

Snowmass Industry session – possible questions

- If your company tracks the major computing challenges in high energy physics (HEP) experiment and theory, what do you consider them to be?
- Is there a way for the HEP community to interact with your company regarding the challenges that we see and how to surmount them?
- When will Moore's law hit limits and how will the industry respond?
- How will programming models evolve or new models emerge?
- How will new memory and integration technologies change system designs (3D memory, non-volatile) ?
- What impact will silicon photonics have?
