# LBNC

- The LBNC had a meeting on Thursday-Saturday (past week)
- All the slides from the meeting are available on [the LBNC pages](#)
- The meeting focused on the dual phase detector, but we were asked to give an update on the status of the electronics in a parallel session
- Report on
  - Progress with all the ASICs
  - Preparation for system tests (new FEMBs, cold box at CERN, ICEBERG)
- One recommendation (report from committee was not fact checked, it contains one error, to be fixed)
  - A full postmortem on the ICEBERG “event” should be completed and lessons learned be incorporated into procedures associated with cold electronics and chambers.

# Preliminary Design Reviews

- We have one preliminary design review planned for February 5-7 at CERN: ASICs and FEMBs
  - The people who should attend this review have been informed (more E-mails this week)
  - The charge for the review is available in [Indico](#)
  - An agenda for the review and detailed instructions for the documentation for the review will be circulated this week
  - All documentation should be made available within the consortium by January 17, we will review it and post it for the committee by January 24
  - Transparencies for the presentations should be available by January 24, finalized by January 21
- A review of the system aspects (including the WIB/PTC, power distribution, cabling) is tentatively scheduled for March 10-12

# FNAL/DOE reviews

- Fermilab has scheduled a director's review of the LBNF/DUNE project for April 28-May 1
- In preparation for the DOE IPR scheduled for July 14-16
- With the goal of a CD-2 review in the Fall
  
- Too many reviews, too little time for real work....

# Conferences

- Is anybody interested in attending [TIPP 2020](#) (24-29 May, Whistler, BC) and giving a presentation on the progress with the single phase TPC electronics ?
- We could think of multiple abstracts (experience with ProtoDUNE, status of various ASIC design and testing)
- We do not plan on submitting abstracts, but if you are interested we would like to see the abstracts before submission (deadline December 20)
- Similarly for the [APS Spring Meeting](#) (abstract submission deadline January 8)
