?
- International?

Snowmass Town Hall

Lots of great feedback!

- Build on what has already come out of Snowmass
- Consider where we can "Benchmark" with comparisons to other countries/regions
- Get input from Early Career members of the community
- Attract and retain talent across all areas particularly acute in theory
- Streamline processes to enable international colleagues to collaborate in the US
- Vibrant R&D programs in the US coordinate internationally? (Your ideas here)...

Summary and Outlook What's next?

- "Particle physics is global. The evolving international context remains essential." L. Merminga
 - Theme: Collaborate and Compete!
- The panel is working to develop a description of the international (global) nature of our field and to articulate actionable recommendations.
 - Report to HEPAP in the Fall of 2022 to be able to provide input to P5.
- International collaboration is an integral part of our field. To be an attractive international partner, we need a strong vibrant program, sufficient resources and a talented workforce.
- Let's continue the spirit of Snowmass and work together to build a global vision leading to clear pathways to the best science.

Working together to achieve scientific goals is our modus operandi

Our international collaborations inspire, made up of myriad individuals with diverse interests working together to achieve scientific goals

CMS has ~4300 scientists (including 800 PhD students), engineers d technicians from 41 countries and 190 institu

We welcome your input!

Input most helpful if it comes before September 1.

International Benchmarking Panel

The International Benchmarking Panel is a HEPAP Subpanel charged by the Department of Energy and the National Science Foundation to "develop a report providing further input on possible P5 implementation strategies, particularly in the unique international context of particle physics". A link to the charge and the specific questions the Panel is to consider can be found here. The Panel will provide a report to HEPAP in the fall.

The Panel is comprised of the following experts across HEP:

Mei Bai (SLAC), Marcela Carena (FNAL), Scott Dodelson (CMU), Dan Dwyer (LBL), Tova Holmes (UTK), Andy Lankford (UCI), Wim Leemans (DESY), Sekazi Mtingwa (NRC), Tsuyoshi Nakaya (Kyoto), Brian Nord (FNAL), Ian Shipsey (Oxford), Stefan Soldner-Rembold (Manchester), Lindley Winslow (MIT), Bonnie Fleming (Yale, Co-Chair), Patricia McBride (FNAL, Cochair), JoAnne Hewett (HEPAP Chair, ex-officio)

We welcome community feedback! Please reach out to anyone on the Panel to express your thoughts and views on our charge.
