

ICARUS Technical Documentation & manuals' readiness

D. Torretta

ICARUS WA104 meeting

12-11-2019

Status

Documentation:

- The Web site Internal pages “icarus-exp.fnal.gov” are being updated with documentation provided by the WGs
 - The writing and content of said documents is up to the WGs
 - The repositories can be DocDB, Indico, Wiki’s, Archives....
- The **Operations page has been updated with link to the Room Control Room Wiki**, <https://cdcv.s.fnal.gov/redmine/projects/icarus-operations/wiki/Wiki> , as mentioned in the earlier Control Room’s talk
 - All documents listed therein (experts contact list, manuals, shifts schedule) will be available and accessible via the Web site
- General clean up and re-organization of topics is underway

Manual(s) for shifters:

- Claudio provided a **draft manual for shifter’s duties during cool down**
 - the draft will be updated with missing sections and be ready for review by the end of this week
 - electronic and printed form (in ROC West) will be made available
- As far as I know, **most manuals or Wiki pages, either for shifters or experts, are still missing**
 - But some are being written (DAQ Wiki, TPC A2985 operating manual ...)
 - We encourage the WG experts to start or continue writing them
 - They need to be vetted/tested before we start shifts
- Lot of work to be done to be ready ! Please contribute.
