

DocDB FAQ for LBNF and DUNE

Anne Heavey

January 29, 2020

This should answer the following questions:

- How come I click on this link and it doesn't work?
- How come I can't see this document? I know it's there!
- What permissions do I give my document?

Cert/SSO Door into DocDB

Private
(username/password)
Door into DocDB

Cert/SSO Door into DocDB

<https://docs.dunescience.org/cgi-bin/sso/...>

Shoot, I know that I can use either "dune" or "lbnfpm" with the right password, but this link wants something different...

I don't know or care about any usernames or passwords. But if you get SSO set up, you can get through this door!

Private (username/password) Door into DocDB

<https://docs.dunescience.org/cgi-bin/private/...>

I have SSO set up. Why are you asking me for a username and password?

I don't know or care about your SSO. You have to give me a username and password to get through this door!

▲ Far Site Conventional Facilities Monthly Reports (for the CD)

FSCF CD-3a Change Request Log

FSCF CD-3a Corrective Action Log and VARs (by Control Acct.)

FSCF CD-3a EVMS Analysis Report

I'm on a review site, but I'm also in DocDB with my SSO. I don't want to bother with a username and password!

The easiest thing is to mouse over the link and note the DocDB number – here it's 3138 -- then go to your open DocDB session and just type it in!

<https://docs.dunescience.org/cgi-bin/private/RetrieveFile?docid=3138&extension=xlsx&asof=2019-10-09>

Ok, I tried that, but I still can't get to it!

Are you sure you have the right permissions to view it? You have to have cam or something that includes cam. (We don't set anybody's SSO to a particular review access group.)

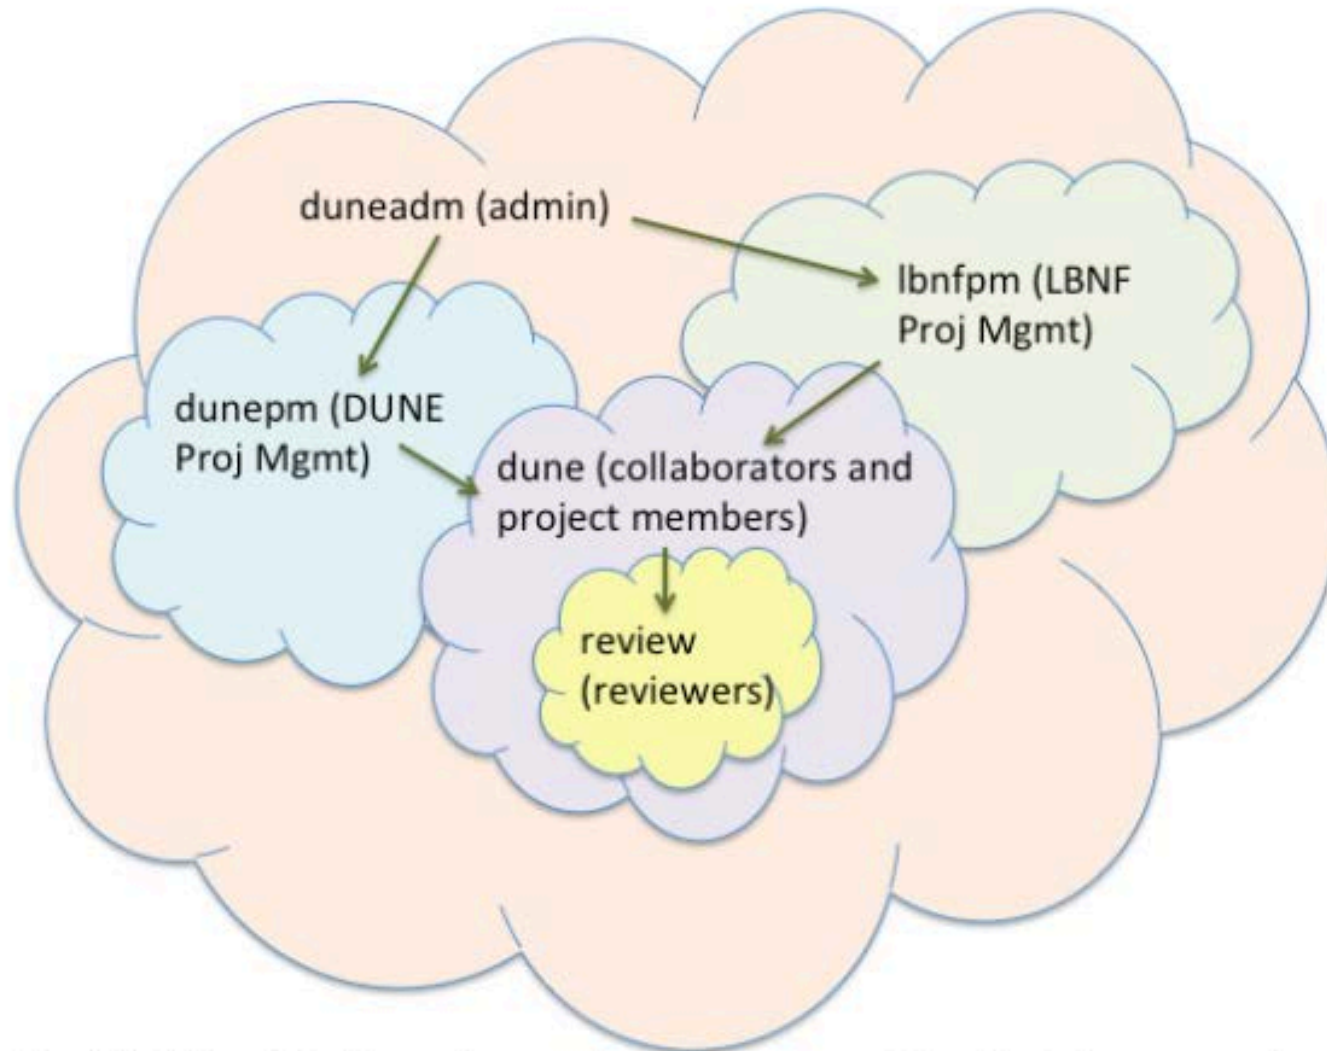

Viewable by:

- [cam](#)
- [iproct2019](#)

No, I just have dune. But what do you mean "something that includes cam"?

In the DUNE DocDB, *duneadm* can do and see everything that *dunepm* and *lbnfpm* can; *dunepm* and *lbnfpm* can do and see everything that *dune* can, and so on. This shows only a subset of defined usernames in the DUNE DocDB.

I use access groups (each associated with a shared username) that are structured hierarchically, with “dominant” and “subordinate” groups.

It's helpful to know that the groups *dunepm* and *lbnfpm* are both dominant to *dune*.

Thanks! Now I want to add a document, but it's got some sensitive information in it. How should I set the permissions?

How sensitive? Ok for CAMs? Is it for a review? If so, set permissions like this...

Viewable by:

- [cam](#)
- [iproct2019](#)

Modifiable by:

- [lbnfpm](#)

If it's for project management only, set it to ONLY lbnfpm for both "Viewable by" and "Modifiable by".

Often procurement documents need even stricter permissions, like this...

Viewable by:

- [lbnfpm](#)
- [procurement](#)

Modifiable by:

- [procurement](#)

Set normal, everyday documents to dune. Note that if you include dune, you don't need lbnfpm or config because they're both dominant to dune ...

Viewable by:

- [dune](#)
- [lbnfpm](#)
- [config](#)

Modifiable by:

- [dune](#)
- [lbnfpm](#)
- [config](#)

How do I know which access groups are dominant to which others?

Well, lbnfpm is dominant to most things you'll need. Exceptions are procurement, config, and individual review access groups.

But if you're not sure about something, ask your friendly DocDB admin!

Links into DocDB can vary in other ways

- Remember:
 - docs.dunescience.org/cgi-bin/sso... is for SSO access and
 - docs.dunescience.org/cgi-bin/private... is for username password.
- More...
 - [...ShowDocument?docid=nnnn](https://docs.dunescience.org/...ShowDocument?docid=nnnn) takes you to the DocDB entry
 - [...RetrieveFile?docid=nnnn&filename=\[filename.ext\]](https://docs.dunescience.org/...RetrieveFile?docid=nnnn&filename=[filename.ext]) takes you straight to the file;
 - It may pull it up or it may download it.
 - This depends on what type of file it is and your browser settings.
 - [...RetrieveFile?docid=nnnn&extension=nnn](https://docs.dunescience.org/...RetrieveFile?docid=nnnn&extension=nnn) takes you straight to the file in that entry with the given extension.
 - There must be only one file with that extension for that docdb number!
 - Add on [&version=n](#), or
 - [&asof=yyyy-mm-dd](#).

A final word...

And thanks!

Please help keep
the DUNE DocDB

- Give documents and files meaningful names. Follow naming conventions when given.
- Add both product and source files, e.g., PDF and Word (uncheck “Main” for source files).
- The typical setting for both “View” and “Modify” is “dune,” but *know thy audience!*
